

Session: WE1B

**TLM Modeling of Microwave
Structures**

Chair

R. Vahldieck

University of Victoria

Co-Chair

P. Russer

Inst.F. Hochfrequenz Technik

New developments in the time and frequency domain TLM methods are described. The developments focus mainly on new modes with lower dispersion error, multi-grid methods for better space resolution and hybridization of the TLM method to reduce computational space.

**8:00 am - 9:50 am Wednesday, June 19, 1996
Room 132**
