J. F. Harrod and L. R. Wallace: Kinetics of π -Crotyl-nickel Iodide Catalyzed Butadiene Polymerization.

Page 452, column 2, second paragraph. "According to eq 6. . . ." is incorrect and should read: According to eq 6, a plot of $1/\overline{D.P.}$ vs. $1/\text{conversion}$ at constant catalyst concentration should yield a straight line with an intercept of k_{tr}/k_3 (since $[C_4H_6]t \propto \text{conversion}$). Such a plot is shown in Figure 3. The intercept value corresponds to $k_3/k_{tr} \approx 150$, or a limiting $M_n \approx 8000$.

Page 451. Figure 3 should be replaced by the following figure.

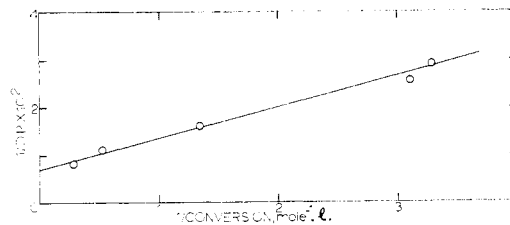

Figure 3. Reciprocal degree of polymerization vs. reciprocal conversion.
