

## CONTENTS

### The Fifth International Symposium on Turbulence and Shear Flow Phenomena (TSFP5)

|                                                                                                                       |     |
|-----------------------------------------------------------------------------------------------------------------------|-----|
| Preface                                                                                                               |     |
| R. Friedrich, T.B. Gatski and F.W. Schmidt                                                                            | 567 |
| Effects of an adverse pressure gradient on a turbulent boundary layer                                                 |     |
| J.-H. Lee and H.J. Sung                                                                                               | 568 |
| Large-eddy simulation of supersonic turbulent flow in axisymmetric nozzles and diffusers                              |     |
| S. Ghosh, J. Sesterhenn and R. Friedrich                                                                              | 579 |
| Spatio-temporal turbulent structures of thermal boundary layer subjected to non-equilibrium adverse pressure gradient |     |
| T. Houra and Y. Nagano                                                                                                | 591 |
| Turbulent structures and statistics in turbulent channel flow with two-dimensional slits                              |     |
| S. Makino, K. Iwamoto and H. Kawamura                                                                                 | 602 |
| Direct numerical simulation of a separation bubble on a rounded finite-width leading edge                             |     |
| E. Lamballais, J. Silvestrini and S. Laizet                                                                           | 612 |
| Implicit LES applied to zero-pressure-gradient and adverse-pressure-gradient boundary-layer turbulence                |     |
| S. Hickel and N.A. Adams                                                                                              | 626 |
| Application of a local SGS model based on coherent structures to complex geometries                                   |     |
| H. Kobayashi, F. Ham and X. Wu                                                                                        | 640 |
| Large-eddy simulation of variable-density turbulent axisymmetric jets                                                 |     |
| P. Wang, J. Fröhlich, V. Michelassi and W. Rodi                                                                       | 654 |
| Study of scalar macro- and microstructures in a confined jet                                                          |     |
| N. Kornev, V. Zhdanov and E. Hassel                                                                                   | 665 |
| Near-field dynamics of a turbulent round jet with moderate swirl                                                      |     |
| Y. Maciel, L. Facciolo, C. Duwig, L. Fuchs and P.H. Alfredsson                                                        | 675 |
| Modelling of three-dimensional jet array impingement and heat transfer on a concave surface                           |     |
| T.J. Craft, H. Iacovides and N.A. Mostafa                                                                             | 687 |
| Shearless and sheared flow past a circular cylinder: Comparative analysis by means of LES                             |     |
| T. Omori, S. Jakirlić, C. Tropea and S. Obi                                                                           | 703 |
| Direct and large eddy simulations of a bottom Ekman layer under an external stratification                            |     |
| J.R. Taylor and S. Sarkar                                                                                             | 721 |
| Dispersion of a vertical jet of buoyant particles in a stably stratified wind-driven Ekman layer                      |     |
| R. Inghilesi, V. Stocca, F. Roman and V. Armenio                                                                      | 733 |
| Analysis and modelling of the turbulent diffusion of turbulent heat fluxes in natural convection                      |     |
| L. Chandra and G. Grötzbach                                                                                           | 743 |
| Numerical analysis of blood flow in realistic arteries subjected to strong non-uniform magnetic fields                |     |
| S. Kenjereš                                                                                                           | 752 |

*Continued*

|                                                                                                                                            |     |
|--------------------------------------------------------------------------------------------------------------------------------------------|-----|
| Systematic analysis of high Schmidt number turbulent mass transfer across clean, contaminated and solid interfaces                         |     |
| Y. Hasegawa and N. Kasagi                                                                                                                  | 765 |
| The effects of swell on turbulence over wavy walls                                                                                         |     |
| R. Kurose, T. Imashiro and S. Komori                                                                                                       | 774 |
| Drag reduction by dimples? – A complementary experimental/numerical investigation                                                          |     |
| H. Lienhart, M. Breuer and C. Köksoy                                                                                                       | 783 |
| Measurement of fine scale structure in turbulence by time-resolved dual-plane stereoscopic PIV                                             |     |
| M. Tanahashi, T. Hirayama, S. Taka and T. Miyauchi                                                                                         | 792 |
| Geometric sensitivity of three-dimensional separated flows                                                                                 |     |
| E.M. Cherry, C.J. Elkins and J.K. Eaton                                                                                                    | 803 |
| Unsteady wall pressure field of a model A-pillar conical vortex                                                                            |     |
| C. Hoarau, J. Borée, J. Laumonier and Y. Gervais                                                                                           | 812 |
| Turbulence structural measurements using a comprehensive laser–Doppler velocimeter in two- and three-dimensional turbulent boundary layers |     |
| K. Todd Lowe and R.L. Simpson                                                                                                              | 820 |
| Dynamic wall-shear stress measurements in turbulent pipe flow using the micro-pillar sensor MPS <sup>3</sup>                               |     |
| S. Große and W. Schröder                                                                                                                   | 830 |
| DNS and LES of estimation and control of transition in boundary layers subject to free-stream turbulence                                   |     |
| A. Monokrousos, L. Brandt, P. Schlatter and D.S. Henningson                                                                                | 841 |
