

Cover: The figure shows the SEM picture of polyurethane particles synthesized using polybutadiene-OH (5 wt%) as a stabilizer (top left), side-chain liquid-crystalline polyacrylates in 4'-pentyl-4-cyanobiphenyl using polarized optical microscopy at 55°C (top right), the SEM image of raspberry-like hybrids based on 500 nm Stöber silica particles (bottom left) as well as the SAXS under shear and the TEM of linear and cyclic PS-PI diblock copolymer micelles (bottom right).
