

**Cover:** The 6<sup>th</sup> international conference on polymer-solvent complexes and intercalates (August 29-September 1, 2006, Manchester, UK) was dedicated to present results in the field of polymer-solvent compounds, i.e., complexes, intercalates or crystallosolvates. These compounds originate from the intimate organization of solvent molecules together with polymer chains. Since starting this conference series 10 years ago, a continuously increasing number of contributions presented by researchers in the field of biomaterials demonstrates how relevant the topic has become also to biopolymers. The picture on the cover shows the con-
