

Session EE

CAD Modeling for Transmission Structures

Chairman:

K.C. Gupta

University of Colorado at Boulder
Boulder, CO

Single and multiple conductor line form the basic building block for a number of components in MICs. Their characterization is also important for analysis of interconnections in high speed digital circuits. Accordingly, this session deals with frequency domain and time domain analysis of transmission structures. Techniques for characterization of dispersion and other effects are emphasized.

8:30 a.m.–10:00 a.m., Thursday, June 13, 1991
Ballroom C
