

Q: Which physical chemistry journal

has the support of
14 owner societies?

A: PCCP

- published by the RSC on behalf of thirteen other learned societies, it is a truly international journal. With fast publishing, top quality science and "frequency doubling" to weekly issues, you can be sure that science, not profit, is always at the top of the agenda.

Apply this PCCP Certainty Principle today!

Really readable reviews from Chem Soc Rev

Chem Soc Rev brings you a series of general interest reviews, carefully selected to give you an unrivalled overview of topical areas within the chemical sciences:

Chemical forensics: every contact leaves a trace

DNA profiling methods have revolutionised crime investigation by allowing identification of the source of human tissue, and fingerprints are an invaluable aid. But when this type of evidence is not available, what other methods can be used to find the answers?

Advances in chemistry applied to forensic science, D. F. Rendle, *Chem. Soc. Rev.*, 2005, **34**, 1021

Hidden Fingerprints

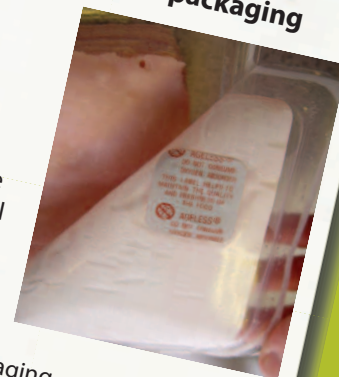

The continued importance of latent fingerprints as physical evidence in forensic science has created a demand for improved reagents for fingerprint development. The synthetic analogues reviewed here have shown that reagents with enhanced properties are still needed.

The development of novel ninhydrin analogues, D. B. Hansen and M. M. Joullie, *Chem. Soc. Rev.*, 2005, **34**, 408

Intelligent solutions for smart packaging

Chilling and storing in modified atmosphere packaging, MAP, (a low oxygen environment) extends the shelf life of foods. Detecting oxygen levels in MAPs is therefore key to the efficacy of novel packaging. New sensor technologies, including intelligent inks, reviewed here are likely to feature strongly in future smart packaging.

Oxygen indicators and intelligent inks for packaging food, A. Mills, *Chem. Soc. Rev.*, 2005, **34**, 1003
