

**Correction to General and Selective Synthesis of (Z)-3-Haloacrylates via Palladium-Catalyzed Carbonylation of Terminal Alkynes** [*J. Org. Chem.* **2005**, *70*, 477. DOI: DOI: 10.1021/jo048358r]. Jin-Heng Li,\* Shi Tang, and Ye-Xiang Xie

Page 478, entries 14 and 15 in Table 2. The products **15** and **16** should be *E*-isomers, i.e., (*E*)-methyl 2-bromo-3-(4-nitrophenyl)acrylate (**15**) and (*E*)-isopropyl 2-bromo-3-(4-nitrophenyl)acrylate (**16**), according to 2-D NMR analysis and the chemical shift of the olefinic proton of the corresponding products.

We thank Clarke Taylor (Lycera Corp., Plymouth, MI) for helpful advice.
