

Session: TH1B

TH	
1B	

Quasi-Optical Modulators and Oscillators

Chair

L. Dunleavy

Univ. of South Florida

Co-Chair

Z. Popovic

Univ. of Colorado

Progress in building blocks for useful quasi-optical systems is the focus of this session. Specifically, several types of modulators have been demonstrated: a MPSK PLL modulator, digital phase loaded active array modulators, and optically controlled modulators. Analysis methods for optimizing active arrays have also advanced. Several oscillator papers show good progress in millimeter-wave power combiners.

**8:00 am - 9:50 am Thursday, June 20, 1996
Room 132**
