

## Addendum

It has been pointed out to us that the analysis of the  $^1\text{H}$  and  $^{13}\text{C}$  NMR spectra of flavone, published recently in this Journal [D. W. Aksnes, A. Standnes and O. M. Andersen, *Magn. Reson. Chem.* **34**, 820–823 (1996)], was already reported by P. Joseph-Nathan, J. Mares, Ma. C. Hernández and J. N. Shoolery, *J. Magn. Reson.* **16**, 447–

453 (1974). We apologise for having overlooked and not cited this earlier reference.
