

## FOREWORD

A hearty welcome is extended to all of you attending the 1966 G-MTT International Microwave Symposium. With considerable effort on the part of the Program Committee, a full and exciting four day program is presented. Invited speakers and guests will give a truly international breath and technical depth to the coverage. However, the true core of a scientific symposium lies in the new and unpublished work to be presented in the contributed papers.

This year marks the close of the third decade of continuous and strong effort in the microwave field in this community. The culmination of one single stream of endeavor is represented by the ensuing completion of the Stanford Linear Accelerator --- a task of great magnitude and scientific promise. It is hoped that you will find time to tour this activity.

This is the second Microwave Symposium to be held in the San Francisco Bay Area. We are proud to be your hosts. We hope that you will spend a rewarding four days at the Symposium and we invite you to extend your stay to some visits to the numerous local laboratories engaged in microwave activities.

Please call on any local G-MTT members for any assistance in making your stay rewarding and enjoyable.

Peter Lacy  
Steering Committee Chairman  
1966 G-MTT International Symposium
