INFORMATION FOR AUTHORS

Submitting Manuscripts for Publication

Manuscripts for review should be submitted in pdf format as an email attachment to the Editor, David Rutledge, at **TMTTeditor@ieee.org**. I will respond as quickly as I can to your submissions, but there may be significant delays because of the volume of email, and other commitments. If you would like to get an automatic acknowledgment that your message has been received, please put the phrase MTTACK at the end of the Subject line. Please make the pdf file with a word-processing program or by converting a printer file, rather than by scanning. The maximum file size is 1 MB. All fonts must be embedded in the file. Each manuscript must include an abstract of 200 words or less. The manuscript should be formatted so that is easy to read on either a computer screen or on paper printed out in black and white. The manuscript should be single-spaced and single-column, with figures and captions at the appropriate place within the text, rather than at the end. Figures should be large enough to be easily viewed on a computer screen. Label axes carefully and use large lettering. Instrument screen dumps and screen photos should be redrawn to make them clear. Plot theory and experiment on the same graph so that they can be compared easily. Shading and color should be avoided for the reviewers who print the manuscripts. TeX and LaTeX users need to use scalable fonts rather than bitmapped fonts, so that the pdf file can be read easily on a computer screen. If you have difficulty making the pdf file, please contact Dale Yee at **dale@caltech.edu**.

Manuscripts are considered as regular papers or letters. Letters are limited to errata and comments on previously published material. Manuscripts that describe simulations of circuits without validating measurements may be returned without reviews. The author must notify the editor at the time of submission if the paper contains material that has been previously submitted for publication. We will consider papers that are related to material published in conference digests only if the paper is substantially expanded. Please attach pdf files for the previous papers also.

Page Charges

Papers will be reviewed for their technical merit, and decisions to publish will be made independently of an author's ability to pay page charges. Page charges of $110 (U.S.) per printed page will be assessed on papers of five printed pages or less. Overlength page charges of $200 per page are mandatory for each page in excess of five pages. If the author's organization agrees to honor the total page charge, which includes the page charges on the first five pages plus the mandatory overlength charge, the author will receive 100 reprints. If the supporting organization honors only the mandatory charge, no free preprints will be sent.

Copyright and Clearance

It is the policy of the IEEE to own the copyright to the technical contributions it publishes. To comply with the IEEE copyright policy, authors are required to sign an IEEE Copyright Form before publication. The IEEE must assume that material submitted to its publications is available for general dissemination. It is the responsibility of the author, not the IEEE, to determine whether disclosure of the material requires prior consent of other parties and, if so, to obtain it.
