

Session OF-I

Open Forum I

OF-I

Co-chairmen:

Ross Hicks

Compact Software
Paterson, NJ

Geoff Dawe

M/A-COM ASD
Lowell, MA

This year's open forum has approximately 25 high quality papers per session. Each session will be kicked off by a regular presentation to be given by a prominent researcher. For this session it will be Dr. Stephen Maas with a presentation on intermodulation distortion modeling. After a few brief questions, the session will then transition into the poster session, with topics covering such areas as superconductivity, GaAs monolithic circuits, non-FET solid state devices, measurements, high power issues, millimeter wave and sub-millimeter wave circuits, ferrites, communications, and biological effects being presented.

2:30 p.m.–5:00 p.m., Tuesday, June 11, 1991
Rooms 304-306
