Raytheon Company

WE	
2D	

The wireless technology for personal communications is a rapidly growing field. This focused session discusses several novel aspects of devices and circuits developed for this application. Si bipolar, GaAs MESFET, and heterostructure device technologies and their application in wireless personal communication systems are discussed in this session.

10:30 a.m.–12:00 p.m., Wednesday, May 17, 1995
Room A3
