## ERRATUM

In the article “The Effects of Physical Exercise on Plasma Prebeta-1 High-Density Lipoprotein” (Jafari et al, 52:437-442, 2003), the units for prebeta-1 HDL and Apo A-I are wrong by reason of misplacement of the decimal point.

The pre-exercise level of absolute prebeta-1 HDL was  $100 \pm 60 \mu\text{g/mL}$ ; the post-exercise level was  $130 \pm 70 \mu\text{g/mL}$ . The pre-exercise level of Apo A-1 was  $1.36 \pm 0.19 \text{ mg/mL}$ ; the post-exercise level was  $1.31 \pm 0.19 \text{ mg/mL}$ . This does not change the statistical analysis.
