# EXCHANGE REACTIONS OF ACETALS WITH 1.3-OXATHIO AND 1.3-DITHIOCYCLANES

#### E.A.Kantor

Ufa Oil Institute, Ufa, USSR

Oxides, thioxy, oxythiols and dithiols were used as predecessors of heterocycles with sulphur atom in a ring. Substituted 1,3-oxathio- and 1,3-dithiocycloalkanes were obtained as a result of exchange reaction with acetals:

$$\frac{1}{1} + \frac{1}{1} = \frac{1}{1} + \frac{1}{1} = \frac{1}{1} + \frac{1}{1} = \frac{1}$$

$$m,n = 0,1,2$$
  
 $x = 0,S$ 

Basic kinetic parameters of the reaction were defined. It was found that the limiting stage is splitting heterocycle along carbon-heteroatom bond and reactivity value is proportional to the value of electron density on a heteroatom.
