

CONTENTS

Influence of hole shape on the performance of a turbine vane endwall film-cooling scheme W. Colban and K. Thole	341
Influence of duct aspect ratio on heat/mass transfer in coolant passages with rotation K.M. Kim, Y.Y. Kim, D.H. Lee, D.H. Rhee and H.H. Cho	357
Potential of flow pre-whirl at the compressor inlet of automotive engine turbochargers to enlarge surge margin and overcome packaging limitations J. Galindo, J.R. Serrano, X. Margot, A. Tiseira, N. Schorn and H. Kindl	374
Modelling the mean temperatures used for calculating heat and mass transfer in sprays A.P. Watkins	388
The evaporation of a saturated porous layer inside an inclined airflow channel Y. Chou and R.-J. Yang	407
Computations of a turbulent wake in a strong adverse pressure gradient M.J. Tummers, K. Hanjalić, D.M. Passchier and R.A.W.M. Henkes	418
Application of linear and non-linear low- Re $k-\epsilon$ models in two-dimensional predictions of convective heat transfer in passages with sudden contractions M. Raisee and S.H. Hejazi	429
Experimental study of turbulent cross-flow in a staggered tube bundle using particle image velocimetry S.S. Paul, M.F. Tachie and S.J. Ormiston	441
Mixed convection heat transfer to and from a horizontal cylinder in cross-flow with heating from below G.M. Laskowski, S.P. Kearney, G. Evans and R. Greif	454
Natural convection air-cooling of a substrate-mounted protruding heat source in a stack of parallel boards G. Desrayaud, A. Fichera and G. Lauriat	469
Natural convection around a horizontal solid cylinder wrapped with a layer of fibrous or porous material M.A. Saada, S. Chikh and A. Campo	483
Buoyancy suppression in gases at high temperatures M.A. Kuczmarski and S.A. Gokoglu	496
Modeling pressure drop of inclined flow through a heat exchanger for aero-engine applications D. Missirlis, K. Yakinthos, P. Storm and A. Goulas	512
Flow pattern assessment in tubes with wire coil inserts in laminar and transition regimes A. García, J.P. Solano, P.G. Vicente and A. Viedma	516
Optimal theoretical design of 2-D microscale viscous pumps for maximum mass flow rate and minimum power consumption A.K. da Silva, M.H. Kobayashi and C.F.M. Coimbra	526
Acknowledgment of reviewers	537
