ISSN 0026-895X

## EDITOR'S NOTE

Molecular Pharmacology in the Postgenomic Era

1

## ACCELERATED COMMUNICATION

Carbohydrate-Binding Agents Efficiently Prevent Dendritic Cell-Specific Intercellular Adhesion  
Molecule-3–Grabbing Nonintegrin (DC-SIGN)-Directed HIV-1 Transmission to T Lymphocytes  
*Jan Balzarini, Yven Van Herrewege, Kurt Vermeire, Guido Vanham, and Dominique Schols*

3

## ARTICLES

$\mu$ -Opioid Receptor Activation Modulates Transient Receptor Potential Vanilloid 1 (TRPV1) Currents in  
Sensory Neurons in A Model of Inflammatory Pain  
*Jeannette Endres-Becker, Paul A. Heppenstall, Shaaban A. Mousa, Dominika Labuz,  
Alexander Oksche, Michael Schäfer, Christoph Stein, and Christian Zöllner*

12

□ In Vivo Responsiveness to Ezetimibe Correlates with Niemann-Pick C1 Like-1 (NPC1L1) Binding  
Affinity: Comparison of Multiple Species NPC1L1 Orthologs  
*Brian E. Hawes, Kim A. O'Neill, Xiaorui Yao, James H. Crona, Harry R. Davis Jr.,  
Michael P. Graziano, and Scott W. Altmann*

19

Pyrrolidine Dithiocarbamate Inhibits Induction of Immunoproteasome and Decreases Survival in a  
Rat Model of Amyotrophic Lateral Sclerosis  
*Toni Ahtoniemi, Gundars Goldsteins, Velta Keksa-Goldsteine, Tarja Malm, Katja Kanninen,  
Antero Salminen, and Jari Koistinaho*

30

Structural Determinants for High-Affinity Zolpidem Binding to GABA-A Receptors  
*Feyza Sancar, Spencer S. Ericksen, Amy M. Kucken, Jeremy A. Teissère, and Cynthia Czajkowski*

38

Characterization of  $\beta_2$ -Adrenergic Receptor Dephosphorylation: Comparison with the Rate of  
Resensitization  
*Tuan M. Tran, Jacqueline Friedman, Faiza Baameur, Brian J. Knoll, Robert H. Moore, and  
Richard B. Clark*

47

*Molecular Pharmacology* (ISSN 0026-895X) is published monthly (two volumes per year beginning in January and July) by the American Society for Pharmacology and Experimental Therapeutics, 9650 Rockville Pike, Bethesda, MD 20814-3995; e-mail: [info@aspet.org](mailto:info@aspet.org); Web site: <http://www.aspet.org>. Periodicals postage paid at Bethesda, MD and at additional mailing offices. POSTMASTER: Send address changes to *Molecular Pharmacology*, 9650 Rockville Pike, Bethesda, MD 20814-3995. Subscription Rates: U.S.: \$616.00 for institutions and \$251.00 for non-ASPET members. Outside the U.S.: \$699.00 for institutions and \$334.00 for non-ASPET members. Single copy:

\$62.00. GST Tax Number for Canadian subscribers: BN:13489 2330 RT. |-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| c-Abl Kinase Regulates Curcumin-Induced Cell Death through Activation of c-Jun N-Terminal Kinase<br><i>Ravindra Kamath, Zhihua Jiang, Guoming Sun, Jack C. Yalowich, and R. Baskaran</i>                                                                                                                                                            | 61  |
| The Positional Influence of the Helical Geometry of the Heteroduplex Substrate on Human RNase H1 Catalysis<br><i>Walt F. Lima, John B. Rose, Josh G. Nichols, Hongjiang Wu, Michael T. Migawa, Tadeusz K. Wyrzykiewicz, Guillermo Vasquez, Eric E. Swayze, and Stanley T. Crooke</i>                                                                | 73  |
| Human RNase H1 Discriminates between Subtle Variations in the Structure of the Heteroduplex Substrate<br><i>Walt F. Lima, John B. Rose, Josh G. Nichols, Hongjiang Wu, Michael T. Migawa, Tadeusz K. Wyrzykiewicz, Andrew M. Siwkowski, and Stanley T. Crooke</i>                                                                                   | 83  |
| Amino Acid Residues in the P2X <sub>7</sub> Receptor that Mediate Differential Sensitivity to ATP and BzATP<br><i>Mark T. Young, Pablo Pelegrin, and Annmarie Surprenant</i>                                                                                                                                                                        | 92  |
| Down-Regulation of Inhibitor of Apoptosis Proteins by Deguelin Selectively Induces Apoptosis in Breast Cancer Cells<br><i>Xiang-Hong Peng, Prasanthi Karna, Ruth M. O'Regan, XiuJu Liu, Rajesh Naithani, Robert M. Moriarty, William C. Wood, Ho-Young Lee, and Lily Yang</i>                                                                       | 101 |
| Subunit-Specific Roles of Glycine-Binding Domains in Activation of NR1/NR3 N-Methyl-D-aspartate Receptors<br><i>Marc Awobuluyi, Jin Yang, Yuzhen Ye, Jon E. Chatterton, Adam Godzik, Stuart A. Lipton, and Dongxian Zhang</i>                                                                                                                       | 112 |
| Interaction of the $\mu$ -Opioid Receptor with Synaptophysin Influences Receptor Trafficking and Signaling<br><i>Ying-Jian Liang, Dai-Fei Wu, Li-Quan Yang, Volker Höllt, and Thomas Koch</i>                                                                                                                                                       | 123 |
| Estrogen Receptor Antagonist Fulvestrant (ICI 182,780) Inhibits the Anti-Inflammatory Effect of Glucocorticoids<br><i>Salvatore Cuzzocrea, Stefano Bruscoli, Concetta Crisafulli, Emanuela Mazzon, Massimiliano Agostini, Carmelo Muià, Emanuela Esposito, Rosa Di Virgilio, Rosaria Meli, Elisabetta Vegeto, Adriana Maggi, and Carlo Riccardi</i> | 132 |
| Role of Dioxin Response Element and Nuclear Factor- $\kappa$ B Motifs in 2,3,7,8-Tetrachlorodibenzo- <i>p</i> -dioxin-Mediated Regulation of Fas and Fas Ligand Expression<br><i>Narendra P. Singh, Mitzi Nagarkatti, and Prakash S. Nagarkatti</i>                                                                                                 | 145 |
| § In Silico Prediction of Pregnane X Receptor Activators by Machine Learning Approaches<br><i>C. Y. Ung, H. Li, C. W. Yap, and Y. Z. Chen</i>                                                                                                                                                                                                       | 158 |
| Identification of Small-Molecule Inhibitors of RGS4 Using a High-Throughput Flow Cytometry Protein Interaction Assay<br><i>David L. Roman, Jeffery N. Talbot, Rebecca A. Roof, Roger K. Sunahara, John R. Traynor, and Richard R. Neubig</i>                                                                                                        | 169 |
| Regulation of Human Cone Cyclic Nucleotide-Gated Channels by Endogenous Phospholipids and Exogenously Applied Phosphatidylinositol 3,4,5-Trisphosphate<br><i>Scott R. Bright, Elizabeth D. Rich, and Michael D. Varnum</i>                                                                                                                          | 176 |
| Independent Mechanistic Inhibition of Cdc25 Phosphatases by a Natural Product Caulibugulone<br><i>Marni Brisson, Caleb Foster, Peter Wipf, Beomjun Joo, Robert J. Tomko, Jr., Theresa Nguyen, and John S. Lazo</i>                                                                                                                                  | 184 |
| Motexafin Gadolinium-Induced Cell Death Correlates with Heme Oxygenase-1 Expression and Inhibition of P450 Reductase-Dependent Activities<br><i>John P. Evans, Fengyun Xu, Mint Sirisawad, Richard Miller, Louie Naumovski, and Paul R. Ortiz de Montellano</i>                                                                                     | 193 |
| Repression of Human GSTA1 by Interleukin-1 $\beta$ Is Mediated by Variant Hepatic Nuclear Factor-1C<br><i>Lorraine Ng, Kathleen Nichols, Kelly O'Rourke, Ann Maslen, and Gordon M. Kirby</i>                                                                                                                                                        | 201 |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |     |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| Embelin, an Inhibitor of X Chromosome-Linked Inhibitor-of-Apoptosis Protein, Blocks Nuclear Factor- $\kappa$ B (NF- $\kappa$ B) Signaling Pathway Leading to Suppression of NF- $\kappa$ B-Regulated Antiapoptotic and Metastatic Gene Products<br><i>Kwang Seok Ahn, Gautam Sethi, and Bharat B. Aggarwal</i>                                                                                                                                                                   | 209 |
| The Dietary Isothiocyanate Sulforaphane Is an Antagonist of the Human Steroid and Xenobiotic Nuclear Receptor<br><i>Changcheng Zhou, Emma-Jane Poulton, Felix Grün, Theo K. Bammler, Bruce Blumberg, Kenneth E. Thummel, and David L. Eaton</i>                                                                                                                                                                                                                                  | 220 |
| Amphetamine Induces a Calcium/Calmodulin-Dependent Protein Kinase II-Dependent Reduction in Norepinephrine Transporter Surface Expression Linked to Changes in Syntaxin 1A/Transporter Complexes<br><i>Concetta Dipace, Uhna Sung, Francesca Binda, Randy D. Blakely, and Aurelio Galli</i>                                                                                                                                                                                      | 230 |
| The Effect of Low pH on Breast Cancer Resistance Protein (ABCG2)-Mediated Transport of Methotrexate, 7-Hydroxymethotrexate, Methotrexate Diglutamate, Folic Acid, Mitoxantrone, Topotecan, and Resveratrol in In Vitro Drug Transport Models<br><i>Pauline Breedveld, Dick Pluim, Greta Cipriani, Femke Dahlhaus, Maria A. J. van Eijndhoven, Cornelia J. F. de Wolf, Annemieke Kuil, Jos H. Beijnen, George L. Scheffer, Gerrit Jansen, Piet Borst, and Jan H. M. Schellens</i> | 240 |
| Cellular Retinoic Acid Bioavailability Determines Epithelial Integrity: Role of Retinoic Acid Receptor $\alpha$ Agonists in Colitis<br><i>Makoto Osanai, Nami Nishikiori, Masaki Murata, Hideki Chiba, Takashi Kojima, and Norimasa Sawada</i>                                                                                                                                                                                                                                   | 250 |
| Human Chorionic Gonadotropin Modulates Prostate Cancer Cell Survival after Irradiation or HMG CoA Reductase Inhibitor Treatment<br><i>Adly Yacoub, William Hawkins, David Hanna, Hong Young, Margaret A. Park, Mark Grant, John D. Roberts, David T. Curiel, Paul B. Fisher, Kristoffer Valerie, Steven Grant, Michael P. Hagan, and Paul Dent</i>                                                                                                                               | 259 |
| Molecular Basis for the Antiproliferative Effect of Agmatine in Tumor Cells of Colonic, Hepatic, and Neuronal Origin<br><i>C. Wolf, M. Brüss, B. Hänisch, M. Göthert, I. von Kügelgen, and G. J. Molderings</i>                                                                                                                                                                                                                                                                  | 276 |
| Neurokinin 1 Receptors Trigger Overlapping Stimulation and Inhibition of Ca <sub>v</sub> 2.3 (R-Type) Calcium Channels<br><i>Ulises Meza, Ashish Thapliyal, Roger A. Bannister, and Brett A. Adams</i>                                                                                                                                                                                                                                                                           | 284 |
| Characterization of the Tritium-Labeled Analog of L-threo- $\beta$ -Benzyloxyaspartate Binding to Glutamate Transporters<br><i>Keiko Shimamoto, Yasuto Otsubo, Yasushi Shigeri, Yoshimi Yasuda-Kamatani, Masamichi Satoh, Shuji Kaneko, and Takayuki Nakagawa</i>                                                                                                                                                                                                                | 294 |
| Phosphorylation of G <sub><math>\alpha</math>11</sub> Protein Contributes to Agonist-Induced Desensitization of 5-HT <sub>2A</sub> Receptor Signaling<br><i>Ju Shi, Bozena Zemaitaitis, and Nancy A. Muma</i>                                                                                                                                                                                                                                                                    | 303 |
| RasGRP1 Confers the Phorbol Ester-Sensitive Phenotype to EL4 Lymphoma Cells<br><i>Shujie Han, Stewart M. Knoepp, Mark A. Hallman, and Kathryn E. Meier</i>                                                                                                                                                                                                                                                                                                                       | 314 |
| Short Polybasic Peptide Sequences Are Potent Inhibitors of PC5/6 and PC7: Use of Positional Scanning-Synthetic Peptide Combinatorial Libraries as a Tool for the Optimization of Inhibitory Sequences<br><i>Martin Fugere, Jon Appel, Richard A. Houghten, Iris Lindberg, and Robert Day</i>                                                                                                                                                                                     | 323 |
| Zoledronic Acid Activates the DNA S-Phase Checkpoint and Induces Osteosarcoma Cell Death Characterized by Apoptosis-Inducing Factor and Endonuclease-G Translocation Independently of p53 and Retinoblastoma Status<br><i>B. Ory, F. Blanchard, S. Battaglia, F. Gouin, F. Rédini, and D. Heymann</i>                                                                                                                                                                            | 333 |

|                                                                                                                                                                                                                                                                                                                                                                                      |     |
