on

Microwave Theory and Techniques

Published by the Professional Group on Microwave Theory and Techniques

Volume MTT-4

October, 1956*

Number 4

12

TABLE OF CONTENTS

Foreword *Richard F. Schwartz* 192

CONTRIBUTIONS

Nonuniform, Inhomogeneous, and Anisotropic Waveguides *Ralph W. Klopfenstein* 193

Open Wire Lines *Georg Goubau* 197

Rectangular and Ridge Waveguide *Tore N. Anderson* 201

A Broad-Band Microwave Circulator *Edward A. Ohm* 210

The Excitation of Surface Waveguides and Radiating Slots by Strip-Circuit Transmission Lines
 *A. D. Frost, C. R. McGeoch, and C. R. Mingins* 218

The Turnstile Circulator *Philip J. Allen* 223

Nonreciprocal Two-Ports Represented by Modified Wheeler Networks . . *H. M. Altschuler and W. K. Kahn* 228

Criteria for the Design of Loop-Type Directional Couplers for the L Band
 *P. P. Lombardini, R. F. Schwartz, and P. J. Kelly* 234

Improved Rectangular Waveguide Resonance Isolators *Max T. Weiss* 240

An Automatic Gain Control System for Microwaves *Jorgen P. Vinding* 244

A Method of Analysis of Symmetrical Four-Port Networks *J. Reed and G. J. Wheeler* 246

Broad-Band Waveguide Series *T* for Switching *J. W. E. Griemsmann and G. S. Kasai* 252

A Traveling-Wave Directional Filter *Franklin S. Coale* 256

Miniaturization of Microwave Assemblies *L. Lewin* 261

Recent Advances in Finline Circuits *Sloan D. Robertson* 263

Recent Advances in Waveguide Hybrid Junctions *Patricia A. Loth* 268

Contributors 271

* This Special Issue takes the place of the regular October issue.
