Space Charge Controlled Currents in Insulators— Detection of Virtual Anode

MARTIN POPE^{†‡} and YEDIDIAH SOLOWIEJCZYK[‡]

New York University, Chemistry Department[†] and Radiation and Solid State Laboratory[‡]

Due to an error in assigning absorption coefficient values in the long wavelength region of tetracene, the conclusions drawn in this paper[§] concerning the detection of a potential maximum are at least premature, and may even be in error. Further measurements are being made, and they will be reported in due time.
