

Session: WE4D

**Commercial and Space Microwave
System Applications**

Chair

A. Katz

Trenton State College

Co-Chair

J.K. McKinney

Dura Sales

Microwave systems have moved from an era when applications were primarily high in cost and almost exclusively focused on military government uses. Today, large volume low cost commercial applications dominate the microwave market. One exception is the growth of microwave space-related systems. This session is in keeping with these trends and present a variety of innovative microwave system applications. Two papers deal with low cost commercial systems, while others deal with space related hardware.
