

Session C

(Special Session)

Intelligent Vehicle Highway Systems (IVHS)

Chairman:

Richard A. Sparks

Anro

Lexington, MA

The IVHS program is a unique public-private partnership of government, university and private sector participants. The program addresses the use of advanced technology to improve surface transportation crucial to US efforts to relieve congestion, prevent accidents, conserve fuel and enhance the environment. IVHS applies the technologies of communications, control, electronics and computer hardware and software to both vehicles and infrastructure to improve the safe, expeditious and economic movement of people and goods. IVHS is becoming the principal element of many surface transportation plans.

11:00 a.m.–12:00 p.m., Tuesday, June 15, 1993
Room 216/217
