Photonic technologies and subsystems for terabit communications

A.J. Seeds. "Photonic technologies and subsystems for terabit communications." 1999 MTT-S International Microwave Symposium Digest 99.2 (1999 Vol. II [MWSYM]): 615-618 vol.2.

This paper reviews photonic technologies for providing terabit/s capacity communication networks. Recent advances in optical frequency synthesis techniques for high density wavelength division multiplex systems and in the use of optical non-linear elements in high capacity (>1 Tb/s.Mm) long haul systems are also described.
