Catalytic, Asymmetric Indolizidinone Aza-Quaternary Stereocenter Synthesis: Expedient Synthesis of the Cylindricine Alkaloids Core

Page 2346. (+)-CKphos is used for all experiments illustrated in Table 1, Figure 1, and eq 1, with the structure shown in Table 1 and Scheme 1. (–)-CKphos was used for the cylindricine synthesis in Table 2 and Scheme 3. The Supporting Information has also been updated. We regret the oversight.
