

Letter From the Guest Editors

On March 25, 2004, which would have been Leon Wolfe's 78th birthday, the Montreal Neurological Institute held a day of tribute to him in recognition of his many outstanding contributions to the Institute, McGill University, and the global neuroscience community.

At the Leon Wolfe Symposium, honoring the memory of this very special individual who touched all our lives—whether as a teacher, mentor, or friend—Dr. Mathew Spence, one of his first graduate students, presented an overview of Wolfe's scientific

achievements, and other of his former students and collaborators discussed their current work and interests. Dr. Nicolas Bazan closed the scientific sessions by giving the First Leon Wolfe Killam Lecture.

This issue is a collection of the papers presented on that occasion.

We wish to thank the Killam Foundation for financial support.
