

Session FF

(Special Session)

Selected Russian Microwave Technologies

Chairman:

G. W. Ewell

Georgia Tech Research Institute
Atlanta, GA

This session provides five presentations by engineers and scientists from Istok, a leading Russian microwave R&D facility originally founded in 1943 to produce receiver tubes, but which now produces a wide variety of both vacuum and solid-state devices at microwave and mm-wave frequencies. The presentations will include an overview of current R&D activities, past and present developments and applications of multiple-beam microwave and mm-wave tubes and low noise amplifiers, and achievements in fabrication and applications of solid-state devices.

3:30 p.m.–5:00 p.m., Wednesday, June 16, 1993
Room 205
