Ferroelectrics publishes experimental, theoretical and applied papers dealing with ferroelectric and related materials. The experimental and theoretical papers are concerned with the understanding of ferroelectrics and associated phenomena in simple and complex materials; the applied papers deal with the utilization of these materials in devices and system. Original research papers on such subjects as theories of ferroelectricity, crystal growth, ceramic fabrication, and the structural, electrical, optical and mechanical properties of these materials and combinations thereof are included.

Four issues per volume.
