

Northeast Section Schedules Catalyst Talk

Frank Naughton, chairman of the Northeast Section AOCs meeting to be held in New York City on February 15, 1972, announced the topic of the evening to be centered about hydrogenation catalysis.

Chester Pedigo of the Girdler Catalyst Division of Chemetron Corporation, a consultant and specialist in the field of catalysis, is scheduled to present a technical dissertation on hydrogenation catalysts. Mr. Pedigo is knowledgeable in the petrochemical processing field as well as fats and oils. It is expected that surface area phenomena to obtain selectivity in hydrogenation processes will be an integral part of the talk. Since Mr. Pedigo is knowledgeable in a diverse number of catalysts and processes, it is expected that the subject matter will be of great interest to AOCs members.

The catalyst talk will be presented on Tuesday night, February 15, 1972, at the Chemists Club in New York City.

Symposium on Environmental Control Set for April

The Northeast Section's annual, one day symposium will be held at the Robert Treat Hotel, Newark, New Jersey on April 11, 1972.

A tentative program on Environmental Control will be presented covering a variety of subjects. The topics will center about the following subjects: Plant Pollution Control, Odor Control and Measurements, Recovery and Reuse of Liquid Waste Streams, Phosphate Free Detergents, Odor Measurement Techniques, and AOCs Committee on Environmental Control.

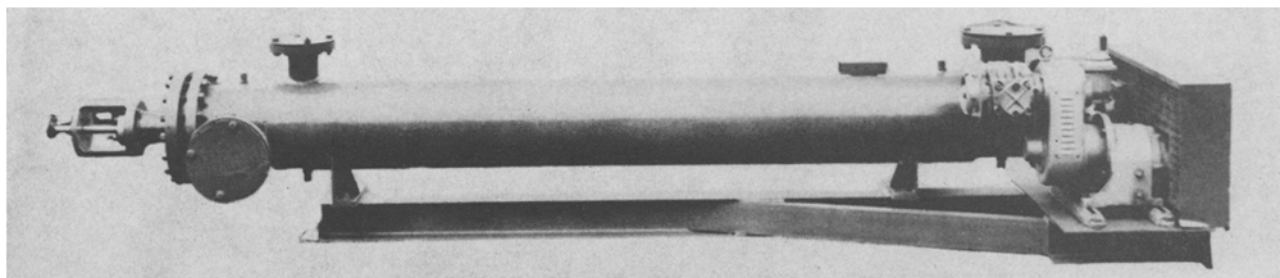

Frank White, Henry Molteni and Joyce Kern have been working to obtain experts in the oil, fats and lipid field to present papers on the above subjects. The program is nearing completion and will be outlined in the next issue of JAOCs.

The officers of the Northeast Section, Manny Eidjadi, President, Stan Dominik, Vice President, Harry Hamilton, Secretary, Robert Casparian, Treasurer, invite all members of the Society and associated people in the Northeast area to set aside April 11, 1972 to attend a meaningful day at the Northeast Symposium.

ARMSTRONG-CHEMTEC HAS PILOT PLANT FATS CRYSTALLIZERS FOR RENT

To allow you to test: Tallow and tall oil fatty acids separations with and without solvents; fractionations of marine oils, vegetable oils, and animal fats; processing viscous fatty materials.

Bring us your fats crystallization problems.
