

Molecular Nutrition & Food Research

Instructions to authors

(revised December 2005)

Authors are requested to follow these instructions carefully. Manuscripts not prepared accordingly will not be accepted.

- 1 Aims and scope
- 2 General terms of publication
- 3 Online submission of manuscripts
- 4 Types of contributions
- 5 Organization of manuscripts
- 6 Proofs and reprints
- 7 NIH Authors
- 8 Reporting specific data
- 9 Standard abbreviations

1 Aims and scope

Molecular Nutrition & Food Research (MNF) publishes papers focusing on a broad area of food research dealing with bioactivity/safety, chemistry, immunology, microbiology, nutrition, and technology. Emphasis is given to bioactivity/safety and nutrition.

MNF is published in 12 issues *per* year, including regular issues as well as topical issues. Three categories of scientific contributions are accepted for publication:

- (i) research papers,
- (ii) reviews, and
- (iii) educational papers.

Our **Early View** online publication is updated weekly and enables papers to be available online and citable before going into print.

2 General terms of publication

The author vouches that the work has not been published elsewhere, either completely, in part, or in any other form and that the manuscript has not been submitted to another journal. The submitting author (listed under “Correspondence”) accepts the responsibility of having included as coauthors all appropriate persons. The submitting author certifies that all coauthors have seen a draft copy of the manuscript and agree with its publication.

Upon acceptance of the manuscript the author is required to fill in the “Copyright Transfer Agreement”, sign it and submit it along with hardcopies of the illustrations of the paper to:

Molecular Nutrition & Food Research

Editorial Office

Wiley-VCH Verlag

Boschstrasse 12

D-69469 Weinheim

Germany

E-mail: mnf@wiley-vch.de

Fax: +49-6201-606-172

This mandatory copyright form can be found on the homepage of the journal at <http://www.mnf-journal.de> under the link “For Authors”. If the contribution contains one or more color figures the author is also required to submit the “Color Figures Order Form” to the above address. This form can be found at the same site as the “Copyright Transfer Agreement”. Please note that if you are submitting material which has already been published elsewhere, you must also send to the Editorial Office permission in writing that this material may be reprinted in **MNF**.

All scientific contributions will be peer-reviewed on the criteria of originality and quality. Authors may suggest up to five potential referees, including their e-mail addresses, as well as individuals whom they wish to be excluded from the review process. On acceptance, papers may be subjected to editorial changes. A revised paper will retain its original date of receipt only if it is resubmitted to the Editors within two months after revision was requested. Responsibility for the factual accuracy of a paper rests entirely with the author.

MNF publishes articles in English. Manuscripts must be grammatically and linguistically correct, and authors less familiar with English usage are advised to seek the help of English-speaking colleagues. American spelling is preferred.

Please note that the Ethical Guidelines for Publication of Chemical Research issued by the American Chemical Society are followed and applied by the Editors of **MNF**.

3 Online submission of manuscripts

MNF offers a web-based manuscript submission and peer review system. This service guarantees fast and safe submission of manuscripts and rapid assessment. Using this system is obligatory, conventional submission of manuscripts is not accepted.

3.1 General remarks

To submit your manuscript online, please proceed along the following steps:

- Prepare your manuscript and illustrations in the appropriate format, according to the instructions given below (see Sections 4 to 9). Please also make sure that your paper conforms to the scientific and style instructions of **MNF** as given herein. You can also find a link to these instructions at the submission site at <http://mc.manuscriptcentral.com/mnf/> or on the homepage of the journal at <http://www.mnf-journal.de> under the link “For Authors”.
- If you have not already done so, create an account for yourself in the system at the submission site, <http://mc.manuscriptcentral.com/mnf/> by clicking on the “Create Account” button. To monitor the progress of your manuscript throughout the review process, just login periodically and check your Author Center.
- Please be sure to study the “Instructions and Forms” given on the **MNF** homepage carefully, and then let the system guide you through the submission process. Online help is available to you at all times during the process. You are also able to exit/re-enter at any stage before finally “submitting” your work. All submissions are kept strictly confidential.

If you have any questions concerning the online submission program, do not hesitate to contact Editorial Support at mnf@wiley-vch.de.

3.2 Electronic manuscripts

Please follow the instructions in Section 5 “Organization of manuscripts” when preparing the electronic version of the manuscript and ensure that data are given in the order and the correct style for the journal.

- Data should be typed unjustified, without hyphenation except for compound words. Use carriage returns only to end headings and paragraphs; spacing will be introduced by the typesetter.
- Do not use the space bar to make indents; where these are required (*e.g.* tables) use the TAB key.
- If working in Word for Windows, please create special characters through **Insert/Symbol**.

All submissions will be converted to PDF format during the upload process. The system automatically generates one PDF file which contains all parts of the manuscript.

Please note that **after acceptance** the file management for production purposes requires the following:

- Main text (incl. front material) as well as figure legends and tables (in this order) should be given in one file, preferably saved in DOC or RTF format.
- Figures should preferably be in TIFF, EPS, PPT or the original format. Each figure should be given in a separate file and should have the following resolution:

Type	Resolution
Graphs	800 – 1200 DPI
Photos	400 – 800 DPI
Color (only CMYK)	300 – 400 DPI

3.3 Revised manuscripts

In revised manuscripts the areas containing the major required changes should be marked and the script color changed. The file(s) with the changes visible on screen should be submitted to the online procedure.

Upon acceptance of the manuscript the final uploaded version will be taken as the basis for copy editing and the subsequent production process.

4 Types of contributions

Three types of scientific contributions are considered for publication:

(i) **Research papers** describing complete investigations. Manuscripts may not have been published previously, except in the form of a preliminary communication.

(ii) **Review articles** provide an overview on the current research in a specific field.

(iii) **Educational papers** will describe and/or explain a method or technique used in food and nutrition research. They should be written in continuous style with headings (not numbered). An educational paper may be supplemented by multimedia material (*e.g.* animations or video sequences) which will be only available online.

Research papers should not exceed 6500 words in total; this includes references, figure legends, and tables.

Review articles and educational papers will normally be invited by the Editors. In both cases there is no length restriction and, thus, there are no page charges. However, space should be used economically. Authors wishing to submit a review article or an educational paper should send a brief outline of its contents to the Editor-in-Chief (schreier@pzc.uni-wuerzburg.de) before the manuscript is drafted.

Further, should an author wish to submit a short communication, he/she should contact the Editor-in-Chief.

5 Organization of manuscripts

Manuscripts must be typewritten with double spacing (including references, tables, legends, *etc.*).

5.1 Contents of first page of manuscript

The first page of the manuscript should contain only the following:

- 1) Title of the paper containing only the keywords pertaining to the subject matter. Standard abbreviations may be used in the title.
- 2) Full names (including first name) of the authors and the name of the institute. If the publication originates from several institutes the affiliations of all authors should be clearly stated by using superscript numbers after the name and before the institute.
- 3) A shortened version of the title not exceeding 70 letters (running title).
- 4) Name (and title) and full postal address of the author to whom all correspondence (including galley proofs) is to be sent. E-mail and fax number must be included to speed up communication.
- 5) A list of abbreviations used in the paper excluding standard abbreviations (see list of “Standard Abbreviations”, Section 9).
- 6) Keywords (max. 5, in alphabetical order) which will be used for compiling the subject index.

5.2 Abstract

The second and (if necessary) third page of the manuscript should contain the abstract only. This must be self-explanatory and intelligible without reference to the text. It should not exceed 200 words. Abbreviations, but not standard abbreviations, must be written in full when first used.

5.3 Division into sections

Manuscripts should be divided into the following sections:

“1 Introduction”: containing a description of the problem under investigation and a brief survey of the existing literature on the subject.

“2 Materials and methods”: for special materials and equipment, the manufacturer’s name and location should be provided.

“3 Results”

“4 Discussion”

“5 References”

Sections 3 and 4 may be combined and should then be followed by a short section entitled “Concluding remarks”.

Subdivisions of sections should be indicated by subheadings.

5.4 References

References should be numbered sequentially in the order in which they are cited in the text. The numbers should be set in brackets, thus [2, 18]. References are to be collected in numerical order at the end of the manuscript under the heading “References”; they should also be typed with double spacing throughout. Papers with multiple authors should be limited to listing five authors. Where there are more than five authors, the first four should be listed, followed by *et al.* Titles of journals should be abbreviated according to the practice of *Chemical Abstracts*. The abbreviated title and the volume number should be in italics. Please give the DOI (Digital Object Identifier) only if the paper is not yet in print. Please note the following examples.

Journals:

- [1] Humpf, H.-U., Voss, K. A., *Mol. Nutr. Food Res.* 2004, 48, 255–269.

Other serial publications such as “*Advances in Food and Nutrition Research*” should be cited in the same manner as journals.

Books:

- [2] Eisenbrand, G., Dayan, A. D., Elias, P. S., Grunow, W., Schlatter, J. (Eds.), *Carcinogenic and Anticarcinogenic Factors in Food*, Wiley-VCH Verlag, Weinheim 2003.

Chapter in a book:

- [3] Geis, A., Perspectives of genetic engineering of bacteria used in food fermentations, in: Heller, K. J. (Ed.), *Genetically Engineered Food – Methods and Detection*, Wiley-VCH Verlag, Weinheim 2003, pp. 100–118.

Allusions to “unpublished observations”, papers “to be published” or “submitted for publication” and the like should be a part of the text, in parentheses. Material “in press” should be entered under references along with the DOI, if available. Posters and abstracts in meetings books must not be cited unless they are generally accessible. Responsibility for the accuracy of bibliographic references rests entirely with the author.

5.5 Acknowledgements

Acknowledgements as well as information regarding funding sources should be provided on a separate page and will appear at the end of the text (before “5 References”).

5.6 Tables

Tables with suitable captions at the top and numbered with Arabic numerals should be collected at the end of the text on separate sheets (one page *per* table). Column headings

should be kept as brief as possible and indicate units. Footnotes to tables should be indicated with a), b), c) *etc.* and typed on the same page as the table.

5.7 Supplementary material

Extensive tables (more than 5 typewritten pages) should be published online as supplementary material (in PDF file format). This material will not be typeset so authors should prepare this in the final form (preferably already in PDF file format). Also for this reason there will be no galley proofs of this material. Supplementary material will be made freely available on the web (similar to the table of contents and the article abstracts). Authors are permitted to place this material on their homepages when they are setting up a link to the full-text version of the article in Wiley InterScience.

Further, other files may be submitted as supplementary material (*e.g.*, animations, video sequences). Please contact the Editorial Office for suitable file formats. All supplementary material will also undergo the peer-review process. Thus, this material has to be submitted electronically along with the main body of the article. It is in the hands of the Editor-in-Chief to decide which part of the manuscript will be published as supplementary material.

5.8 Figures and legends

Diagrams and photographs should be submitted as separate files. Upon acceptance of the paper hardcopies of fine quality suitable for reproduction should be sent to the Editorial Office (address see Section 2). Figures should be numbered consecutively with Arabic numerals in the order of their appearance. Figures should not be larger than the manuscript paper. Numbers and symbols inscribed must be large enough to be legible after reduction in size. In electropherograms presented horizontally, the anode should be at the left while in vertical presentations the anode should be at the bottom. Two-dimensional presentations, *e.g.* with isoelectric focusing and sodium dodecyl sulfate-electrophoresis in the two dimensions, are thus presented consistent with the standard coordinate system. Each figure is to be accompanied by a legend, which should be self-explanatory. The legends should not appear under the figures but be collected and typewritten with double spacing following the references.

- Please make sure that lettering is sufficiently large since it must remain legible after the required reduction of the figure from its original size to 8 cm in width (letter size after reproduction about 2 mm).
- Color figures can be reproduced, however, authors will be charged for additional costs incurred for the reproduction of color (€ 495 *per* figure). Should your contribution contain one or more color figures it is mandatory

that you submit the “Color Figures Order Form” (for further details please see Section 2).

5.9 Biographic material

Corresponding authors of review articles are invited to submit a portrait photograph of themselves and a short biographical text (no more than 80 words) which will appear at the very end of the article.

5.10 Structural formulae

Structural formulae should be drawn in the manuscript in the position where they belong. They must be numbered in consecutive order with the other figures.

5.11 Equations

Mathematical and chemical equations are to be written in the manuscript at the place in which they belong and should be marked by Arabic numerals in parentheses in the right margin in the order of their appearance.

5.12 Abbreviations

Abbreviations are hindrances to a reader working in a field other than that of the author, and to abstractors. Therefore, their use should be restricted to a minimum. Abbreviations should be introduced only when repeatedly used. Abbreviations used only in a table or a figure may be defined in the legend. Standard abbreviations may be used in the title and keywords. If nonstandard abbreviations are used in the Abstract they should be defined in the Abstract, in the list of abbreviations of the manuscript, as well as when first used in the body of the paper.

Section 9 at the end of these instructions contains the list of standard abbreviations which may be used without definition in the articles published in **MNF**.

5.13 Ethics

If the manuscript describes experiments using animals, the permission of the national or local authorities (giving the permission or the accreditation number of the laboratory and of the investigator) should be stated. If no such rules or permission are stipulated in the particular country, this must also be mentioned in the paper. In the case of human studies, it should be stated that local ethical committee approval has been received and that the informed consent of all participating subjects was obtained.

6 Proofs and reprints

Before publication authors will receive page proofs *via* E-mail in PDF low resolution file format, together with a

sheet including instructions and a reprint order form, also as PDF files. The page proofs and the reprint order form should be printed out. The proofs should be carefully corrected following the instructions. In particular, authors should answer any editing queries. The reprint order form should be filled out (even if reprints are not required), and both should be returned, preferably by fax, to the **MNF** Editor-in-Chief at the following address:

Molecular Nutrition & Food Research
Prof. Peter Schreier
University of Würzburg
Food Chemistry
Am Hubland
D-97074 Würzburg
Germany
E-mail: schreier@pzl.uni-wuerzburg.de
Fax: +49-931-8885 484

Authors will be charged for extensive alterations of their article. Reprints can be ordered at prices shown on the reprint order form. Upon publication the submitting author (listed under “Correspondence”) will receive a complimentary copy of the issue containing the article.

7 NIH Authors

On behalf of our authors who are also NIH grantees, Wiley will deposit in PMC and make public after 12 months the peer-reviewed version of the author's manuscript. By assuming this responsibility, we will ensure our authors are in compliance with the NIH request, as well as make certain the appropriate version of the manuscript is deposited. We await the release by PMC of the protocols regarding manuscript submission. We reserve the right to change or rescind this policy.

8 Reporting specific data

8.1 Bioactivity of extracts and other mixtures

Manuscripts in which the individual components responsible for any biological activity have not been chemically characterized will be returned, unreviewed, to the author. Exceptions will only be made by the Editor-in-Chief in special cases.

8.2 Chemical structures

Structures should be produced with the use of a drawing program such as ChemDraw.

Structure drawing preferences are as follows:

As drawing settings select:

chain angle 120°
bond spacing 18% of width
fixed length 14.4 points (0.508 cm, 0.2 in.)
bold width 2.0 points (0.071 cm, 0.0278 in.)
line width 0.6 point (0.021 cm, 0.0084 in.)
margin width 1.6 points (0.056 cm, 0.0222 in.)
hash spacing 2.5 points (0.088 cm, 0.0347 in.)
As text setting select: font, Arial or Helvetica; size, 10 pt.
Under the preferences choose: units, points; tolerances, 3 pixels.
Under page setup choose: paper, US Letter; scale, 100%.

Using the ChemDraw ruler or appropriate margin settings, create structure blocks, schemes, and equations having maximum widths of 11.3 cm (one-column format) or 23.6 cm (two-column format). Note: if the foregoing preferences are selected as cm values, the ChemDraw ruler is calibrated in cm. Also note that a standard sheet of paper is only 21.6 cm wide, so all graphics submitted in two-column format must be prepared and printed in landscape mode.

Use boldface type for compound numbers but not for atom labels or captions.

Authors using other drawing packages should, as far as possible, modify their program's parameters to reflect the above guidelines.

8.3 Physical and other data

It is important that novel compounds, either synthetic or isolated/produced from natural sources, be characterized completely and unambiguously. Supporting data normally include physical form, melting point (if solid), UV/IR spectra, if appropriate, ¹H and ¹³C NMR, mass spectral data, and optical rotations or CD information (when compounds have chiral centers).

Reports on flavor constituents should conform to the recommendations made by the International Organization of the Flavor Industry (IOFI). Thus, substances must be identified using the latest analytical techniques. In general, any particular substance must have its identity confirmed by at least two methods; that means, in practice, comparison of chromatographic and spectroscopic data (which may include GC, MS, IR, and NMR) with those of an authentic sample. If only one method has been applied, the identification has to be labeled as “tentative”. This is also valid in case of identification performed only by comparison of literature data.

Equations should be numbered consecutively and referred to the text; e.g. defined as in Eq. (1).

Physical data should be quoted with decimal points (*e.g.* 25.8 Jk⁻¹ mol⁻¹), and arranged as follows where possible – but in any event in the same order within the manuscript (when measurement conditions remain unchanged they need only be mentioned once, for instance in the column headings): m.p./b.p. 20°C; [α]_D²⁰ = -13.5 (*c* = 0.2 in acetone) ¹H NMR (200 MHz, [D₈]THF, 25°C, TMS): δ = 1.3 (q, ³*J* (H, H) = 8 Hz, 2 H; CH₂), 0.9 ppm (t, ³*J* (H, H) = 8 Hz, 3 H; CH₃); IR(Nujol): $\tilde{\nu}$ = 1790 cm⁻¹ (C=O); UV/Vis (*n*-hexane): λ_{\max} (ϵ) = 320 (5000), 270 nm (12 000); MS (70 eV): *m/z* (%): 108 (20) [M⁺], 107 (60) [M⁺ - H], 91 (100) [C₇H₇⁺]. Plane angles in products of units can have either ° or deg as the unit.

Nomenclature, symbols, and units: The rules and recommendations of the International Union of Pure and Applied Chemistry (IUPAC), the International Union of Biochemistry (IUB), and the International Union of Pure and Applied Physics (IUPAP) should be adhered to.

8.4 Nucleotide and protein sequences

Nucleotides

New nucleotide data must be submitted and deposited in the DDBJ/EMBL/GenBank databases and an accession number obtained before the paper can be accepted for publication. Submission to any one of the three collaborating databanks is sufficient to ensure data entry in all. The accession number should be included in the manuscript, *e.g.* as a footnote on the title page: ‘Note: Nucleotide sequence data reported are available in the DDBJ/EMBL/GenBank databases under the accession number(s) –’. If requested the database will withhold release of data until publication. The most convenient method for submitting sequence data is by the World Wide Web:

EMBL *via* Webin:

<http://www.ebi.ac.uk/embl/Submission/webin.html>

GenBank *via* BankIt:

<http://www.ncbi.nlm.nih.gov/BankIt/>

DDBJ *via* Sakura:

<http://sakura.ddbj.nig.ac.jp/>

Alternatively, the stand-alone submission tool ‘Sequin’ is available from the EBI at <http://www3.ebi.ac.uk/Services/Sequin> and from NCBI at <http://www.ncbi.nlm.nih.gov/Sequin/>

For special types of submissions (*e.g.* genomes, bulk submissions *etc.*) additional submission systems are available from the above sites.

Proteins

Protein sequences which have been determined by direct sequencing of the protein must be submitted to Swiss-Prot at the EMBL Outstation – The European Bioinformatics Institute. Please note that we do not provide accession numbers, **in advance**, for protein sequences that are the result of translation of nucleic acid sequences. These translations will automatically be forwarded to us from the EMBL nucleotide database and are assigned Swiss-Prot accession numbers on incorporation into TrEMBL.

Results from characterization experiments should also be submitted to Swiss-Prot at the EBI. This can include such information as function, subcellular location, subunit *etc.*

9 Standard abbreviations

The abbreviations as listed below may be used without definition in the articles published in **MNF**. Please refer to Section 5.12 for the correct usage of abbreviations in **MNF**.

A	absorbance	GC	gas chromatography	PAGE	polyacrylamide gel electro-
ACN	acetonitrile	GMO	genetically modified organism		phoresis
A/D	analog to digital converter	HDL	high density lipoprotein	PBS	phosphate-buffered saline
amu	atomic mass unit	HEPES	<i>N</i> -(2-hydroxyethyl)piperazine-2'-(2-ethane-sulfonic acid)	PC	personal computer
API	atmospheric pressure ionization	HPCE	high-performance capillary electrophoresis	PCR	polymerase chain reaction
BMI	body mass index	HPLC	high-performance liquid chromatography	PEG	polyethylene glycol
bp	base pairs	HSA	human serum albumin	pI	isoelectric point
BSA	bovine serum albumin	HTML	hypertext mark-up language	PMSF	phenylmethylsulfonyl fluoride
CBB	Coomassie Brilliant Blue	id	inside diameter	PMT	photomultiplier tube
CE	capillary electrophoresis	IEF	isoelectric focusing	ppm	parts <i>per</i> million
CEC	capillary electrochromatography	Ig	immunoglobulin	PTFE	polytetrafluoroethylene
CFE	continuous flow electrophoresis	IL	interleukin	PUFA	polyunsaturated fatty acid
CID	collision-induced dissociation	INF	interferon	PVP	polyvinylpyrrolidone
cpm	counts per minute	IT	ion trap	RIA	radioimmunoassay
CV	coefficient of variation	IT	ion trap	RNA	ribonucleic acid
CZE	capillary zone electrophoresis	kbp	kilobase pairs	RP	reversed phase
1-D	one-dimensional	kDa	kilodalton (molecular mass)	rpm	rotations <i>per</i> minute
2-D	two-dimensional	LC	liquid chromatography	RSD	relative standard deviation
Da	dalton (molecular mass)	LDL	low density lipoprotein	RT-PCR	reverse transcriptase-PCR
DAD	diode-array detection (or diode-array detector)	LOD	limit of detection	SCFA	short chain fatty acid
2-DE	two-dimensional gel electrophoresis	LOQ	limit of quantitation	SD	standard deviation
DMEM	Dulbecco's modified Eagle medium	LPS	lipopolysaccharide	SDS	sodium dodecyl sulfate
DMF	<i>N,N</i> -dimethylformamide	mAb	monoclonal antibody	SEM	standard error of the mean
DMSO	dimethyl sulfoxide	MALDI	matrix-assisted laser desorption/ionization mass spectrometry	SIM	selected ion monitoring
dsDNA	double-stranded DNA	MS	mass spectrometry	S/N	signal-to-noise ratio
DTT	dithiothreitol	Mbp	megabase pairs	SPE	solid-phase extraction
EDTA	ethylenediaminetetraacetic acid	MHC	major histocompatibility complex	ssDNA	single-stranded DNA
EGTA	ethylene glycol-bis (β -amino-ethylether)- <i>N,N,N',N'</i> -tetraacetic acid	MOPS	3-(<i>N</i> -morpholino)propanesulfonic acid	TFA	trifluoroacetic acid
ELISA	enzyme-linked immunosorbent assay	M_r	relative molecular mass (dimensionless)	THF	tetrahydrofuran
EOF	electroosmotic flow	MS	mass spectrometry	TIC	total ion current
ER	endoplasmic reticulum	MS/MS	tandem mass spectrometry	TLC	thin-layer chromatography
ESI	electrospray ionization	MUFA	monounsaturated fatty acid	TOF	time of flight
FAB	fast atomic bombardment	<i>m/z</i>	mass-to-charge ratio	Tris	tris(hydroxymethyl)amino-methane
FAME	fatty acid methyl esters	NMR	nuclear magnetic resonance	U	unit
FITC	fluorescein isothiocyanate	od	outside diameter	URL	uniform resource locator
		OD	optical density	UV	ultraviolet
		ORF	open reading frame	Vh	volt \times hours
				VLDL	very low density lipoprotein
				WWW	World Wide Web
