

Session WE3A

Power Amplifiers for Wireless Applications

Chairman:

R.E.S. Bryan

Ericsson, Incorporated

This session highlights the continuing progress the microwave industry is making to satisfy the demands of commercial communications. The power amplifiers needed for wireless applications must provide power and high efficiency at low bias voltages and very low cost. Technology advances in Si and GaAs amplifiers will be presented which will address these needs over the 900 and 1800 MHz frequency bands for analog and digital cellular phones.
