## PREFACE

The Los Alamos Neutron Scattering Center (LANSCE) co-hosted a *Workshop on the Neutron Scattering Studies of Polymers* with the Center for Materials Science at Los Alamos, New Mexico, November 3–4, 1987. It was decided *after* the meeting to publish the proceedings in a national journal. The Journal of Molecular Crystals and Liquid Crystals agreed to the task. However, many of the papers presented at the meeting were not yet written in publishable form. Upon their receipt they were reviewed by at least two referees each. This lengthy process, coupled with the implementation of numerous other projects, has caused these proceedings to be published at this time. The meeting was extremely successful, but not all presenters elected to be represented in this document. Even though the publication is appearing at this late date, the material included is quite relevant and important to the field. We have been asked by a number of people several times over for the references to particular papers they knew would appear in these proceedings—a certain indication that the material is sought after. We do believe that you will find this document a valuable asset in the scattering studies of polymers.
