It is regretted that the sesquiterpene lactone, 3 β -hydroxy-4 α H-3-dihydrosantamarine-1 β -D-glucopyranoside (**3**), was reported to be a new compound. Unfortunately, the authors overlooked the fact that this compound had previously been isolated from *Taraxacum hallaisanensis* roots (D. S. Yang et al., *Arch. Pharmacol. Research* 1996, **19**, 507). Additionally, the structures of the compounds (**1–5**) were omitted from the printed version of the paper. The structures are shown below:
