A Recommended Journal from Gordon and Breach

FERROELECTRICS

Editors: I. LEFKOWITZ, *Pitman-Dunn Research Laboratories* and G. W. TAYLOR, *Princeton Materials Science*

Editorial Advisory Board: R. Abe, S. C. Abrahams, K. S. Aleksandrov, A. S. Barker, E. F. Bertaut, R. Blinc, J. C. Burfoot, J. Chapelle, L. E. Cross, S. E. Cummins, G. Dolling, V. Dvorak, J. Fousek, G. H. Haertling, H. Heywang, S. Hoshino, H. Jaffe, V. Janovec, S. K. Kurtz, C. E. Land, R. Landauer, A. Linz, H. D. Megaw, W. J. Merz, R. C. Miller, T. Mitsui, H. E. Müser, T. Nakamura, R. E. Nettleton, S. Nomura, L. Onsager, G. S. Pawley, I. Pehah, G. A. Samara, S. Sawada, G. Shirane, L. A. Shuvalov, B. D. Silverman, G. A. Smolensky, H. L. Stadler, E. C. Subbarao, H. Toyoda, K. Toyoda, Yu. N. Venevtsev, G. S. Zhdanov, I. S. Zheludev.

Ferroelectrics publishes experimental, theoretical and applied papers dealing with ferroelectric and related materials. The experimental and theoretical papers are concerned with the understanding of ferroelectrics and associated phenomena in simple and complex materials; the applied papers deal with the utilization of these materials in devices and system. Original research papers on such subjects as theories of ferroelectricity, crystal growth, ceramic fabrication, and the structural, electrical, optical and mechanical properties of these materials and combinations thereof are included.

Four issues per volume.

STRUCTURES, MECHANISMS AND SPECTROSCOPY

120 Problems, 60 Solutions for the organic chemist

By J. C. MAIRE and B. WAEGELL, *Faculté des Sciences de Marseille*

A collection of problems and solutions in spectroscopy intended for students taking specialized courses, and also for research workers. The problems are based on recently published work, and are conceived in such a way that they represent the type of problem the research worker or student comes across every day. The solutions outlined are not mere replies, but detailed discussions.

CRISTALLOCHIMIE DES STRUCTURES TÉTRAÉDRIQUES

Edited by E. PARTHE, *University of Pennsylvania*

Le présent livre est écrit à l'intention des chimistes minéralistes, des radio-cristallographes et des physiciens de l'état solide et il pourrait être particulièrement intéressant pour les spécialistes des semi-conducteurs. Mais l'auteur n'a aucun contrôle sur l'usage fait de son oeuvre. Il y aura certainement des lecteurs qui l'apprécieront seulement pour les tableaux très complets de structures cristallines, alors que le but principal de l'auteur est de montrer qu'il existe des règles électroniques qui permettent non seulement de faire des corrélations entre des composés à structure tétraédrique, mais aussi de prédire l'existence de tels composés.

Table des matières: Caractères Généraux, Règle des Electrons de Valence pour les Structures Tétraédriques Normales. Règle des Electrons de Valence dans les Cas des Structures Tétraédriques Déficitaires. Le Concept de Composé de Valence et son Application aux Structures Tétraédriques. Application des Règles Electroniques, Conjointement aux Structures Tétraédriques et aux Composés de Valence. Règles Supplémentaires Relatives aux Structures Tétraédriques. Considérations Géométriques sur les Structures Tétraédriques. Composés à Structures Tétraédriques Déficitaires. Problèmes Posés par le Concept de Structure Tétraédrique Remplie. Revue Générale des Règles et des Composés à Structures Tétraédriques Connues. Structures Tétraédriques et Application des Hautes Pressions. Données Cristallographiques sur les Structures Tétraédriques Normales. Données Cristallographiques sur les Structures Tétraédriques Déficitaires.

366 pp. \$35.50
