

Session Z:

Merging of Optical and Microwave Techniques

Chairman: H. Sobol
University of Texas
Arlington, TX

This session has five papers which address the joint usage of microwave and optical technology. The interaction of optical signals with microwave energy to realize microwave control components is discussed in two of the papers. This emerging area is expected to take on increasing importance in the microwave area.

A small graphic element consisting of a black rectangle with a vertical white line on its right side, and a white letter 'Z' positioned to the right of the line.
