# Comparison of Cognitive Performances During a Placebo Period and an Atypical Antipsychotic Treatment Period in Schizophrenia: Critical Examination of Confounds

Thomas W Weickert, Terry E Goldberg, Stefano Marenco, Llewellyn B Bigelow, Michael F Egan and Daniel R Weinberger

*Neuropsychopharmacology* (2003) 28, 2217. doi:10.1038/sj.npp.1300349

**Correction to:** *Neuropsychopharmacology* (2003) 28, 1491–1500. doi: 10.1038/sj.npp.1300216

Following publication of the above paper, the author has identified an error on page 1494. The correct statement should read as follows:

Results of a three-way repeated measures MANOVA on the whole sample of patients demonstrated no significant

effect of order (off then on *vs* on then off),  $F(1, 14) = 0.01$ ,  $p = 0.92$ , a significant main effect of drug status (on *vs* off),  $F(1, 14) = 5.18$ ,  $p < 0.04$ , no interaction between order and test,  $F(16, 224) = 0.14$ ,  $p = 1.00$ , and a significant interaction between drug status and test,  $F(16, 224) = 9.34$ ,  $p < 0.001$ .

Although the  $F$  values were originally incorrect, the previously published  $p$  values were correct, resulting in no change to the published interpretation.
