

Cover: The 5th International Workshop on Heterogeneous Ziegler-Natta Catalysts was held at Japan Advanced Institute of Science and Technology, Ishikawa, in March 2007 in order to promote more profound understanding on many long standing basic problems as well as further developments in this important field.

The cover shows the basic concept for synthesis of catalyst particles via agglomeration of surface functionalized nanostyrene particles from the contribution by Markus Klapper et. al. p. 92.
