

## Subject Index

- Acetophenone derivatives  
Stereoinversion of 1-arylethanols by *Cyanidioschyzon merolae* NEIS-1332 19
- Adsorption  
Partition of enzymes between the solvent and insoluble substrate during the hydrolysis of lignocellulose by cellulases 42
- Alcohol dehydrogenase  
Characterization of novel alcohol dehydrogenase of *Devosia riboflavina* involved in stereoselective reduction of 3-pyrrolidinone derivatives 73
- Biocatalysis  
Electroenzymatic synthesis 57
- Bioreduction  
Comparative study in the asymmetric bioreduction of ketones by plant organs and undifferentiated cells 49
- Cactus *Opuntia imbricata*  
Stability and activity of bovine prostaglandin H synthase immobilized on *Opuntia imbricata* (coyoonxtle) 1
- Candida antarctica* type B lipase  
Multipoint covalent immobilization of microbial lipase on chitosan and agarose activated by different methods 100
- Cellulase  
Partition of enzymes between the solvent and insoluble substrate during the hydrolysis of lignocellulose by cellulases 42
- Ceramide  
Kinetic study of sphingomyelin hydrolysis for ceramide production 93
- Chiral alcohols  
Characterization of novel alcohol dehydrogenase of *Devosia riboflavina* involved in stereoselective reduction of 3-pyrrolidinone derivatives 73
- Chitosan  
Multipoint covalent immobilization of microbial lipase on chitosan and agarose activated by different methods 100
- Chloroperoxidase  
Enhanced catalytic performance and stability of chloroperoxidase from *Caldariomyces fumago* in surfactant free ternary water–organic solvent systems 24
- Cofactor regeneration  
Electroenzymatic synthesis 57
- Cofactors  
Electroenzymatic synthesis 57
- Covalent and non-covalent immobilization  
Stability and activity of bovine prostaglandin H synthase immobilized on *Opuntia imbricata* (coyoonxtle) 1
- Cyanidioschyzon merolae* NEIS-1332  
Stereoinversion of 1-arylethanols by *Cyanidioschyzon merolae* NEIS-1332 19
- Electrochemistry  
Electroenzymatic synthesis 57
- Enantioselective  
Comparative study in the asymmetric bioreduction of ketones by plant organs and undifferentiated cells 49
- Enzyme immobilization  
A new metal-chelated beads for reversible use in uricase adsorption 36  
Multipoint covalent immobilization of microbial lipase on chitosan and agarose activated by different methods 100
- Enzyme modulation  
Lecitase® ultra as regioselective biocatalyst in the hydrolysis of fully protected carbohydrates. Strong modulation by using different immobilization protocols 110
- Enzyme specificity  
Lecitase® ultra as regioselective biocatalyst in the hydrolysis of fully protected carbohydrates. Strong modulation by using different immobilization protocols 110
- Enzyme stability  
Stability and activity of bovine prostaglandin H synthase immobilized on *Opuntia imbricata* (coyoonxtle) 1
- Enzyme stabilization  
Multipoint covalent immobilization of microbial lipase on chitosan and agarose activated by different methods 100
- Enzymes  
Phenolic compounds as likely natural mediators of laccase: A mechanistic assessment 118
- Exchanging anionic resin  
Optimization of invertase immobilization by adsorption in ionic exchange resin for sucrose hydrolysis 86
- Grapefruit juice  
Kinetic modelling of naringin hydrolysis using a bitter sweet alfa-rhamnopyranosidase immobilized in k-carrageenan 10
- Hydrolysis  
Kinetic modelling of naringin hydrolysis using a bitter sweet alfa-rhamnopyranosidase immobilized in k-carrageenan 10  
Partition of enzymes between the solvent and insoluble substrate during the hydrolysis of lignocellulose by cellulases 42
- IMAC  
A new metal-chelated beads for reversible use in uricase adsorption 36
- Immobilized invertase  
Optimization of invertase immobilization by adsorption in ionic exchange resin for sucrose hydrolysis 86
- Invert sugar  
Optimization of invertase immobilization by adsorption in ionic exchange resin for sucrose hydrolysis 86
- Ionic liquid  
Design of phosphonium ionic liquids for lipase-catalyzed transesterification 81
- k-Carrageenan  
Kinetic modelling of naringin hydrolysis using a bitter sweet alfa-rhamnopyranosidase immobilized in k-carrageenan 10
- Kinetic  
Kinetic study of sphingomyelin hydrolysis for ceramide production 93

- Laccase  
Phenolic compounds as likely natural mediators of laccase: A mechanistic assessment 118
- Lignocellulose  
Partition of enzymes between the solvent and insoluble substrate during the hydrolysis of lignocellulose by cellulases 42
- Lipase  
Design of phosphonium ionic liquids for lipase-catalyzed transesterification 81
- Mediators  
Phenolic compounds as likely natural mediators of laccase: A mechanistic assessment 118
- 2-Methylcyclohexanone  
Stereoinversion of 1-arylethanols by *Cyanidioschyzon merolae* NEIS-1332 19
- NADH  
Characterization of novel alcohol dehydrogenase of *Devosia riboflavina* involved in stereoselective reduction of 3-pyrrolidinone derivatives 73
- Naringin  
Kinetic modelling of naringin hydrolysis using a bitter sweet alfa-rhamnopyranosidase immobilized in k-carrageenan 10
- Naringinase  
Kinetic modelling of naringin hydrolysis using a bitter sweet alfa-rhamnopyranosidase immobilized in k-carrageenan 10
- Oxidation  
Enhanced catalytic performance and stability of chloroperoxidase from *Caldariomyces fumago* in surfactant free ternary water–organic solvent systems 24
- Oxidoreductases  
Electroenzymatic synthesis 57
- Peracetylated carbohydrates  
Lecitase® ultra as regioselective biocatalyst in the hydrolysis of fully protected carbohydrates. Strong modulation by using different immobilization protocols 110
- Phenols  
Phenolic compounds as likely natural mediators of laccase: A mechanistic assessment 118
- Phospholipase  
Lecitase® ultra as regioselective biocatalyst in the hydrolysis of fully protected carbohydrates. Strong modulation by using different immobilization protocols 110
- Phospholipase C  
Kinetic study of sphingomyelin hydrolysis for ceramide production 93
- Phosphonium salt  
Design of phosphonium ionic liquids for lipase-catalyzed transesterification 81
- Plants  
Comparative study in the asymmetric bioreduction of ketones by plant organs and undifferentiated cells 49
- Prochiral ketones  
Comparative study in the asymmetric bioreduction of ketones by plant organs and undifferentiated cells 49
- Prostaglandin H synthase  
Stability and activity of bovine prostaglandin H synthase immobilized on *Opuntia imbricata* (coyonoxtle) 1
- Pyrrolidinol  
Characterization of novel alcohol dehydrogenase of *Devosia riboflavina* involved in stereoselective reduction of 3-pyrrolidinone derivatives 73
- Radicals  
Phenolic compounds as likely natural mediators of laccase: A mechanistic assessment 118
- Rapid reaction  
Design of phosphonium ionic liquids for lipase-catalyzed transesterification 81
- Red algae  
Stereoinversion of 1-arylethanols by *Cyanidioschyzon merolae* NEIS-1332 19
- Reduction  
Characterization of novel alcohol dehydrogenase of *Devosia riboflavina* involved in stereoselective reduction of 3-pyrrolidinone derivatives 73
- Regioselective  
Comparative study in the asymmetric bioreduction of ketones by plant organs and undifferentiated cells 49
- Regioselective reaction  
Lecitase® ultra as regioselective biocatalyst in the hydrolysis of fully protected carbohydrates. Strong modulation by using different immobilization protocols 110
- RSM  
Kinetic modelling of naringin hydrolysis using a bitter sweet alfa-rhamnopyranosidase immobilized in k-carrageenan 10
- Sphingomyelin  
Kinetic study of sphingomyelin hydrolysis for ceramide production 93
- Stability  
Enhanced catalytic performance and stability of chloroperoxidase from *Caldariomyces fumago* in surfactant free ternary water–organic solvent systems 24
- Stereoinversion  
Stereoinversion of 1-arylethanols by *Cyanidioschyzon merolae* NEIS-1332 19
- Surfactant free microemulsions  
Enhanced catalytic performance and stability of chloroperoxidase from *Caldariomyces fumago* in surfactant free ternary water–organic solvent systems 24
- Ternary systems  
Enhanced catalytic performance and stability of chloroperoxidase from *Caldariomyces fumago* in surfactant free ternary water–organic solvent systems 24
- Thermal stability  
Kinetic study of sphingomyelin hydrolysis for ceramide production 93
- Transesterification  
Design of phosphonium ionic liquids for lipase-catalyzed transesterification 81
- Uricase  
A new metal-chelated beads for reversible use in uricase adsorption 36
