

Session BB

(Focused Session)

Submillimeter-Wave Systems

Chairman:

D. Rutledge

Caltech
Pasadena, CA

This session focuses on technology for submillimeter-wave systems. There have been extremely interesting recent advances in oscillators, schottky diodes, integrated-circuit antennas, superconductor-insulator-superconductor (SIS) receivers, and multipliers. The prospects for high-performance submillimeter-wave systems in radio-astronomy, satellite communications, and remote sensing are reviewed.

3:00 p.m.–4:20 p.m., Wednesday, June 3, 1992
Brazos
