Lowell, MA

OF-II

This years open forum sessions contain approximately twenty-five high quality papers per session. Each session will be kicked-off by a regular presentation to be given by a prominent researcher. For this session it will be Dr. Michael Steer with a presentation on Simulation of Nonlinear Microwave Circuits. After a few brief questions, the session will transition into the poster session. The topics covered in the second session include: CAD, Solid State FET Circuits, Filters, Passive Circuits, Field Theory and Guided Waves.

2:30 p.m.–5:00 p.m., Wednesday, June 12, 1991
Rooms 304-306
