C. Plessis, G. Arzamendi, J. R. Leiza, H. Schoonbrood D. Charmot, and J. M. Asua*: A Decrease in Effective Acrylate Propagation Rate Constants Caused by Intramolecular Chain Transfer. Volume 33, Number 1, 2000, pp 4–7.

The values of the parameters k_{fp} and k_{t0} quoted in Table 1 of this paper were given in $\text{cm}^3/\text{mol}\cdot\text{s}$. In $\text{L}/\text{mol}\cdot\text{s}$ these values should be

$$k_{fp} = 0.133 \text{ L}/\text{mol}\cdot\text{s} \text{ and } k_{t0} = 6.55 \times 10^6 \text{ L}/\text{mol}\cdot\text{s}$$

The simulations results and the conclusions of the paper are in no way affected, though. We apologize for the error and the inconvenience this might have caused to the readers.
