The reaction of [(Me₃Si)₂N]₂S with an equimolar amount of SeCl₄ in CS₂ or CH₂Cl₂ at -70°C provides a route to 1,5-Se₂S₂N₄ in a good yield. When the reaction is carried out in dioxane at +50°C five membered heterocycle (SSe₂N₂Cl)₂ is formed. The product is identified and characterized using X-Ray diffraction, Raman spectroscopy, mass spectroscopy and NMR spectroscopy. ⁷⁷Se MAS NMR study of the 1,5-Se₂S₂N₄ is reported.

Keywords: Chalcogen-nitrogen-compounds; Raman spectroscopy; NMR spectroscopy; ⁷⁷Se MAS NMR; crystal structure

INTRODUCTION

We have recently prepared 1,5-Se₂S₂N₄ from equimolar amounts of [(Me₃Si)₂N]₂S and SeCl₄.^[1] The analogous reaction in dioxane at 50°C has been reported to produce a six-membered ring species, Se₂S₂N₂Cl₂.^[2] The reinvestigation of the reaction shows that the product is in fact (Se₂SN₂Cl)₂. It is identified using X-ray diffraction, Raman spectroscopy, NMR spectroscopy and mass spectroscopy.

$(\text{Se}_2\text{SN}_2\text{Cl})_2$ can also be obtained by the reaction of $[(\text{Me}_3\text{Si})_2\text{N}]_2\text{S}$ with 2:1 mixture of SeCl_4 and Se_2Cl_2 .^[1]

EXPERIMENTAL SECTION

All reactions were carried under an argon atmosphere. The solvents were dried by freshly distilling under a nitrogen atmosphere. 1,5- $\text{Se}_2\text{S}_2\text{N}_4$ was prepared by literature procedures.^[1]

Caution! The eight-membered $\text{Se}_2\text{S}_2\text{N}_4$ ring molecule is explosive when heated or subjected to mechanical stress.

Preparation of $(\text{Se}_2\text{SN}_2\text{Cl})_2$

A solution of $[(\text{Me}_3\text{Si})_2\text{N}]_2\text{S}$ (0.704 g, 2 mmol) in dioxane was added to a solution of SeCl_4 (0.442 g, 2 mmol) in dioxane at $+50^\circ\text{C}$. The reaction mixture was stirred for 7 hours at $+50^\circ\text{C}$.

RESULTS AND DISCUSSION

$(\text{Se}_2\text{SN}_2\text{Cl})_2$ is obtained as golden brown microcrystalline solid that is almost insoluble in organic solvents. Single crystals suitable for X-ray crystallography were grown from dioxane at r.t.

Crystal data: $(\text{Se}_2\text{SN}_2\text{Cl})_2$, orthorhombic, P_{bca} , $Z = 8$, $a = 8.5721(7)$, $b = 7.8336(6)$, $c = 15.228(1)$ Å, $V = 1022.55(13)$ Å³; $R = 0.0323$. Data were collected on a Nonius Kappa CCD diffractometer at 173 K using graphite monochromated MoK_α radiation by recording 360 frames via φ -rotation ($\Delta\varphi = 1^\circ$). The molecular structure of $(\text{Se}_2\text{SN}_2\text{Cl})_2$ is dimeric, which consists of two $\text{Se}_2\text{SN}_2\text{Cl}$ five membered rings (see Figure 1). Intermolecular $\text{Se}\cdots\text{Se}$ distances are 3.07 Å.

FIGURE 1 The molecular structure of $(\text{Se}_2\text{SN}_2\text{Cl})_2$.

The 12 eV mass spectrum of the product showed Se_2SN_2 (m/z 220) as the most abundant fragment. The ^{14}N NMR spectrum of the crude reaction mixture showed a single resonance at -52 ppm. The ^{77}Se NMR spectrum showed two resonances at 1394 ppm and 1407 ppm that are assigned to $(\text{Se}_2\text{SN}_2\text{Cl})_2$ and 1,5- $\text{Se}_2\text{S}_2\text{N}_4$ (c. f. 1418 ppm in CS_2)^[1] respectively.

The characteristic Raman vibrations of $(\text{Se}_2\text{SN}_2\text{Cl})_2$ occur at 980w, 951w, 627m, 470m, 359vw, 269vs, 240vw, 155w, 119vs. The Raman spectrum is in good agreement with that reported previously.^[3]

A. Haas *et al.* have proposed a reaction pathway to formation of Se_2SN_2 -ring from 1,5- $\text{Se}_2\text{S}_2\text{N}_4$.^[4] This route seems likely in a view of this work.

The ^{77}Se MAS NMR spectrum of 1,5- $\text{Se}_2\text{S}_2\text{N}_4$ shows two series of spinning sideband patterns with isotropic chemical shifts at 1455 ppm and 1409 ppm. Isotropic shifts were confirmed also in experiments with different spinning rates.

FIGURE 2 The molecular structure of 1,5-Se₂S₂N₄ showing intermolecular chalcogen...N secondary interactions. E(1), E(3): sof(Se) = 52 %; E(2), E(4): sof(Se) = 48 %. Sof(S_i) = 1 - sof(Se_i).

Observation of two signal series in ⁷⁷Se MAS spectrum is in agreement with the crystal structure. Chalcogen atom positions are not equivalent because of the secondary chalcogen...N interactions to neighbouring molecules (see Fig. 2).
