# Eastman vs. fouled food.

Rancid vegetable oil really wrecks appetite appeal and shelf life.

The best way to stop that from happening is to block oxidation with Tenox® TBHQ anti-oxidant. It took nine long years to develop this antioxidant that polyunsaturated vegetable oils would get along with better.

But now that it's here you can protect such oils as safflower, cottonseed, corn, soybean and palm. Our studies show an added benefit; TBHQ does not discolor when used in the presence of iron.

And TBHQ can also be combined with other antioxidants such as BHA and BHT to form highly effective formulations.

Tenox TBHQ: A smart way to keep your profits from going bad.

We'd like an opportunity to help you develop better antioxidant systems for your products. Now that TBHQ is available you may want to re-evaluate your antioxidant system.

## ACS Plans August Workshop on New Foods and Ingredients

To help scientists, technologists, and executives keep abreast of new developments in the food industry, the Agricultural and Food Chemistry Division of the American Chemical Society is planning to have a Workshop on New Foods and Ingredients in San Francisco on August 25-27, 1976, preceding the national meeting of the American Chemical Society, which will also be held there.

Dr. George E. Inglett, of the Northern Regional Research Center (ARS, USDA) in Peoria, IL, has arranged a program of lectures and panel discussions by 20 leading experts on important upcoming changes and advances in foods and ingredients from the viewpoints of the consumer, the processor, and regulatory agencies.

For further information, contact Dr. S.J. Kazeniac, American Chemical Society, Agricultural and Food Chemistry Division, Campbell Institute for Food Research, Camden, NJ 08101 (tele: 609-964-4000). ■

## De Laval Acquires Sullivan Corporation

The De Laval Separator Company, Poughkeepsie, NY, has purchased the Sullivan Corporation, Tiburon, CA, designers and engineers of vegetable oil refinery systems, according to John R. Conklin, De Laval president.

Sullivan Corporation and De Laval's vegetable oil division are being merged to form a new corporation. The new organization will operate as a subsidiary of De Laval Separator Co., a member of the worldwide Alfa-Laval Group, and serve both U.S. and world markets.

Officers of the new corporation will be: Conklin, president; Edward G. Bahret, currently vice president of De Laval's Food Division, vice president and general manager; and Frank E. Sullivan, currently president of Sullivan Corporation, vice president and director of engineering. Karl Klein, formerly manager of grain processing sales for De Laval, has been appointed manager of marketing and sales. Bahret, Sullivan, and Klein are AOCS members.

In addition to complete vegetable oil process systems, the corporation will design and sell De Laval and Alfa-Laval rendering and blood dewatering systems for the meat processing industry. Headquarters for this De Laval engineering center will be a Tiburon, CA. ■

## Gardner Named Laboratory Chief at Research Center

Homer K. Gardner, Jr., has been named chief of the Engineering and Development Laboratory at the Agricultural Research Service (ARS) Southern Regional Research Center in New Orleans.

As laboratory chief, Gardner will have responsibility for overall management of engineering research involving new and improved food and industrial products from Southern farm commodities, including cotton, cottonseed, peanuts, rice, and other potential food crops.

During his 30 years at the Center, Gardner, a chemical engineer, has had a major role in the development of an edible high-protein flour from cottonseed. The flour, with about five times the protein of wheat flour, is now nearing initial commercial production.

During the past several years, Gardner has directed pilot plant research aimed at developing processes for the removal or destruction of undesirable by-products caused by molds that may contaminate cottonseed, peanuts, and other farm commodities.

Author or coauthor of 27 technical publications and patents, Gardner has twice received the U.S. Department of Agriculture Superior Service Award: once for his part in research that resulted in development and commercialization of improved low-cost cotton batting products, and once for his part in the development and commercialization of a highly efficient process for removing the oil from cottonseed, soybeans, and other oilseeds.

Educated at Mississippi State College where he was awarded the Bachelor of Science degree in chemical engineering in 1943, Gardner has been an AOCS member since 1964. He served as assistant general chairman of this year's 67th Annual Spring Meeting in New Orleans. ■
