

## Publication Plans of the PGMTT

With this issue, the PGMTT embarks on a new publication policy. For our regular issues, which will be published in January, April, July and October, we will use the same style type and format used in the PROCEEDINGS. Periodically, we will publish such special issues as appear necessary to keep us well informed. The first of these will be the Special Issue on the Microwave Strip Circuits Symposium held at Tufts College, October 11–12, 1954.

In our regular issues, we will include pictures and biographies of the authors. Also, in each of our regular issues, we shall feature a biography, picture and editorial comment from one of our more eminent members. In this issue we are particularly proud to present Dr. George C. Southworth.

Another new feature is our Correspondence Section. We hope that this will encourage members to write their comments, ideas, or news items to the Chairman for publication.

Papers may be submitted for consideration not only to the Committee Chairman, but also to W. L. Pritchard, Raytheon Manufacturing Company, Newton, Mass., and H. Jasik, 61 Second Street, Mineola, N. Y. These two gentlemen and certain other individuals on the engineering staff at Sylvania Electric in Woburn, Mass., have been kind enough to act as editorial readers.
