MICROWAVE AND WIRELESS COMPONENTS LETTERS®

A PUBLICATION OF THE IEEE MICROWAVE THEORY AND TECHNIQUES SOCIETY

NOVEMBER 2003

VOLUME 13

NUMBER 11

IMWCBJ

(ISSN 1531-1309)

LETTERS

A -119.2 dBc/Hz at 1 MHz, 1.5 mW, Fully Integrated, 2.5-GHz, CMOS VCO Using Helical Inductors	457
Large Q-Factor Improvement for Spiral Inductors on Silicon Using Proton Implantation	460
Measured Propagation Characteristics of Coplanar Waveguide on Semi-Insulating 4H-SiC Through 800 K	463
Theoretical Verification on the Effect of an Additional DR in Push-Push FET DROs	466
Convergence of FDTD and Wavelet-Collocation Modeling of Curved Dielectric Interface With the Effective Dielectric Constant Technique	469
Package Macromodeling via Time-Domain Vector Fitting	472
The Unconditionally Stable Pseudospectral Time-Domain (PSTD) Method	475
A K-Band InGaP/GaAs HBT Balanced MMIC VCO	478
Circular-Pad via Model Based on Cavity Field Analysis	481
Experimental Demonstration of the Effect of Groove Shape on the Wave Properties of the Helical Groove Waveguide.	484
Integrated Antennas on Si With Over 100 GHz Performance, Fabricated Using an Optimized Proton Implantation Process	487
A Reconfigurable Slot Antenna With Switchable Polarization	490
Measurement of Intermediate Frequency Bandwidth of Hot Electron Bolometer Mixers at Terahertz Frequency Range	493

ANNOUNCEMENT

First Call for Papers—7th International Workshop on Finite Elements for Microwave Engineering Antennas, Circuits, and Devices	496
