

CONTENTS

Detached eddy simulation of flow and heat transfer in fully developed rotating internal cooling channel with normal ribs A.K. Viswanathan and D.K. Tafti	351
Large eddy simulation of turbulent heat transfer in a rotating square duct Z. Qin and R.H. Pletcher	371
Comparison of zonal RANS and LES for a non-isothermal ribbed channel flow Y. Liu, P.G. Tucker and G. Lo Iacono	391
Large-eddy simulation of a round jet in a cross-flow P. Majander and T. Siikonen	402
POD of vorticity fields: A method for spatial characterization of coherent structures R. Gurka, A. Liberzon and G. Hetsroni	416
A comparative study of numerical models for Eulerian–Lagrangian simulations of turbulent evaporating sprays D.I. Kolaitis and M.A. Founti	424
Drag reduction by gas injection into turbulent boundary layer: Density ratio effect P.V. Skudarnov and C.X. Lin	436
Turbulence characteristics of natural-convection boundary layer in air along a vertical plate heated at high temperatures Y. Hattori, T. Tsuji, Y. Nagano and N. Tanaka	445
Lattice-Boltzmann modelling of natural convection in an inclined square enclosure with partitions attached to its cold wall A. Mezrhab, M. Jami, C. Abid, M. Bouzidi and P. Lallemand	456
Natural convection in differentially heated and partially divided square cavities with internal heat generation H. Oztop and E. Bilgen	466
Turbulent natural convection in an air-filled isosceles triangular enclosure E.H. Ridouane, A. Campo and M. Hasnaoui	476
Transition from gravity- to inertia-dominated behavior computed for the turbulent stably-stratified filling of an open enclosure Y. Ji and K.O. Homan	490
Effect of swirl on pure turbulent thermal plume development M.V. Pham, F. Plourde and S. Doan Kim	502
An experimental study of flow boiling in a rectangular channel with offset strip fins B. Kim and B. Sohn	514
Investigations of flow characteristics in a plate fin and tube heat exchanger model composed of single cylinder B. Şahin, A. Akkoca, N.A. Öztürk and H. Akilli	522
Acknowledgment of reviewers	531
