## Bulletin

Vol. 32 No. 3

SEPTEMBER, 1956

Price 2/6 Monthly

**For MAXIMUM OUTPUT with MINIMUM HARMONICS**

**Use the Labgear LG 300 Mk II transmitter**

(150 watts, 10-80 m. bandswitched)

Leading Amateurs prefer the LG 300 Mk II equipment because they know that no other amateur band transmitter will put out such a potent signal with so little interference to the pleasure of others. When used with the Labgear E 5034 low-pass filter, correctly terminated, the residual harmonics in the T/V bands are over 100 db down with respect to the fundamental. This means that the T/V harmonic output is less than 0.015 MICRO-WATT.

**PLACE YOUR RESERVATION WITHOUT DELAY**

**Labgear (Cambridge) Ltd.** **WILLOW PLACE, CAMBRIDGE, ENG.**

# WIDE BAND SIGNAL GENERATOR

## Type T.F.M.

The design of this new Wide Band Signal Generator, operating throughout on fundamentals, is the outcome of considerable research and development work to meet the stringent requirements imposed by new frequency modulation and commercial television stations.

Fully descriptive  
brochure available  
on request.

### AM

#### COVERAGE

5-220 Mc/s in 8 ranges, CW or 400 c/s sine/square wave modulation. Accuracy  $\pm 1\%$ . Provision for spot frequency calibration.

### FM

#### COVERAGE

65-120 Mc/s. Accuracy  $\pm 1\%$ . Maximum deviation  $\pm 150$  Kc/s.

#### OUTPUT

Minimum (about  $2\mu\text{V}$ ) to 100 mV continuously variable with decade multiplier. Force output 250 mV.

#### OUTPUT IMPEDANCE:

80 $\Omega$ , 200 $\Omega$ , balanced 80 $\Omega$  and 300 $\Omega$ , isolated unbalanced 80 $\Omega$ .

#### OPERATING VOLTAGES:

100-120, 200-260V, 50-60 c/s A.C. mains.

LIST PRICE: £89

The frequency bands have been chosen in such a manner as to ensure maximum convenience when servicing and aligning T.V. and F.M. receivers.

Provision has been made for spot R.F. frequency calibration.

Facilities are provided to ensure adequate discrimination throughout the very wide frequency band covered by the instrument.

Sine and square wave audio frequency modulation provided.

The instrument is fitted with an R.F. carrier level meter.

A double-ratio slow-motion mechanism, together with interpolation dial, enables the instrument to be set with a high degree of accuracy. On the F.M. range an internal phasing control enables the modulating signal to be applied to the X-plates of an oscillograph to produce a picture of a discriminator response curve.

#### DIMENSIONS:

15 $\frac{1}{2}$  x 10 $\frac{1}{2}$  x 10 ins. approx. with lid closed.

WEIGHT: 16 lbs. approx.

Sole Proprietors and Manufacturers:

*The* AUTOMATIC COIL WINDER & ELECTRICAL EQUIPMENT CO., LTD.

AVOCET HOUSE • 92-96 VAUXHALL BRIDGE ROAD • LONDON • S.W.1

Telephone: VICTORIA 3404 (9 lines)

A new range of B7G, B8A and B9A valveholders designed for use with printed circuits. Fitted with 'pen-nib' type contacts, these valveholders have exceptionally short connections to the valve pins to reduce lead inductance.

- Moulded in Woodflour or Nylon loaded PF.
- Contact tails flux dipped for ease of soldering in automatic assembly.
- Screened or unscreened versions available.

### G2ACC offers you— A NEW 10th EDITION OF OUR ILLUSTRATED CATALOGUE 6d post free (U.K. ONLY)

56 pages, over 2,000 items, 135 photographic illustrations and technical data on brand new guaranteed components and communications receivers from the leading manufacturers including:—

Aerialite, Acos, Belling & Lee, Brown, Bulgin, Brimar, Collaro, Cossor, Clix, Colvern, Denco, Dubilier, Eddystone, Elac, Elstone, G.E.C., Hunts, J.B., Marconi, Mazda, McMurdo, Mullard, Q-Max, Radiospares, Raymart, Rothermel, Sorad, Taylor, T.C.C., Telcon, Woden, Westinghouse, etc.

In addition a complete list of Amateur Prefixes, Zones and Countries list, make this a very valuable reference book.

**Backed by Speedy, Reliable and Efficient Service**  
Brochures available free of charge on all Eddystone Communications Receivers including the new Amateur Band Receiver "888"

### Southern Radio & Electrical Supplies

So-Rad Works, Redlynch, Salisbury, Wilts.

### A REALLY SELECTIVE 5-VALVE SUPERHET

**139/6**

Plus 2/8 for  
Postage &  
Packing

Our "know how" shows you the easy way to surprise friends with this superb Superhet. **NO RADIO KNOWLEDGE NECESSARY** Easy to read step-by-step instructions and Diagrams. We guarantee it to work. Only tools needed are Pliers, Screwdriver and Soldering Iron.

#### IDEAL FOR BEGINNERS... A TRF

... Let us show you how simple a 3 Valve TRF Receiver can be to make our way and how amazed you will be. Easy-to-Follow instructions take the headaches out of construction. Hundreds already working all over the country. 109/6, plus 2/8 post and packing.

#### A PROFESSIONAL JOB MADE SIMPLE

Nothing to lose—Our MONEY-BACK guarantee covers you. Complete parts available for the above receivers in Cream or Brown cabinets... Write today and get started on the fascinating Hobby of Electronics.

EASY INSTRUCTIONS WITH OUR "KNOW-HOW" DIAGRAMS. 1/- POST FREE. SEND TODAY.

### TRANSMITTER/RECEIVER SCR 522

Comprising the well-known BC625 and BC624A Units complete with 17 valves types: 2-832, 3-12A6, 3-128GT, 3-9003, 9002, 6G6G, 12J5GT, 12AH7GT, 12C8, 6887. The Complete unit is in very good condition having very useful parts including Relays, Transformers, Condensers, etc.  
Less valves, £3/10/-, carr. paid.  
With valves, £7/10/-, carr. paid.

### INDICATOR UNIT TYPE 182A

Unit contains VCR517 Cathode Ray 6in. tube, complete with Mu-Metal screen, 3 EF50, 4 8P61 and 1 5U4G valves, 9 wire-wound volume controls and quantity of resistors and condensers. Offered BRAND NEW (see relay) at 67/6. Plus 7/6 carr. "Radio-Constructor" scope circuit included.

### PIRANI HIGH VACUUM TEST EQUIPMENT

Manufactured by "Pye" Cambridge Ltd., for Atomic Research Station. Comprising: Pirani Control Unit, Pirani Bridge Unit, Gauge head with calibrator, and Pye scale lamp galvanometer, all items brand new, in original packing. Offered at less than half original cost.

**£33-10-0**

complete

Spare Pirani Heads (Edwards M6) 15/-

### 62A INDICATOR UNIT

Containing VCR97 with Mu-Metal Screen. 21 Valves: 12-EP50, 4-8P61, 3-BA50, 2-EB34. Plus Pots, Switches, I.V. Cond., Resistors, Muirhead S/M Dial. Double Deck Chassis and Crystal. BRAND NEW ORIGINAL CASES, 67/6. Carr. 7/6.

### PYE 45 Mc/s STRIP TYPE 3583 UNITS

Size 15in. x 8in. x 2in. Complete with 45 Mc/s. Pye Strip, 12 valves, 10-EP50, EB34 and EA50, volume controls, and hosts of Resistors and Condensers. New condition. Modification data supplied.  
Price 69/6. Carriage paid.

## TRANSISTORS

(OFFERED AT LESS THAN HALF-PRICE)

Junction Type P.N.P. (Red-Spot)

These Junction Type Transistors are designed for audio-frequency application up to 800 kc/s, and are suitable for use in most transistor circuits including the following: Radio Control, Local Station Receivers, Signal Tracers, Oscillators, Transistor Voltmeters, Audio-Amplifiers, Microphone Pre-Amplifiers.

**10/- EACH**

(Tested and Complete with Data and Circuits).

### ELECTRICAL DATA

Maximum collector voltage—5 volts. Maximum collector current—10 mA. Peak collector voltage—5 volts. Maximum emitter current—10 mA. Maximum Power Dissipation—25 mW.

N.B. These Transistors may be used in place of Mullard OC71 or similar types.

R.F. TRANSISTORS (Blue-Spot) 1.6 Mc/s, 15/- each.

### MINIATURE COMPONENTS FOR TRANSISTOR CIRCUITS

	Each
Teleton Miniature Oscillator Coils ... ..	6/6
Teleton Miniature I.F.T.'s 315 kc/s ... ..	6/6
Ferrite Rod Double Wound ... ..	10/-
J.B. 2-Gang 375 P.F. Miniature Condenser ... ..	11/-
Fortiphone Sub-Miniature Intervalve Trans. ... ..	10/-
Fortiphone Sub-Miniature Intervalve Push-pull Trans. ... ..	12/6
Fortiphone Miniature Push-pull Intervalve Trans. ... ..	15/-
Fortiphone Miniature Push-pull Output Trans. ... ..	15/-
Miniature W/W 1,000 Ω V/Control ... ..	2/6
Miniature On/Off Slide Switch ... ..	1/6

Resistors and Condensers at usual low prices

### BUILD THE "TELETRON" TRANSISTOR SUPERHET

Kit of Parts complete with 4 transistors, I.F.T.'s 2-gang miniature condenser, ferrite rod, 3" P.M. speaker, V/C res. and cond. .... £6.10.0  
Or as above with push-pull output 6 transistors and 6x4 elliptical speaker.... £9.0.0

Brand New & Boxed

Ideal for Tape Recording, Gramophone Amplifier, etc. Very sensitive. Guaranteed and Tested.

### FERRANTI TESTVAC

High Speed Vacuum tester,  
200-250 A.C. .... £10 10 0

### MINIATURE TRANSMITTING STRIP "TYPE B1"

Size 7½in. x 6in. x 3in. Complete with Valves Type CV415, OV309, 2-6AM6, 2-7D9 and quartz Crystal, 4,860 kc/s. Fully wired with circuit.  
£4/10/- complete.

### MINIATURE I.F. STRIP TYPE "373" 9.72 MEG.

Brand new miniature I.F. Strip size 10½in. x 2½in. x 3in. high. Valve line-up: 2-EF92; 3-EF91 and EB91. With circuit.  
Price (less valves) 7/6, P. & P. 1/6.  
This I.F. Strip is part of above equipment.

### U.S.A. INDICATOR UNIT BC929A

Complete with 3BP1 C/R tube and screen 7 valves—2-68N7GT, 2-6H6GT, 6G6, 2X2, 6X50, volume controls, condensers, etc. Ideal for portable "scope. In black crackle case size 16½in. x 9in. x 9in. BRAND NEW, 65/-, carr. FREE.

### TRANSMITTER RECEIVER "38" WALKIE TALKIE SETS

Special offer of above set, complete with 5 valves, 4-AR12 and ATP4, with circuit. Range 7.4 to 9 Mc/s. These sets are not guaranteed but are serviceable.

25/-

Junction box, 2/6 extra.

### RF26 F.M. CONVERTER UNIT 88/100 Mc/s

This well-known RF26 Unit is now adaptable for F.M. reception using 2 i.f. stages and separate local oscillator and tuned by a Muirhead graduated vernier drive. Can be converted at low cost of 92/6. Send 1/6 for 8-page descriptive booklet containing full wiring instructions, circuits and layout diagrams.

WE HAVE OVER 50,000 BRITISH  
AND AMERICAN VALVES  
AVAILABLE AT VERY LOW  
PRICES — SEND FOR LISTS

# IF YOU WANT A GOOD Microphone

WITHOUT HAVING TO PAY TOO MUCH FOR IT

*What about one of these ?*

## MIC 33

A crystal microphone that fits the hand perfectly. For the high quality public address and tape recording field, incorporating a specially designed acoustic filter giving a flat response from 30 to 7,000 c/s.

RETAIL PRICE £2.10.0

## MIC 35

A general purpose hand microphone of robust construction and convenient "handling" qualities with substantially flat response from 50 to 5,000 c/s. Suitable for recording apparatus, Public Address equipment, etc.

RETAIL PRICE £1.5.0

*always well ahead*

ACOS devices are protected by patents, patent applications and registered designs in Great Britain and abroad.

## The New Telephony

IT was around about twenty years ago—when the G8s were beginning to be licensed—that telephony on the long-distance h.f. amateur bands started to become popular. Until then the Top Band had carried the bulk of amateur telephony working, and most of this was cross-town; for anything much over 50 miles telegraphy was the rule. As for telephony on 80 metres, this was virtually unknown. In those days “eighty” was a very exclusive band; permission to use it could be obtained only by a special dispensation from the Post Office, supported by a recommendation from the R.S.G.B. Anyone who wished to hear Amateur Radio operating at its very best—copper-plate Morse-sending coupled with good manners—would listen on 80 metres.

On the higher frequency bands, while a certain amount of telephony could generally be heard, the key held sway. There was a feeling abroad that “the true ham” used Morse for preference and that ‘phone was a little decadent—and certainly the proficiency that was developed bore out the contention that good Morse sending, coupled with the proper use of the recognized international and amateur abbreviations, allowed almost as much information to be transmitted in a given time via the key as via the microphone. Between two skilled operators, working a telegraphy QSO, an affinity of mind developed that never seemed to be experienced on a telephony circuit.

Nevertheless, the very considerable attractions of ‘phone working could not be denied, and around about that time, twenty years ago, increasing numbers of amateurs began to take it up. So rapid was its expansion that band planning schemes were felt to be necessary to segregate phone and c.w. stations for their mutual protection from interference by the other mode of transmission. Some of the band planning was voluntary; some of it was regularized on an official basis, giving rise to one or two curious anomalies, such as the establishment of an American ‘phone allocation right in the middle of the 14 Mc/s band that crowded most c.w. working into the l.f. end and wasted the h.f. end.

What worried the c.w. man at that time was the tremendous increase in interference caused by the growth of telephony operation. For in those days t.r.f. receivers—or even “straight threes”—were the rule and the superhet was regarded as either too expensive or too complicated (or both) for the average amateur. A reactive straight receiver worked admirably on c.w. but was of little use on telephony under the conditions of growing interference. It was not surprising that the communications superhet soon became a “must”—cost and complexity notwithstanding—in the years just before the war. Then

it was that the horny-handed, hard-bitten brass-pounder observed to his horror the growth of a new race of amateur operator—the man who tuned his receiver without the b.f.o. on!

The development of the communications superhet was a useful but only temporary antidote to the growth of interference in the narrow amateur frequency allocations. Useful though it is, it has its limitations when it is called upon to resolve some intelligibility from the chaos of the telephony segments of the bands at a time when ‘phone is in more widespread use than ever before. When dealing with c.w. it delivers as good an account of itself as ever it did by reason of its ability to operate in the single signal mode; the listener hears only *one* side of the squeak. The other sideband is virtually suppressed.

Applying this receiving technique to an ordinary double sideband telephony signal, however, produces a horrible sounding result that quite defeats the feeling of aural comfort which is such an important ingredient in enjoyable ‘phone working. The problem can be solved by tackling it the other way about. Do not ask the receiver to apply a telegraphy degree of selectivity to a telephony signal. Instead, arrange for the transmitter to do the job, by radiating only *one* sideband instead of two. Already many hundreds of amateurs have done precisely this. They are the s.s.b. enthusiasts and there should be many more of them.

The thought may be ventured that double sideband telephony working on crowded communication bands will prove, in time, to be as archaic as those non-superhet receivers of twenty years ago turned out to be. Professional agencies, less goaded by interference than is the amateur, have found single sideband phone to be a desirable proposition. In amateur phone bands it is rapidly becoming an essential one.

The spirit of *laissez faire* will doubtless prevent many amateur telephony operators from taking an active interest in s.s.b. until a series of spoiled QSOs compels it—or indeed until the preponderance of s.s.b. stations means that “you’ve got to go s.s.b. to find anyone to talk to!” This state of affairs may very well materialise fairly rapidly when more and more operators come to recognize that adapting a transmitter to single sideband working is probably less difficult than the job of making it TVI-proof.

“Going s.s.b.” is not to venture into uncharted territory. The literature on the subject in the BULLETIN has been profuse over a period of years—and it is encouraging to note that contemporaries are now showing an interest in it.

The motto of any S.S.B. Club which might be formed in the future could be: “Two may speak in the space of one”. The quicker the ‘phone bands reach that desirable state of affairs the better.—J.H.

# A Modern Transmitter for the Amateur

Full Power Design for 3.5 to 28 Mc/s

BY N. SHIRES (G3BTM)\*

A rear view of the transmitter using a commercial wideband coupler unit. Details for winding the coupler coils at home are given in the text. The modified pi-network coil L5 is at the extreme right with the transformer T1 at the lower right.

IF full advantage is to be taken of the high frequency allocations available to the amateur the requirements of the transmitter are quite stringent. The time has long passed, unless operating is confined to the small hours, when a few pieces from the junk box were sufficient to put one "on the air." On the other hand it should be possible to get good results without the use of elaborate test gear and a highly equipped workshop.

The cost of suitable equipment makes it necessary to obtain the maximum use from a transmitter which should, therefore, permit the use of as many licensed modes of radiation as possible on the bands it is designed to cover. One transmitter is generally accepted as being sufficient to cover the bands from 3.5 to 28 Mc/s and the design to be described is based on this idea. Two models, one rack mounted, and the other a table topper have been built using the circuit shown with entirely different component arrangements. Equally good results have been obtained from each proving that if the general principles that have been laid down by many writers are followed, trouble-free operation is assured.

The power requirements are modest being 1000V at 180 mA maximum, 350-400 at 120 mA maximum, 10V at 5A, and 6.3V at 3A.

## Description

As the v.f.o. for this unit is called upon to provide drive for c.w., n.b.f.m. and a.m. together with space for the associated keying and control circuits, it is not a practical proposition to include it on the same chassis as the rest of the transmitter. The first stage (V1 in Fig. 1), therefore, is a 6AM6 isolating amplifier which is fed from the oscillator via 80 ohm coaxial cable. The power required at this point is not more than 20 mW (a little

over 1 volt in 80 ohms); the output is sufficient to supply full excitation to the grid of V5 on all bands.

V2 and V3 are frequency multipliers which (via S1) drive the buffer amplifier with the required output frequency. Low-mu triodes (12AU7s) were chosen for V2 and V3 as they lend themselves to an even output when used in conjunction with wideband couplers. Higher gain valves are not warranted in this application as in the interests of TVI reduction, all frequency multiplying stages should run at the lowest possible input power. Nevertheless, the drive obtained is adequate. The switch section S1G reduces the current through V2b, V3a, and V3b when these valves are not in use by introducing additional cathode resistance. V4, a 5B/254M, which is a tetrode with generally better characteristics than the 807 and a B8G base, has a potentiometer in the screen supply which controls the drive to the final stage. V5 is an 813, and with 5-8 mA drive 150 watts input can easily be achieved. Considerably more drive is available but no further output is obtained by exceeding this figure. Excessive drive causes the level of unwanted harmonics in the output to rise.

## List of Components for Fig. 1

- C1, 6, 7, 18, 19, 20, 27, 29, 30, 100pF (T.C.C. type CC31Y).
  - C2, 9, 10, 11, 12, 15, 22, 26, 28, 1000pF mica.
  - C3, 21, 50pF (T.C.C. type CC31Y).
  - C4, 10-100pF (T.C.C. type TCK1010).
  - C5, 150pF (Eddystone).
  - C13, 200pF (Cylodon).
  - C14, 1000pF (Receiver type 500pF twin-gang with sections in parallel).
  - C23, 24, 25, 3 30pF Philips concentric trimmers.
  - C31, 32, 500pF 5Kv wkg.
  - C33, 500pF mica.
  - C34, 35, 36, 37, 38, 39, 40, are in the wideband coupler unit and with the exception of C35 are 50pF. The value of C35 will vary with the design of the coupler.
  - C41, 4μF 500 V.D.C.
  - C42, 6μF 500 V.D.C.
  - C43, 44, 0.01μF (T.C.C. type 543).
  - L7, 9H 100 mA.
  - L8, 9H 20 mA.
  - L9, 10, 2 amp TV chokes (T.C.C.).
  - R1, 7, 11, 12, 4.7 K ohms.
  - R2, 4, 6, 9, 10, 560 ohms.
  - R3, 5, 8, 13, 14, 22K ohms.
  - R15, 10K ohms (Erie type 2).
  - R16, 470K ohms.
  - R17, 68 ohms.
  - R18, 33 ohms.
  - R19, 560 ohms (Erie type 2).
  - R20, 10K ohms.
  - R21, 50K ohms.
  - R22, 5K ohms (Erie type 2).
  - R23, 2K ohms 10 watts\*.
  - R24, 50K ohms 20 watts.
  - VR1, 50K 3 watts.
- All resistors are Erie 20 per cent tolerance type 8 unless otherwise specified.
- \*R23 will require adjusting if the h.t. available is not 390 volts.
- RFC1, 2, 3, 2.5 mH (Eddystone).
  - S1, 5 way 7 bank (Yaxley).
  - S2, 5 way 1 bank ceramic.
  - S3, 2 pole single way toggle (Bulgin).
  - T1, 350-0-350V, 100 mA, 4V 2.5A.
  - T2, 10V 5A, 6.3V 6A.
  - V1, 6AM6 (Brimar).
  - V2, 3, 12AU7 (Brimar).
  - V4, 5B/254M (S.T.C.).
  - V5, 813 (S.T.C.).
  - V6, 5B/255M (S.T.C.).
  - V7, 8, 9, VR150/30 (Brimar).

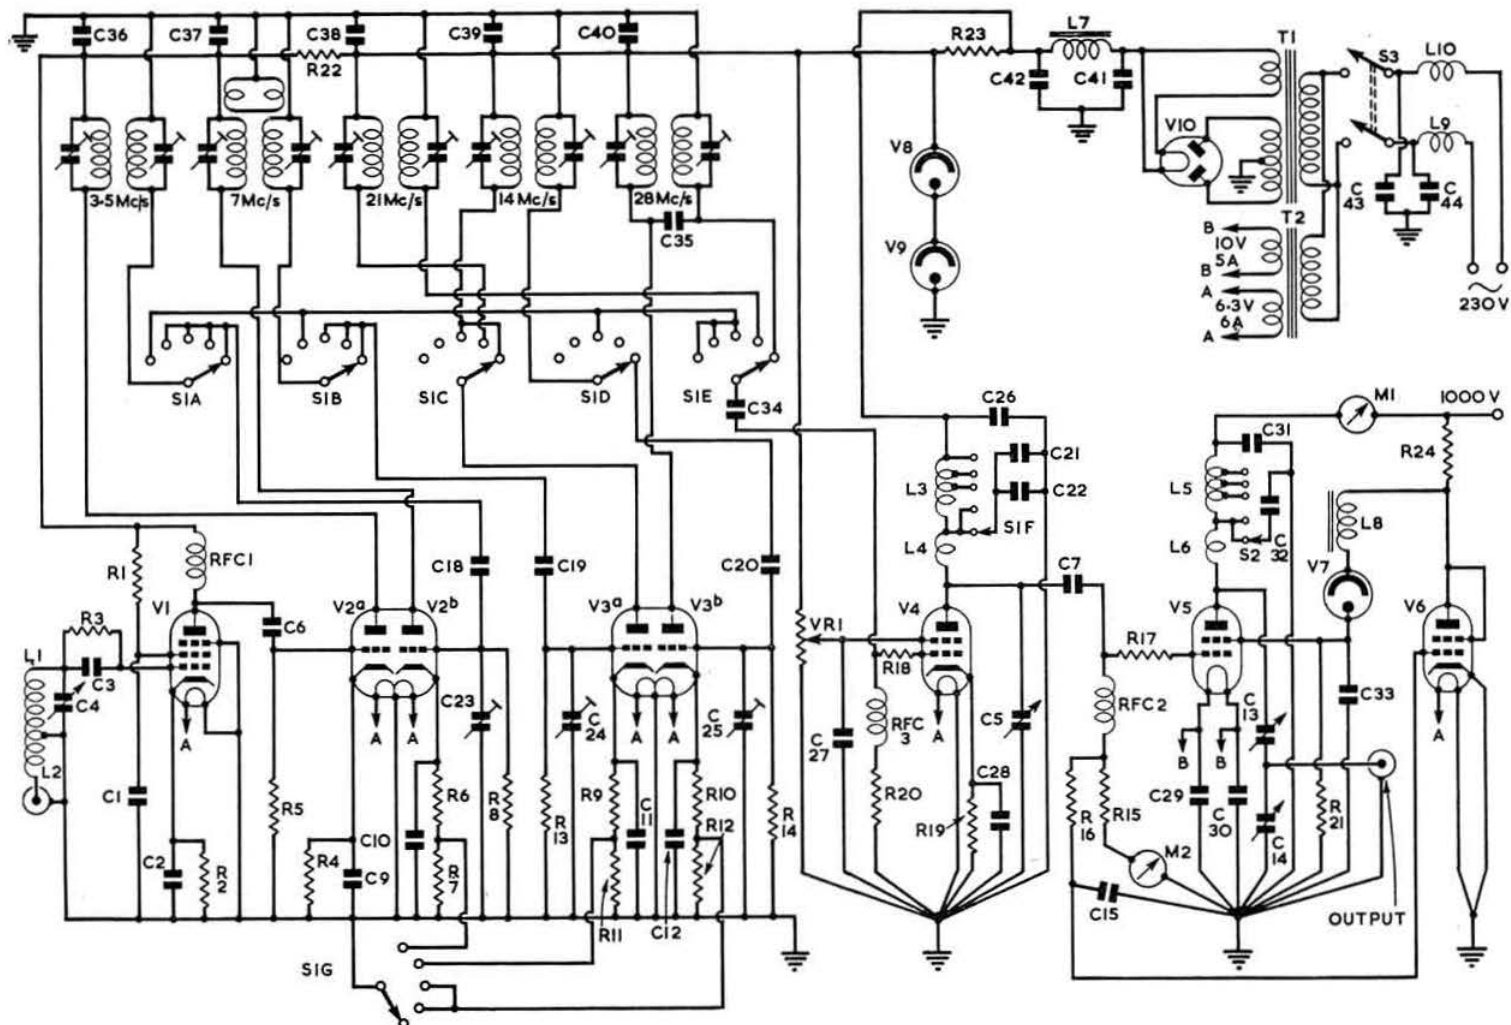

Fig. 1. Circuit diagram of the modern transmitter for the amateur using an 813 in the power amplifier stage.  
(Note : Switch S1G should be shown as the progressively shorting type.)

The method found to give the best results when setting up the grid drive to V5 is as follows. After loading to the required power input reduce the grid excitation until the r.f. output commences to fall, and then increase drive to the point where maximum output is just realised.

V6, a 5B/255M, is the clamp valve and in conjunction with V7 reduces the screen voltage on V5 to zero when no drive is supplied.

V7 with L8 serves to shape the c.w. waveform in the following manner. When the clamp valve (V6) is taking maximum current V7 is extinguished the potential on the screen of V5 is zero and the anode current is about 10 mA. When drive is applied from the v.f.o. initially all subsequent stages are altering their operating conditions as the various grid voltages build up. This build-up period is one in which transients are frequently generated and appear in the output as clicks. Until the drive is sufficient to raise the potential of the clamp valve anode above the striking voltage of the stabilizer (V7) the final is cut off and the clicks are not radiated. Rapid growth of the screen current is prevented by the choke L8 and the leading edge of the signal is nicely rounded. The slow decay of drive, if it occurs, is also masked by the stabilizer ceasing to conduct a short time before the grid voltage falls to a very low value. Clamp controlled amplifiers often become momentarily unstable at this point and in the worst cases a slight rise in anode current occurs in the output stage before it becomes quiescent.

### Construction

In the interest of screening the complete unit is contained in a metal cabinet 16in. by 12in. by 13in. The steel chassis is 15in. by 12in. by 3in. which is about the minimum for an easily worked layout. The arrangement of the major components is shown in Fig. 2. The valves V1 to V4 are mounted from front to rear of the chassis along one side with the associated components on a long groupboard arranged parallel with them. Beneath this groupboard are the connections to the wideband couplers, a method of wiring that maintains the short leads so necessary for stability. The reason for using groupboards in this case was that it lent itself readily to changes of components for experimental purposes. A smaller groupboard carries components in the circuits of V5, V6 and V7.

The low level of power in the early stages reduces the risk of radiation to negligible proportions and the use of wideband couplers tends to suppress the amplitude of unwanted products in subsequent stages. In the original driver unit which was rack mounted and separated from the p.a., the wideband couplers were made from Govern-

ment surplus material. Unfortunately these couplers with their switching occupied more space than was available and a commercial set of couplers has been fitted to the latest model. The efficiency of the home produced units was comparable with the commercial product and the question of whether to buy or build is left to the reader.

Details are given in Table 1 to enable the couplers to be made at home if desired. The main departure from normal practice is that both coils are on the same former and the passband is controlled by the spacing between them. If the data given are followed closely ample bandwidth will be obtained. Screening between the couplers when using triodes has been found unnecessary and this

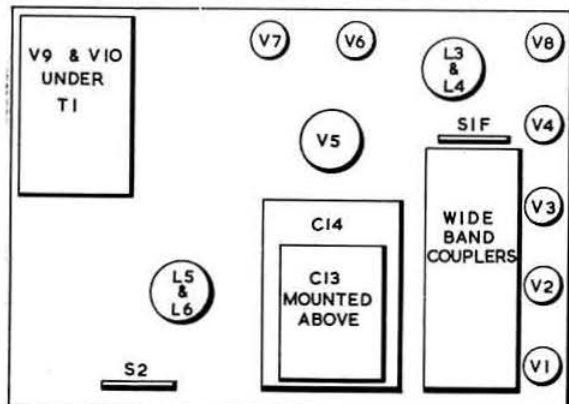

Fig. 2. Layout of the principal components. This diagram should be compared with the photograph.

should also hold good for pentodes. In the circuit diagram (Fig. 1) the component values associated with the couplers are suitable for either home constructed or commercial units.

The transformer T1 is mounted above the chassis at the rear with V10, L7, C41, and C42 located underneath. T2 is bolted to the side of the case and connected to the chassis wiring by a flexible cord and plug. The sketch plan Fig. 2 shows clearly the layout of components on top of the chassis. Mounting C13 above C14 was to conserve space only.

All wiring except that carrying r.f. is screened with the band bonded to earth at all convenient points, a practice which does much to prevent stray coupling and in turn

Table 1

instability as well as helping to reduce harmonic radiation. All the inductances are hand wound and the type of former used can be governed by what is to hand. The details of those used by the writer are given in Table 2.

L5 is tapped (counting from the h.t. feed end) at 14 turns for 7 Mc/s, 21 turns for 14 Mc/s and at the junction with L6 for 21 and 28 Mc/s. The whole of L5 and L6 is used for 3.5 Mc/s. L4 and L6 are mounted at right angles to L3 and L5 respectively to reduce the coupling between them to a minimum and improve the efficiency at the higher frequencies. To prevent the movement of the turns it is advisable to secure them in place with Denfix polystyrene cement.

The method of switching in the anode circuit of V4 and V5 has an advantage over the conventional pi-coupler in that no r.f. choke is required. A further point in favour is that no shorted turns appear within the r.f. loop to cause losses of output power.

The position of the front panel controls is governed by the component layout on the chassis. No attempt has been made to obtain a symmetrical arrangement.

### Setting-up

First insert a meter between the bottom of R20 and earth. Switch on all supplies except the 1000V h.t. supply with VR1 to minimum. Set the switch S1 to the 3.5 Mc/s position and apply drive to V1 via an 80 ohm line. Do not overdrive the first stage as no increase of output will result and the consequent squaring of the waveform at either anode or grid will cause unwanted harmonics to appear in the signal. Adjust the first coupler to give a constant drive to the grid of V4 as indicated on the meter over the band 3.5-3.8 Mc/s. It should be emphasized at this point that the signal source power output must be reasonably constant over the frequency range to ensure correct adjustment of the couplers. Oscillators of the Clapp variety are usually unsatisfactory for this purpose unless carefully designed. A circuit of an easily made measuring set for checking this level is shown in Fig. 3, and a short description appears below. Having obtained a satisfactory condition on 3.5 Mc/s S1 should be turned to the 7 Mc/s position and the second coupler adjusted in the same way. After this the procedure is repeated on each band. Care should be taken to ensure that no more bandwidth is allowed than is necessary to cover each subsequent band.

The next operation is to set up C23, C24 and C25 for constant drive level into the following multiplier over its frequency range. These condensers are to compensate for the added capacity in the coupler due to the grid lead of V4 through S1.

To make this correction it is necessary to open in turn the earthy end of R8, R13 and R14, and adjust each condenser for the best results. When this has been done it is desirable to go through the adjustments to the couplers again and seal them in the optimum position. This rather lengthy process is well worth careful attention as it adds much to the performance of the unit.

The expected drive at the grid of V4 is in excess of 2 mA on all bands. As this is more than the requirements of the buffer valve no difficulty will be found in driving the final stage sufficiently hard to attain the required input.

The whole unit can now be tested for stability in the following manner. A 50K resistor is placed across V7 (the valve can be removed and the resistor leads pushed into the valve socket connections). Switch on all supplies, remove the drive with VR1 at maximum and note the feed currents to the grid and anode of V5, C5, C13, and C14 should then be swung to various positions in relation to each other. No variation of grid or anode current

should occur in V5. It should be possible to remove R17 and R18 without any instability occurring, but they must not be left out of circuit as they are a safeguard. Only when complete stability has been proved can the setting up of the final stage be completed. The requirements are a resistive load of value equal to the output coax characteristic impedance and preferably of sufficient power rating to take the full output (100 watts). If a lower wattage is to be used the screen voltage on the final must be adjusted to limit the output to accommodate the smaller figure. In addition an r.f. ammeter is required—a small type shunted will do as the measurements are comparative only. It should be borne in mind that the current will be in the region of 1-1.5A.

Place the resistor across the coax output in series with the ammeter, switch on all supplies with S1 and S2 in the 3.5 Mc/s position and C14 at maximum. Apply drive and tune C13 for minimum current to V5, adjust C14 for maximum current in the load resistor and re-tune

Lecture 6.30 p.m.

C13 if necessary. Adjust the drive to V5 with the aid of VR1. Note the setting of C14. It is important that this position be exactly the same when an aerial is attached to the output. If the loading will not agree with that obtained with the load resistor it is the aerial circuit or coupling arrangement which is at fault. This statement is equally true when using a conventional pi-coupler. An adjustment of C14 to accommodate an aerial fed through a coaxial line will rarely lead to more useful power output and will certainly result in more heat losses. Another important consideration is that if a low-pass filter is used it may be damaged by high voltages caused by standing waves. A record of the setting of C14 on each band should be kept for reference.

The approximate cathode current to the valves when the unit is switched to 28 Mc/s are shown below. They will vary slightly on the other bands due to reduction of frequency.

V1	6 mA	V2a	5 mA	V2b	6 mA
V3a	8 mA	V3b	7 mA	V4	38 mA

V5 anode current will depend on the loading required but should be in the region of 150 mA.

If the high voltage required for the 813 is not available or the power required is below the maximum permitted very good efficiency can be obtained by using two 5B/254M valves in parallel as a final stage. The low internal capacities of this type of valve makes for a very useful output with excellent stability. The maker's maximum h.t. rating in this application is 475 volts when anode and screen modulated. 807s or QV06/20s could also be used.

It is hoped to supply details of a suitable modulator and v.f.o. for use in conjunction with this unit in later articles.

(continued on page 122)

# The Adjustment and Monitoring of Telephony Transmitters

## Test Equipment Needed

BY G. L. BENBOW, M.Sc., A.M.I.E.E. (ex-G3HB)\*

THE importance of thoroughly checking the overall performance of a telephony transmitter cannot be overemphasised. Unfortunately it is a task which can present considerable difficulties, especially in the case of a transmitter designed for the power limit of 150 watts. Nevertheless, it should be the aim of every amateur to test his modulator as far as his facilities will allow before applying its output to the transmitter and also to test the complete system on some form of dummy load before using it to radiate a signal.

The principal tests which should be applied to any telephony system are as follows:

- (1) On the modulator alone.
  - (a) Hum level.
  - (b) Fidelity (i.e. absence of distortion).
  - (c) Maximum undistorted power output.
  - (d) Gain/frequency characteristic or variation of performance over the frequency range.
- (2) On the complete system.
  - (a) Depth of modulation.
  - (b) Overall fidelity.

### Testing the Modulator

Having thoroughly checked the wiring of the modulator, the h.t. can be applied and the voltage at the various electrodes of each valve may be measured with a high resistance voltmeter (sensitivity at least 1000 ohms per volt) and compared with the design figures. It must be pointed out here, that on no account should the h.t. voltage be applied to the output stage unless it has a suitable load. This should be a resistor, preferably non-inductive, with a wattage dissipation at least equal to the expected power output. It should be approximately equal to the modulating impedance of the r.f. stage or alternatively of such a value that it can be matched to the output impedance of the modulator by suitable adjustment of the taps of a multi-ratio modulation transformer.

Fig. 1. Ideal arrangement for performance checking of modulator.

The ideal set-up for the overall performance checking of any audio amplifier is shown in Fig. 1. A signal of known frequency and amplitude is fed into the modulator from the a.f. oscillator. The modulator output is dissipated in the resistive load  $R$ , the voltage across the load being measured by the voltmeter  $V$ . This must be an a.c. voltmeter, suitable for use at audio frequencies. A multi-range test meter is generally suitable for this purpose. A preliminary calculation to find the order of the voltage to be expected is advisable, as the voltage may quite easily be more than 750 volts. It will be found convenient to plot a graph showing the output in watts against the voltmeter reading for a given load resistance. The output waveform is observed on the cathode ray oscilloscope, which is tapped down the load to avoid overloading it.

If such an arrangement is available, the performance of the modulator may be checked in a very short time.

The maximum power output is quickly found by increasing the gain control until distortion becomes apparent on the output waveform. With the gain control at this setting and no input, the residual hum on the output may be seen on the 'scope and also measured. The hum level should be less than 0.5 per cent of the output. If it is more than this, then the oscilloscope should be applied to the output of each stage in turn starting from the output end, so that the origin of the hum may be traced.

The use of a variable frequency source enables the gain at different frequencies to be measured hence the characteristics of the low-pass filter, if used, may be found. The overall distortion may be estimated by applying the oscilloscope to the output and input of the modulator in turn, making suitable adjustment to the oscilloscope amplifier gain in order to obtain the same sized trace in each case. The comparison is best made by tracing one waveform and holding the trace over the other waveform.

A somewhat easier method of estimating distortion is to apply the input and output of the modulator to the horizontal and vertical deflector plates of the oscilloscope, with the internal time base inoperative. This test requires separate horizontal and vertical amplifiers, the gains of which should be adjusted to give equal vertical and horizontal lines in the absence of the other. The resulting pattern, in the absence of phase shift in the modulator, is a straight line, at an angle of  $45^\circ$  to the horizontal and vertical axes. The presence of phase shift causes the straight line to open out into an ellipse. Distortion in the modulator shows up as a slight curving at the ends of the straight line or ellipse. The straight line will slope to the right or the left according to whether there is an odd or an even number of valves in the modulator, i.e. whether the phase change across the modulator is  $0^\circ$  or  $180^\circ$ . These patterns are shown in Fig. 2.

Fig. 2. Patterns produced by applying the input and output of the modulator to the X and Y plates of an oscilloscope. A—No phase shift or distortion; B—Slight phase shift; C—Phase shift and distortion.

Before embarking on tests such as these, it is advisable to examine the output waveform of the a.f. source and also to check whether the oscilloscope amplifiers produce any distortion.

This, as mentioned earlier, is the ideal method of amplifier testing, but it is realised that many amateurs do not have access to a C.R.O. and a.f. signal source, and therefore simpler methods must be used. However, the serious telephony worker is well advised to undertake the construction of an oscilloscope and audio oscillator.

The output of the modulator may be quite satisfactorily monitored by means of a pair of headphones, connected across a low resistance in series with the load resistor as shown in Fig. 3. The value of  $r$  should be adjusted to give comfortable listening strength in the headphones—generally two or three ohms is sufficient. As a safety precaution, one side of the headphones should be earthed.

\* 81 Anglesmede Crescent, Pinner, Middlesex

There are several convenient alternative signal sources which may be used for test purposes. If a gramophone pick-up is available, then a gliding frequency record is a worthwhile investment. Such records are available from most of the record companies and provide a source of

Fig. 3. Alternative method of monitoring modulator output by means of headphones.

accurately known frequency. Another possibility is the use of a simple receiver tuned to a B.B.C. programme. The circuit of a very simple audio oscillator is given in Fig. 4. The inductance  $L$  must be centre-tapped; if such a choke is not available a small 10 H 60 mA smoothing choke may be pressed into service. These are generally wound without end cheeks and have an inductance of the order of 0.1 to 0.5 H with the stampings removed. The centre tap may be made by carefully pulling out with a pair of tweezers the end turn of a layer of the winding around the centre point. The frequency of oscillation may be changed by switching in various values of capacitance, the values required being found by "trial and error." The frequency calibration may be carried out as described in "Single Sideband Technique," Part VI, R.S.G.B. BULLETIN, May 1956, page 464.

Using simplified apparatus, as described above, quite an accurate appraisal of the performance of a modulator may be made. As the estimation of distortion is an aural one, the accuracy achieved depends to a large extent on the sharpness of the experimenter's ear.

Fig. 4. Simple audio oscillator suitable for use as a signal source for modulator testing. C1, 0.001  $\mu$ F; C2, 0.0005  $\mu$ F; C3, 0.1  $\mu$ F; C4, 5, see text; R1, 100K ohms  $\frac{1}{2}$  watt; R2, 1K ohms  $\frac{1}{2}$  watt; R3, 33K ohms  $\frac{1}{2}$  watt; R4, 250K ohms (output control); V, EF50.

#### Testing the Complete System

Before applying the output of the modulator to the transmitter, it is essential to make certain that the stage which is to be modulated is itself operating satisfactorily. Neutralization, if used, must be as good as possible. The approximately correct values of grid bias and grid drive should be applied, and the aerial coupling must be adjusted so that the stage is drawing the required anode current. This ensures that the modulating impedance is the correct value. Better smoothing of the h.t. supply to the r.f. stage is required for telephony operation than for c.w. operation alone. For anode modulation about 50 per cent more grid drive is required than for c.w. conditions. As suggested earlier, the first trials of any telephony transmitter should be done on some form of artificial aerial to avoid causing unnecessary interference to other stations.

When it is clear that the r.f. stage is operating satisfactorily, the modulation may be applied and increased up to the maximum of which the system in use is capable. In the case of anode modulation this is 100 per cent but for the various forms of grid modulation the modulation depth should be restricted to about 75 to 80 per cent to avoid distortion.

#### Measurement of the Depth of Modulation

As always, the most useful tool for this job is the cathode ray oscillograph, as its use enables a quick visual check of the modulation depth to be made. There are two distinct methods of measuring modulation depth by means of the oscillograph: one requires a time base while the other does not.

The simplest method which does not require a time base is shown in Fig. 5. A small fraction of the modulated output is fed by means of a pick-up loop loosely coupled to the output tank circuit to the Y plates of the oscilloscope. Likewise the a.f. modulating voltage is fed

Fig. 5. Modulation checking by oscilloscope without use of time base.

to the X plates. On modulation a trapezoidal or wedge shaped pattern is produced on the screen. Fig 6 shows the variations in this pattern for various conditions. For 100 per cent modulation the pattern produced is a triangle. The modulation depth is calculated from the expression,

$$\text{Modulation Depth} = \frac{A-B}{A+B} \times 100 \text{ per cent}$$

where  $A$  and  $B$  are the lengths of the vertical sides of the pattern.  $A$  and  $B$  can be measured with reasonable accuracy by means of a pair of dividers.

Fig. 6. Patterns produced by the arrangement shown in Fig. 5. A—Carrier alone; B—Less than 100 per cent modulation; C—100 per cent modulation; D—Overmodulation.

This method also presents an easier method of checking the overall performance in addition to the measurement of modulation depth. If the operating conditions are correct, the sloping sides of the trapezoid will be perfectly straight. Curvature of these sides indicates non-linearity. Typical patterns for various fault conditions for both anode and grid modulation are shown in Figs. 7 and 8.

In view of the simplicity of the apparatus, only a cathode ray tube, which may be a small 2  $\frac{1}{2}$  in. tube, and its associated power supply is required. This is a particularly attractive method of performance checking. The whole apparatus can be very conveniently built up on a 3 in. meter panel for rack mounting.

The alternative method which requires an oscilloscope with a time base produces the envelope of the modulated wave on the screen. In the set-up shown in Fig. 9 the modulated r.f. voltage is applied to the Y plates of the oscilloscope either by a pick-up loop or directly from a tuned circuit. The patterns produced for various conditions are shown in Fig. 10. The depth of modulation may be found from the relation:—

$$\text{Modulation Depth} = \frac{Y-X}{X} \times 100 \text{ per cent}$$

The patterns resulting from incorrect operation are more difficult to interpret and for this reason the other system is to be recommended.

Whichever system is used, optimum results are obtained with constant sinusoidal input to the modulator. The loud sustained whistle into the microphone cannot be reproduced with sufficient accuracy to enable precise measurements to be made.

Fig. 7. Fault conditions, anode modulation. A—Drive too low; B—Overmodulation; C—P.A. unstable; D—Incorrect matching of p.a. to modulator

#### Alternative Methods of Modulation Depth Measurement

In the absence of a cathode ray oscillograph, the most convenient way of measuring the depth of modulation is to measure the aerial current with and without modulation. The relationship between the modulated and unmodulated aerial currents is

$$I_m = I_o \sqrt{1 + \frac{m^2}{2}}$$

This may be rearranged thus

$$m = \sqrt{2 \left[ \left( \frac{I_m}{I_o} \right)^2 - 1 \right]}$$

Fig. 8. Fault conditions, grid modulation. A—Drive too high; B—Overmodulation; C—P.A. insufficiently loaded.

Hence the modulation index  $m$  may be calculated from the ratio of the modulated and unmodulated aerial currents. It should be noted that for 100 per cent modulation or a modulation index of 1, the increase in aerial current is 22.6 per cent.

In an anode modulated system, the modulation percent-

Fig. 9. Modulation checking by oscilloscope with time base using speech input.

age may be estimated by measuring, preferably with an electrostatic voltmeter, the voltage across the modulation choke or the secondary of the modulation transformer. Knowing the unmodulated anode voltage of the class C amplifier, the modulation percentage can be calculated from the following formula:

$$\text{Modulation Percentage} = \frac{\text{Secondary or Choke Volts}}{\text{Amplifier Volts}} \times 141.4.$$

The values given in this section presume the use of a sine-wave input. In the case of speech the average aerial current rise, or modulation voltage will be perhaps only one-third of these values for 100 per cent modulation on peaks.

Fig. 10. Patterns produced by the arrangement shown in Fig. 9. A—Carrier alone; B—Less than 100 per cent modulation; C—100 per cent modulation; D—Overmodulation.

#### Modulation Monitors and Over-modulation Indicators

Whilst it may be argued that it is not necessary to be able to measure at any time the exact depth of modulation, some indication of the presence of over-modulation is essential. There are several ways of doing this. In a class B or class AB2 modulator there is an appreciable variation of modulator anode current. If a red mark is made on the modulator anode current meter scale corresponding to 100 per cent modulation, then the gain control should never be advanced far enough to cause the anode current to swing above this value. Likewise, a high resistance a.c. voltmeter connected to the output of one stage of the modulator may be calibrated to show the voltage at that point corresponding to full modulation.

As the average anode current of a linearly modulated amplifier is constant, the reading of the anode milliammeter is some indication of the presence of over-modulation. A slight flicker of the anode current indicates non-linearity of the modulated amplifier, due especially to over-modulation in the downward direction. This method, in particular, should be carefully checked, as there are several other causes of anode current shift. The most common are incorrect operating conditions, i.e. insufficient grid drive or grid bias on the modulated stage, incorrect matching or gross overloading of the modulated stage. It may also be caused by incomplete neutralizing or an otherwise unstable r.f. stage.

Fig. 11. Circuit of overmodulation indicator.

As the sudden breaking up of the carrier wave by over-modulation in the downward direction is the principal cause of "splatter" or severe interference to local receivers it is particularly important to prevent this occurring. A simple means of showing the presence of negative peak over-modulation is shown in Fig. 11. The milliammeter in series with the diode will show a reading on each peak of modulation which carries the instantaneous voltage on the anode of the modulated r.f. stage "below zero", that is, negative. The diode cannot conduct so long as the negative half cycle of audio output voltage is less than the d.c. voltage applied to the r.f. stage. Both the diode and its heater transformer must be capable of withstanding, without flashover, a voltage equal to the sum of the peak r.f. and a.f. voltages. Any high voltage low current rectifier or alternatively an old transmitting triode with the grid and cathode strapped will serve for the diode. Any low or medium reading milliammeter (up to 5 mA or so) is suitable as an indicator.

Fig. 12. Overmodulation indicator modified to show when modulation exceeds 90 per cent (i.e. the voltage across R2 is 10 per cent of the supply voltage).

If an indication of when the modulation depth exceeds a predetermined level of less than 100 per cent is required, then the meter may be returned to a point on a potentiometer connected across the h.t. supply instead of to earth. For example, if a maximum of 90 per cent is to be indicated, then the voltage across the bottom section of the potentiometer should be 10 per cent of the d.c. supply voltage as shown in Fig. 12.

The best answer to the whole problem of the indication and prevention of over-modulation is undoubtedly to ensure that it is impossible for it to occur, either by the use of an efficient speech clipping system or by careful adjustment of voltage and impedance levels throughout the system.

Fig. 13. Simple receiver for monitoring telephony transmissions.

It is generally considered that any telephony transmission should be monitored at fairly frequent intervals. This can be done on headphones by using the station receiver if this is sufficiently screened and has a gain control in the first r.f. stage.

A far more satisfactory way of monitoring is to build a very simple receiver (Fig. 13). The tuned circuit is resonant at the frequency in use. The rectifier CR may be a silicon or germanium crystal or a valve. Such a piece

of apparatus can well be the most useful piece of test apparatus to have. In addition to its value as a telephony monitor, it is extremely useful for checking the hum level and source of hum on the carrier, as a simple field strength meter and as a fairly sensitive frequency meter. If the tuned circuit is resonant at a television frequency, a continuous check may be kept on the radiation of offending harmonics. If the meter is kept in a fixed place with fixed coupling to the transmitter, then the reading provides a continuous check on the overall operation of the system, any change, such as a stage going off tune or a valve slowly failing, is immediately shown.

Under normal modulation conditions the meter reading is steady; any variation indicates non-linear operation of the modulated stage and carrier shift.

## South London Pirates Fined

DURING the past year it became evident to South London amateurs that unlicensed stations were working on Top Band and 3.5 Mc/s. Preliminary investigations showed that the pirates seldom worked licensed amateurs but operated a net with their own kind and seemed to take pleasure in jamming licensed stations.

After considerable work, which involved close co-operation between R.S.G.B. members and Post Office engineers, the trap was sprung on May 6, 1956, with the result that unlicensed stations using the following call-signs were closed down within a few hours: G2CRV, G3FOT, G3HFX/A, G3IXH, G3JBV (who had previously used the call G3DM), G3CJA/M and G3GXQ.

The operators of two of these unlicensed stations appeared at Bromley, Kent, Magistrates Court on July 20, when fines of £10 and £5 5s. costs were imposed on each defendant. A third appeared at Penge Magistrates Court on July 24 when a fine of £5 with £3 3s. costs was imposed.

Unlicensed stations in South London are, in the future, likely to meet with a warm reception. Some excellent D/F equipment is now available in the area which means pirates will not escape detection for long.

## Grandson of F.D.R. visits R.S.G.B. Headquarters

WELCOME visitor to Headquarters recently was Frank Roosevelt (W8NKI), of Grosse Point, Michigan. Frank, a grandson of the late President Franklin D. Roosevelt, is doing social service work with the Winant Volunteers in England until September. He hoped to attend the September meeting of the London Members' Luncheon Club.

## TVI Queries

MEMBERS are asked to note that Louis Varney (G5RV) has been in Venezuela for more than a year and is likely to remain there for some time to come. For that reason enquiries regarding TVI should not be sent to his old address at Chelmsford.

ON THE AIR

# ON THE AIR

BY S. A. HERBERT (G3ATU)\*

DURING the past week or two, the bands have begun to take on a distinctly autumnal aspect from the point of view of conditions and all the signs and portents seem to indicate that a good time is going to be had by all DX enthusiasts. The month under review got off to a quiet start, but before long there were signs of an all-round improvement, with the three h.f. bands in particular coming into their own. Somewhat naturally, with interest centred on these bands, the improved conditions on forty and eighty metres have caused little excitement and the consensus seems to be that, at least for the time being, there is little point in doing things the hard way. Comment this month is concerned largely with fifteen and twenty metres, with the latter just leading, and so to business.

## Twenty Metres

Normal doings on the band have been enlivened by the activities of no less than four expeditions. The DL trip to Luxembourg duly took place and was greeted with acclamation, as were the efforts of F8EX, F3AT and company, who held a successful session from Andorra operating PX1EX. Even more attention was paid to SM5KV when he appeared on Spitzbergen, wielding the impressive call-sign SM8KV/LA/P. The fourth rare one—VQ1JO—also appeared according to plan, but Mal had to cope with poor conditions over the north/south path and his signals in Europe were weak. We hope he had better luck with other parts of the globe.

G3JFF (Kingswear) is active again with a new Panda Cub and now has 40 watts c.w. on all bands (except Top!). YV5AE, PX1EX and SM8KV were new ones, making the score 105C, which would have been more if he could have connected with KH6AYG, YK1DF, ZD2ROC, HE9LAA, CT3AB, VR2AO and other splendid items. Mike would like to hear from MF2AG (Duncan) and MD5FF. He was told by a DM that a certain UA is going to Albania, where he has hopes of getting on the air. DUF1 and 2 have been added to the '3JFF collection and, the necessary SMs having been worked, the WASM is in the offing. G2WQ (Prestwich) has noticed that although a variety of aeriels can produce good signals on fifteen, the strong signals on twenty come mostly from stations using beams. Latest DX from '2WQ includes UA0OE (Ulan Ude, Zone 18), PX1EX, KH6WW, '6BIF and VK, but no rare Pacific calls were heard. G3CED heard that IIBUQ would operate from San Marino on September 7, 8, 9. On phone, George worked YU3CCD, at the Third Television and Radio Exhibition in Ljubljana. The 250-watt transmitter belonged to YU3BC and the various operators all spoke excellent English.

G3IRU (Sutton) has returned to DX hunting after exams, and associated work and was pleased to get RST579 from VK3VJ (18.00), despite the presence of a ripply YU. Sundry Us have provided new countries (UH8BA got away, though) and an interesting one at

21.00 was CE0AW (RST576). Nigel remarks that forty metres still provides "good W.A.E. fodder", but has lost some of its savour now that he has 50 watts on the other bands. G3AAE (Barnet) has done the trick. Congratulations to him on working 202C with just a 67 ft Zepp—the only aerial he has ever used except for an indoor dipole when he first came on in 1946. CR4AH, SM8KV, VP5RR, ZD1DR, VP2GW and CR5SP helped to do the job; QSLs are to hand from FS7RT, HI8FR, CR4AH, ZD1DR, YK1DF and KW6CA. John remarks that if he was single and didn't have to do so much gardening and decorating, he would be able to step up the pace to a more satisfactory level! G6YQ (Liverpool) found a poor month saved by QSOs with SM8KV and YAIAM—the latter through the good offices of a W2 who fixed a sked. This got George out of bed at 03.30, but it was worthwhile. The legitimacy or otherwise of YAIAM now fades into insignificance! XE1MJ, YI2OT, FP8AP and XW8AB were also worked and a QSL has in fact been received from XW8AB via the Bureau, which clears a point raised last month in M.O.T.A. VQ1JO was heard twice, weakly, but VK9TW remained missing, even when SM and OH could be heard working him. However, the daily marathon with VK4YP continues successfully. ZB2Q told '6YQ that ZB2U and '2V are newly on and that ZB2T will close down in about two months. (Further news of ZB2 appears later.)

G3KBH (Gravesend) has been on vacation and added several new ones, to wit 9S4CH, LX1BS, CT2BO (21.30), TI2PZ, KL7BFW (19.00), CX2CO and FE8AE, but he can't raise CR6, despite calling dozens! Various Us were added to the score and other DX included VS2GR, VS6CO and VU, with VK9RM and VR1B two good ones earlier in the year. Mike's brother is now VE3DQB/W8 (Ohio), but no luck so far in contacting him. G6CJ (Stoke Poges) spent some time hunting the hot ones and managed the DL/LX expedition, heard VK9TW and the SM8, then laid in wait for VQ1JO and raised him on his first CQ.

B.R.S.20317 (Bromley) still prefers 14 Mc/s c.w., despite his converter for the h.f. bands; his latest DX includes CR7CK, EA6AW, FB8ZZ, FE8AE (14.02, 20.30), FG7XC, FL8AB (14.03, 18.30), I5RAM (14.02, 22.10), KW6CD, VP8BC, VQ3FN, XE1BC, ZD9AE (14.05, 19.20) and ZS90. That little lot helps the score to 40Z and 203C. B.R.S.20104 (S. Harrow) is one of those who appreciate GM2DBX's remarks on the help given to DX chasers by keen short-wave listeners and he suggests that frequencies and times of DX logged would add to this help. C.w. produced four new ones (something of a miracle when one is around 230C!) in SM8KV, VQ1JO, UL7CB (14.07, 13.15 and 23.15) and VK1RW (Cocos, 18.20), with CE0AD (14.05, 23.00), FU8AA (14.02, 17.30), YAIAM (via A.R.R.L.) and YAIAM (via R.S.G.B.) and KG6CE on A3 (14.15, 21.30). B.R.S.20135 (Newport, Lo.W.) is still busy feeding the multitudes—and it falls to his father capably to do most of the listening, during intervals due to gales, snapped poles, holes in roof, aeriels down and power off. No TV or radio—just a candle for light. (Yes, it

\*Roker House, St. George's Terrace, Roker, Sunderland.

has been quite a summer!) However, perseverance was rewarded with phone from ZD3D, ZL4BQ, KG1BO, 5A2TM/AM (7000 ft above the Mediterranean), W6 and VK2, 3 and 5. **B.R.S.20487** (North Finchley) had VK7CK on phone, while **B.R.S.20416** (London, S.E.12) heard ZL3QM, VO6AP, VS2DW, HB1GJ/TI (the /TI suffix denotes the Swiss Canton, not Costa Rica!), VP5AK, FM7WN, 7WS, HB1TL/HE and SM8KV, while one day all W districts were logged on phone between 07.45 and 09.10 G.M.T.

**B.R.S.20106** (Potts Wood) has heard 204C this year—a record so far and there is still time for more — this despite varied local difficulties and distractions. VK9AW or 9TW was heard signing on c.w. at 13.20 (very likely it was 9TW, who has been just audible at that time) and KX6BP (15.15), UA0KAD (16.30), VP8BC (Falklands, 22.00), EA9DF, XE1MJ (05.30), YK1DF (10.45), TI2PZ, FB8ZZ (16.15), FL8AB (15.30), HA5A/AM (!), VE6, 7 and JA (03.00) were logged, while CR10AA and FI8BB were called. Phone brought in VP5FH (Turks), VE5VL, VK7CK and ZL4BX (talking to ZM6AT—14145 at 06.15—who, he says, is on after seven each night, i.e., each morning, British time). **B.R.S.21049** (Hanwood, Salop) heard W2ZXM/MM with Capt. Kurt Carlsen at S9 one night. The receiver at 21049 is interesting, being an ex-Naval W1516B weighing a bare 1 cwt. Obviously a case for a good strong table! Your commentator worked EA0AM, who has been heard at some distinctly “un-EA0ish” times, ET3AF (Addis Ababa, 17.50 — QSL via S.S.A.) and heard VK1RW (RST347, 16.30), DU1VQ (20.00), VQ5GJ and a pile of W6s calling VR3B, while others concentrated on VK9QO.

**G3AMM** says that **3A2BF** wishes it to be known that he and **3A2BE** are the only stations in Monaco. Both work on 14 Mc/s phone only.

#### Fifteen Metres

The improvement on fifteen has been very noticeable during the past few weeks and if things go on as they have done, twenty will have to look to its DX laurels.

Already, most mornings see the band full of good signals from ZL and occasionally from other Pacific areas, while afternoons, which used to produce mostly Ws and VEs, are starting to provide long openings to VK and the Far East, with VS1, 2, 4 and 6 easily workable. Later, the skip moves to the Americas and a variety of Central and South American DX is often available well into the early hours.

**G2ACC** (Salisbury) has worked some useful phone DX with a pair of QV06-20s to a dipole (although he has plans for a two-element rotary) and a new “888”, which is doing excellently. **ZD4BR**, **VP6GT**, **6AM**, **6JK**, **VS1GV**, **VP4TO**, **0A4DR**, **ZLs** and **G5RV/PJ2** were amongst those worked. Louis has official permission to operate as **G5RV/PJ2** and hopes to return there in a month or two, when he will use fifteen and twenty metres. During his travels, he expects to use other calls. He has, of course, already been heard from **VP6RV**.

**G2WQ** finds the WNs and KNs eager to work Europe and he was pleased to be first G to many. Archie also raised **VS6AE**, **ZL1AH** and a **4X4**. **G3IRU** had **ZL1AH** reply to his CQ and talked to **W7TIR**, **VS6CT** (19.00), **KH6BCM** (09.30) and **JA8AQ** (23.00).

**B.R.S.20135** logged **VS1FE**, **VS2DB**, **VS4BO**, **ET2FM**, **4S7YL**, **CR9AH** and **YA1AA** on phone, while **B.R.S.20104** found the band good for **BV1US** (18.15; QSL to Box 63, San Francisco), **YN1PM** (Box 227, Managua) and **CR5SP** on phone. On c.w. Goff picked up **F57RT** and **XE1PJ** (14.45). **B.R.S.20487** heard **A3** from **ZD8SC**, **ZS3AB**, **OQ5BI**, **VP8BR** (21.00, Graham Land) and **KV4BQ**. **B.R.S.20106** found good DX during the early mornings when he heard **VR2BC**, **ZK1BS** (08.15), **KH6**, **VK** and **ZL** on phone and **UA1KAE** (Mirny, Antarctica, 08.00) on the key. Other c.w. was from **VK9DB**, **UD6AL**, **FB8BX**, **VP9D/P**, **UG6KAA** and **W7s** **‘UZE**, **‘AOZ**, **‘YAY** and **‘RSP**. On phone, Norman overheard **VQ4ERR** (who skeds **VK9RH**, 05.00-06.00 G.M.T.), **VP2GW**, **ET3AH**, **MP4KAC**, **VK1GU**, **YA1AA** (12.40), **VP5FH**, **DU1SV** (S9 plus at 14.50), **AP2M** (S9 on peaks at 15.40), **ZS3G**, **ZD2JHP**, **GI3CWY/M**, besides the more usual ones. He wonders

## Frequency Predictions for October, 1956

PREPARED BY J. DOUGLAS KAY (G3AAE)

BAND	NORTH AMERICA	CENTRAL AMERICA	SOUTH AMERICA	SOUTH AFRICA	NEAR EAST	MIDDLE EAST	FAR EAST	AUSTRALIA
28 Mc/s	1130—2200	1000—2030	0930—2000	0700—1900	0630—1800	0630—1600	0630—1600	0630—1400
21 Mc/s	0930—2300	0900—2200	0830—2200	0600—2030	0530—1930	0600—1800	0600—1800	0530—1630 1900—2200
14 Mc/s	0830—0030	0800—0600	ALL DAY	0600—0200	ALL DAY	0600—0000	0600—0000	0700—2200
7 Mc/s	2200—0830	2300—0800	0000—0600	2200—0200	2100—0600	2200—0200	2200	1600—2000
3.5 Mc/s	2300—0800	0000—0600	0000—0600	0200	0000	0200	2200	1700

These predictions are based on information provided by the Engineer-in-Chief of the Post Office. All times are G.M.T.

about the authenticity of PK2 and PK5s heard being called of late. **G3ATU** was intrigued to log FK8AL one lunch time, but his RST569 c.w. soon faded from the picture. ZS7C has been on phone and HH7YL was heard to ask a GM what country his prefix stood for!

#### Forty and Eighty Metres

Forty is often much better than it seems, says **G3JMO** (Middlesbrough) who worked XW8AB (22.30), despite the usual European CQs. Some of these characters obviously can't cope with anything below an S9 signal. Put them amongst a band full of VK and ZL and they wouldn't hear a thing. **B.R.S.20317** heard the XW8 as well as UM8KAA, UA9 and W0SGG (Colorado, 23.00). **B.R.S.20106** logged SM8KV/LA/P, ZB1HKO, 9S4AX, W5WDD, W0FM, W0BLZ and heard a DM call FG7XC (21.15). Eighty calls for little comment, though **B.R.S.20317** heard WWV at R5 S5-6 at the very early hour of 19.20 G.M.T. on August 10, so things should be happening on that band before long. **B.R.S.20106** mentions W1AW, WITYQ, KN2PVE, VE1GF and UR2AR.

#### Ten Metres

Ten began to show signs of opening about the middle of August, with African and Middle East DX coming through. Then on August 18, W1, 2, 4, 5 and sundry South Americans started to appear and for four days at least, the band sounded distinctly healthy. When you read these words, DX should once again be in full swing. **B.R.S.20135** heard VQ3ES, VK5DB, OQ5 and ZS1, **B.R.S.20487** logged VP6GT, ZS1, '4, '6 and **G3ATU** managed FB8BZ (16.30) on A3.

#### Top Band G-ZL Tests, 1956

Dud Charman (**G6CJ**) sends full details of another series of tests which will appeal strongly to keen chasers of Top Band DX, but let nobody imagine the task to be easy: far from it. **G6CJ** and ZLIAH have run successful tests in the past and now arrange one open to all. The "season" lasts only for about 10 days and tests will run from October 1 to 19 or perhaps later, Monday to Friday, between 06.15 and 06.45 G.M.T. ZL stations will be between 1875 and 1900 kc/s and will call from 06.20-25, 06.30-35 and 06.40-45. G stations will transmit between 1800 and 1825 kc/s (very necessary, because of Loran in ZL) and will call from 06.15-20, 06.25-30 and 06.35-40. Likely stations are ZLs 'IAH, '3GQ, '3JA and '3RB. Dud emphasises that the job is so difficult that only first class gear and rigid discipline can succeed—so please behave. Keep good time and break it only if a QSO is likely. Anybody heard calling 'em above 1875 kc/s will receive an atom bomb!

#### Overseas News Items

**ZB2I**, who is QSL Manager for Gibraltar, sends details of current activity there, correcting the details given in July *M.O.T.A.* ZB2A is the R.A.F. Club station, at present inactive; ZB2J is re-issued but not yet active; ZB2I is on all bands (except Top Band), phone and c.w.; ZB2P uses 14 and 21 Mc/s phone and c.w.; ZB2Q, 'R, 'T (all R.A.F.) are on c.w.; ZB2S is now QRT but ZB2U is active c.w. and phone. ZB2I himself is with Cable and Wireless and not R.A.F. as was stated earlier.

**G3ILL** (London, N.W.2) hears from **W3TYW** that the proposed expedition he was to make with **W2EIK** (July *M.O.T.A.*) it now off, as separate country status has not been granted by A.R.R.L.

**W6ITH** (FS7RT, PJ2MC) alerts us to future rare spot activity. Reg was seeking permission to operate from several other places while waiting for his FS7 and PJ2

tickets to arrive and, believe it or not, he has permission to operate from no less than three additional rare DX countries. Call-signs have been issued to him and accommodation is lined up. One spot has never had amateur activity, while the other two have seen none for many years. "All I need now", says Reg, "is to be triplets"! He hears from YV5BZ, who is handling the YV0AA QSLs, that cards and banners are going direct for those received. If anyone is in doubt as to a QSO with Aves, write YV5BZ, who will be pleased to check the log. Transport to Aves was a problem and '5BZ thinks La Blanquilla Is.—80 miles from Venezuela—is a better bet for future YV0 work.

More useful information from **W6YY** (La Canada) is that VK1RW is now active from Cocos, v.f.o. A1 with a chirpy signal. QSL to Direction Is., Cocos-Keeling Group, via Perth, Australia, FB8BI (Jan de Nova Is.) does not count as a new country. VR3B (Fanning Is.) on c.w., VR6AC (14143, phone) and BV1US on A1 and A3 are all making lots of QSOs. VK9TW left Nauru on August 19, headed for VR4. VQ8CB is in Mauritius, awaiting a visa to settle in ZL. XW8AC on 14130 kc/s closes around 13.00 local time when the Laos power is cut. ZD9AE (Gough Is.) is on 14050 kc/s Saturdays around 15.00. W6AM received a card from CR8SA for an early 1956 QSO. East coast Ws have been working AC3SQ on phone.

**G2HJT** (Ashton-under-Lyne) passes news of Richie Silverman (**W5CFG**) who, at the age of fifteen, has already held a licence for four years! Using 25 watts and three element beams on 14, and 21 Mc/s, he has worked 190 countries and holds various operating certificates. Richie has hopes of making a trip to Swan Is. in company with W6NJU, who is his own age. Navassa Is. also looms as an alternative, so maybe we shall hear W5CFG/KS4 or W6NJU/KC4 causing a stir on the bands. Anyway, good luck to both the youngsters.

And there we are until next month. Good luck and hunting again and please post your findings to arrive circa September 21. 73 and tnx.

#### Tahiti-Nui Expedition

**RESEAU** des Emetteurs Français, the French national society, has informed Headquarters that Roland d'Assignies will be operating FO8AD/MM on a French marine expedition which is leaving Tahiti about October 15 and is expected to reach Santiago, Chile, about the end of January, 1957. The object is to prove that it is possible to navigate from Tahiti to South America and back again on a Polynesian bamboo raft 50ft long, 16ft wide equipped with two triangular sails. The leader of the expedition is Eric de Bisschop, well-known for his oceanographic research. Four other Frenchmen complete the crew.

FO8AD/MM will operate on 7, 14, 21 and 28 Mc/s but it is expected that most contacts with amateurs in Europe will be on 14 and 21 Mc/s c.w. around 08.00 and 17.30 G.M.T. Contacts will be restricted to an exchange of RST reports and the names of the operators. The raft's position will be transmitted on the hour and on the half-hour.

So that those interested in the expedition may plot its progress, R.E.F. is producing a three-colour map 8½ in. by 12 in. which can be obtained from R.E.F., B.P. 42-01, Paris R.P., by sending 480 French francs or 16 international reply coupons. When the expedition is over, these maps may be sent to an address to be published later so that the dated positions can be verified and sent back to the owner without charge after being signed by members of the Expedition.

# Amateur Television

By M. BARLOW (G3CVO/T)\*

THE last report appeared just after the printing dispute, and so was rather condensed. A reminder, then, that this year so far British Amateur TV enthusiasts have transmitted colour pictures over a 13 mile path, had the first live-camera to live-camera QSO (duplex has not been successful yet) and raised the TV DX record to 38 miles (G2DUS/T-G3KKD/T). Abroad, we hear of the first successful pictures produced in Dublin, and the Gröningen (Netherlands) group are experimenting with colour; a large Italian group has been formed, and first results are expected there soon.

Activities now are concentrated on preparing exhibits for the Third Amateur Television Convention, to be held at the Bonnington Hotel, Southampton Row, London, on October 27.

## Station Reports

G2DUS/T (Baldock) has now added a first-class slide scanner to his station, and finds that blue-trace oscilloscope tubes give far better results than the ubiquitous 5FP7 which suffers from grain. Unfortunately, many of these tubes burn easily and flash over if the rated e.h.t. is increased. The scanner, 16mm telecine, staticon camera, monoscope, sync generator, transmitter, aerial and converters will all be at the Convention, besides an exhibit of what can be made from the APN4 indicator unit. G2DUS runs a regular sked with G3KKD/T (Ely) on Sundays at 11.00, and also with G2WJ/T in the evening.

G3KKD/T has little spare time, but is increasing the power output of the vision transmitter to 50 watts. So far it has not been possible to exchange pictures with G2WJ or any others of the East Anglian TV Net apart from G2DUS. G3KOK/T (Bishop's Stortford) has exchanged pictures with G2WJ/T (Dunmow) but is in a bad site for other stations. The image orthicon camera chain is nearly complete, and will be running at the Convention. G3CVO/T has built a portable 70cm TV transmitter for the Convention, and also a QRP 3.5 Mc/s transmitter so that the Chelmsford group's Sunday morning TV net can be run on 1980, 3650 and 144 Mc/s simultaneously for publicity! A snag in the big TV transmitter has been traced to a faulty meter used to set the stabilizer currents. A new 32 element bidirectional array is available for relay and duplex work. Efforts are now in hand to send pictures to G3VI (Brain-tree) and G2BCB (Colchester). A 13cm link has also been started.

In Birmingham, G3DFL is moving to higher ground, as is G3BA, so another /T or two is a possibility. Colour expert C. G. Dixon (Ross-on-Wye) is also moving to a better site, and with possible help from G2DUS/P/T colour pictures may be sent to Birmingham in due course. The Birmingham camera is well on the way, and G5KS has also offered his camera. G. Wynn, with the R.C.A.F. in Metz, France, has a complete staticon camera chain in action, and is anxious to contact French amateurs interested in TV. The possibility of a first cross-channel TV contact was discussed at the London V.H.F./U.H.F. Convention.

G2WJ/T continues his regular Saturday sked with G3GDR/T (Watford) at 18.00, and has also received test signals from G3CTS/T (Norwood) which is shortly to begin regular working. G3LCM/T (Coulsdon) and

G3KFE/T (Enfield), the latter having emigrated from Birmingham, are new stations in the London area. To encourage and instruct, Amateur TV groups are starting this autumn in both North London (c/o G3ICU) and South London (G3EKE). G3AST (Luton) now has a lattice mast erected, and will soon be on the air. PA0SW (The Hague) transmits TV regularly every Sunday 11.00 to 12.00 on 145.5 Mc/s, with the sound on 144.1 Mc/s. Horizontal polarization is used with a peak sync power (negative modulation) of 60 watts; 312 line 50 pictures per second standards are used. G3KFH/T (Worthing) has been radiating experimental transmissions (towards France?), but is temporarily off the air to get married.

The writer will gladly put any interested reader in touch with his nearest fellow enthusiast; there are in existence active groups in Southampton, Worthing, South and North London, Romford, Chelmsford, High Wycombe, Birmingham and Manchester. Anyone interested is cordially invited to come to the Convention mentioned above. Club secretaries may like to bear in mind that B.A.T.C. lecture tapes are available.

## Long-distance B.B.C. Television Reception

AS forecast last month, there has been a considerable upwards trend in the values of M.U.F. for October, and consequently the B.B.C. Band 1 Television transmissions may be receivable in more overseas locations and for increased periods of time.

It will be greatly appreciated if those overseas members who do successfully receive these transmissions will forward details to Headquarters. Such details should preferably include a brief description of the receiver and aerial(s), the quality of reception and the time in G.M.T.

—G3AAE

## DX Television Predictions for October, 1956

Buenos Aires.	1500-1800.	Karachi	1000-1300.

## International Ferrite Convention

DELEGATES from France, Germany, Holland, Sweden, U.S.A., and, it is hoped, from Russia, as well as Great Britain, are expected to attend the International Ferrite Convention organized by the Institution of Electrical Engineers from October 29 to November 2, 1956. Full details can be obtained from the Institution at Savoy Place, London, W.C.2.

## Ferrites

A COURSE of about eight lectures on "The Microwave behaviour of Ferrites" will be given on Tuesday evenings from 6.30 p.m. to 8.30 p.m. beginning on October 16, 1956, at Sir John Cass College, Jewry Street, Aldgate, London, E.C.3. The lecturer is a member of the staff of the G.E.C. Research Laboratories at Stanmore, Middlesex.

Application for enrolment form should be made to the College prior to the opening date of the course. The fee for those residing in the Administrative County of London is £1.

\*10 Baddow Place Avenue, Great Baddow, Essex.

# TWO METRES AND DOWN

By F. G. LAMBETH (G2AIW)\*

V H.F. and u.h.f. aerials are often mentioned by correspondents and it is certainly true that most of us, however efficient we believe our own equipment to be, are always "in the market" for information regarding that used by other stations whose achievements are above average. Many v.h.f. operators are, however, not very eager to pass on information, though this is by no means true of all. There is a great scope for experimentation in v.h.f. aerials, and many potential users of the 2m and 70cm bands would greatly appreciate some reliable information on the properties of aerials in use. With the never ending controversy as to the respective merits or demerits of Yagis, slot beams, stacked or otherwise, plain stacks, turnstiles, etc., there is a wide field.

It is known that a great deal of amateur aerial research is going on; anyone who is interested enough to send in details may be assured that they will be published in this feature.

## Two Metre News

In general, conditions during the month were patchy, although there were some short periods of good conditions for a day or so. At other times the bad weather brought very poor propagation, nevertheless QSOs were usually possible.

During the 2m Field Day on August 19 the weather was generally poor although some parts were luckier with conditions below par. Nevertheless the portables seemed to be doing business at up to 100 miles distance.

**B.R.S.6327** (Earlsfield) found conditions "not too good" with one or two better evenings and weekends. The Yagi now in use is a five element array on a  $\frac{1}{4}$  in. brass boom which, at 32ft, stood up to unseasonable high winds. The first station heard on it was G3IRS (Locking, Somerset), over 120 miles away. **B.R.S.16075** (Shirley, Southampton) went out with G3ION/P to a site near Shaftesbury (Dorset) and had a fair day with only the odd shower or two. Portable activity appears to have been lower than usual. Propagation appeared to be poor except towards France and the Channel Islands. Signals to the north were at times good, but subject to heavy fading. The crew at G3ION/P included G8QW and three short-wave listeners. F8MX/A was heard recently at well over S9 using an indoor wire.

**B.R.S.19162** (Dewsbury) says conditions were very patchy, the best nights being August 7 and 9. On the 7th G2ADZ (Woolacombe) was logged for the first time and on the 9th G3CGQ (Luton) was a very good signal for a couple of hours. G5KG, who is usually S5, was logged at 15 to 20 db over S9. B.R.S.19162 has built a version of the G2FKZ "Wonder Box" using an EC91. In front of a commercial converter it was a big improvement, but not so effective with the R.S.G.B. converter although receiver gain had to be reduced. Apropos the remarks we made here last month, '19162 says newcomers are frightened off the band because of the "mad chase" after db's and noise factors by those already

operating. '19162 and many others started on the h.f. bands by using 0-V-0 and the family broadcast aerial and "progressed from there". He suggests that this is the way to get people on to 2m. Something similar to the "Simplest Converter" recently described in *QST* is required and the simplest aerial could be a vertical half-wave! '19162 would like to see an article describing a cascode receiver. Field Day conditions were not good, G8UQ/P and G3ILI/P being the best signals heard.

**B.R.S.20133** (Melton Mowbray) says that G3ALC is now active again from Oakham, Rutland. It is a long time since there has been a fixed 2m station in the smallest county.

**G6XM** (late of York) is going to a fixed QTH at Tollereton (Notts.) and it is expected he will lose no time in getting going again. **G3HRH** (Welwyn Garden City) who won a prize at the London V.H.F./U.H.F. Convention has been on 2m for about 6 months and is using 65 watts to a QV06/40 into a home designed 5-over-5 on a 30 ft tower. The receiver comprises an R.S.G.B. converter with a 6BQ7A and crystal oscillator feeding into a "hotted up" BC348. '3HRH is always looking for QSOs on 2m.

**G3EMU** (Canterbury) says conditions have been in keeping with the weather—"pretty bad". He has worked G5KG, F3LO, F9EA/P, four ONs and PA0NO, and says it would be nice to work some Gs for once! **G3KHA** (Knowle, Bristol) had one or two good openings to the South-east, worked GC3EBK at S9 one night and F8MX/A at the same strength on August 9. Conditions were otherwise difficult to assess due to low activity. They do not generally appear as good towards the north as they were last year, but this may be due to the 5-over-5 which, being low angle, is inferior to the flat top when used in a screened direction.

**G8LN** (Plumstead) also says "sometimes conditions were good" but that the band was almost deserted. The best aerials (says '8LN) seem, on correlating results, to be stacked Yagis driven by slots, as stations so set up seem to be most consistent on the DX paths. A number of stations have been complaining about corrosion effects on aerials. '8LN says this can be completely overcome by using modern anti-corrosion techniques. G8LN would greatly appreciate reports of his signals over 50 miles distance. **G5MR** (Hythe, Kent) reports that during a phone QSO with F9EA/P on July 26 signals were at great strength, '9EA found he could receive '5MR with the feeder completely removed from his converter! A similar test was tried at '5MR, and the feeder was removed several feet and both sides connected straight to earth. Although the r.f. and mixer circuits are enclosed in a four sided chassis, F9EA/P's phone could still be read very satisfactorily at 78 miles! French stations worked for firsts included F9IW (Bayeux) and F9KZ/P (operating from Calvados). The weather for the "Rallye des points hauts" during the weekend of August 18-19 was very windy and '5MR had to lower his beam on the first day. An improvement on the Sunday allowed it to be raised again, but conditions

\*21 Bridge Way, Whitton, Twickenham, Middlesex.

were poor and only five French stations were worked and three heard. F8MX (St. Valéry-en-Caux) was busy working G stations during the R.S.G.B. Field Day and was receiving them better than 5MR, who says this is quite usual; he can sometimes work Paris stations which are inaudible to French coastal stations.

**G8PX** (Oxford) has raised the beam 5 ft and has consequently been working more stations and hearing more DX. The best contacts on 2m were F8MX, GW6NB/P (Radnor), and G5BD. **G3ILI** (Forest Hill), who has been testing s.s.b. on 2m, very much appreciates the help he has received from other operators. **G8VN** (Rugby) is moving to Leicester and will, it is hoped, operate again from there. The gear still works, as does the famous indoor aerial, but an outdoor one is envisaged when the station gets to Leicester.

**B.R.S.18572** (Mitham) found plenty of activity during Field Day (August 19) but conditions not very good.

**G3GJ** (Plympton) who is looking for a daily sked with any short-wave listener or transmitting amateur, has had a quietish month. A highlight was his reception of F9EA/P at 559 on July 26. **G3CVO** (Great Baddow, Chelmsford) has been experimenting with 2m and 70cm driver stages, and offers the following "law":—"It matters not how thou goest about getting the drive, thou wilt not do better than 30mA at 250V for 2mA in 33,000 ohms at the p.a. grid". Given: any number of currently available valves. Best combination so far is 6J6 Squier oscillator to 72 Mc/s and EF91 doubler followed by a 5763 on 144 Mc/s (series tuned or pi-coupled). A QV03/10 tripler is being used in a new portable rig for 70cm. **G3CVO** would like some information on methods of raising aerials when needed only, and how to clamp them then to rotating masts.

**B.R.S.21034** (Lymington) has been working on the "converter of doubtful design" which is now much more conventional. An ECC84 direct coupled cascade r.f. stage is inductively coupled to a triode-connected 6AK5, with an i.f. of 10.7 Mc/s. The arrangement is working very well. During the second week of the *Short Wave Magazine* contest nothing very much was heard, although G5YV was logged as best DX. Midland stations at good strength were G2ATK, 3KFS 3JWQ and 6SN. July 26 was the best evening with a path which appeared to cover the whole of the West, Wales and Southern England and extending to France. F9IW and 9EA/P were both heard (S9) which is exceptional as France is screened by the Isle of Wight hills. G3FAN (Ryde) was heard working G13CWY just before midnight.

**G5MA** (Great Bookham, Surrey) has had a contact with G13CWY (Whitehead, Co. Antrim) and three more with G13GXP (Kilkeel). GW6NB/P was worked in Radnor and Cardigan during his brief expedition. Other Welsh QSOs were with GW3BOC/P (Colwyn Bay) and 3FXR (Port Talbot). The best inter-G contacts were G3BW and 3AGA. Fifty counties have now been worked from the new QTH. **G5BM** (Highnam, Glos.) worked mobile during his holiday and found conditions extremely poor for most of the time and in general only locals were worked. The only DX station heard was F8MX on August 10 from Richmond Park, Surrey. Activity in Essex was extremely low—unlike the West Midlands where there always seems to be someone on!

**G2CZS** (Chelmsford) says the best spell of conditions was July 21-25 which included the "second leg" of the S.W.M. Contest. During this period the best QSOs were with G4BP/P (Scarborough) and G3IUD/P (Mow Cop, Cheshire) for a new county. On August 7 G2BMZ (Torquay) was raised. Very little was achieved during the 144 Mc/s Field Day on August 19 although a QSO was had with F8MX/A.

**G6XX** (Howden, Yorks), still active although on a reduced scale, raised GC3EBK out of a "dead band" on July 26. G5BM and 2CZS were worked on the 24th, with G2DDD and 3FIH heard on the 25th. On August 9 G6OX was worked and F8MX/P heard on phone.

#### News from Scotland

**GM6WL** (Glasgow) says there is still quite a bit of activity in spite of holidays. **GM3FGJ/P** went to a site near Bathgate (West Lothian) and gave a number of stations a new county. Owing to receiver trouble, some calls were missed. Conditions were slightly better on July 26 and G2NY (Preston) was a fine phone signal in Scotland. QSOs with GM3IBV, 6WL, 6XW and others were also made. On the same night G3IUD was heard at 449, and GM6XW worked G13GXP (569 in Glasgow). On July 27 G2NY and GM3IBV were again in contact, but conditions were worsening. On August 9 GM6SR (Edinburgh) worked a great number of Glasgow stations, some of them for the first time.

#### News from the Channel Islands

A very welcome letter has been received from **GC3EBK** who has been a consistent station for a long time, and has really put the Channel Islands on the radio map. His best period recently was July 26 when G5YV, 3DVK and 3KUH (all in Yorkshire) were worked. ON4BZ was heard on July 8 at 589, but regrettably no QSO resulted. The EI2W—F8MX QSO was monitored with interest, although EI2W was not heard; F8MX and G6NB were.

#### First EI—F Contact on Two Metres

**EI2W** (Dublin) made his first appearance for several weeks on 144 Mc/s on the night of August 9 and was astonished to find an almost empty band, with F8MX coming in at S9, obviously unaware that he was being heard in Dublin—further proof that the advice of the old timers should be heeded—"look well over the band!"

**EI2W** came on the band at 21.00 G.M.T. and put out a CQ call. This was answered by G3KFD, and was followed later by a QSO with G3BPJ. At 2209 EI2W was surprised on tuning over the centre of the band to hear a Continental voice saying in good English, "I am now going over to 70cm," and signing F8MX. The voice was that of F9CQ operating his brother's rig from St. Valéry-en-Caux. EI2W had no way of getting in touch with F8MX, so decided to look for some station that could relay a message to F8MX. Luckily G6NB was heard at good strength and was worked at R5S9 both ways. He said he would call F8MX immediately on 70 cm; EI2W's luck held out, for G6NB came back to say that he had located the French station and that the latter would listen immediately. EI2W heard the French station at once, but F8MX took a little time to locate the Dublin station. G6NB stood by all the time and was able to tell the French station that he was being received in Dublin at S8. F8MX then located EI2W and two-way contact was made at 2323 G.M.T.

EI2W wishes to thank G6NB for his patience and help, without which, this QSO could never have been possible. It is hoped that Continental stations will look well over the band before throwing in the sponge—British stations also please note!

#### Seventy Centimetres

The only report this month is from G2XV (Cambridge) who has had contacts with G3HBW, 3IOO and 3SUM. F8MX (St. Valéry-en-Caux) heard G2AIW's 2m harmonic on August 9!

## Twenty-three Centimetres

The first R.S.G.B. 1250 Mc/s tests took place on September 2. Initial reports show that results in the London area were excellent, with contacts between home stations of up to about 25 miles. The results are described as far more encouraging than those of the first 420 Mc/s tests which did so much to stimulate interest in that band. Those known to have been active include G3GDR, G3HBW, G3GCD, G5DT and G6NF. Reports from other parts of the country are awaited with interest.

A welcome letter from G3BVU (/A at Luton) mentions recent accomplishments in collaboration with G3CGQ and 3FUL also of Luton. During N.F.D. the transmitter was set up on Galley Hill, Luton, and G3FUL motored to Stewley 16 miles away where strong signals were received. The transmitter has since been set up in G3BVU's car, and on July 27 with 3CGQ and 3FUL on Galley Hill with the receiver 3BVU went to Stewley with the transmitter and worked cross-band (via 160). There were heavy thunderstorms and a very humid atmosphere. The 23cm report was only 339. On August 11 3BVU visited Galley Hill and 3CGQ and 3FUL went to Brill, Bucks, 29 miles away. Immediate contact was established and lasted an hour. Signal strength at Brill was 599!!! Before bad weather sets in they are trying to increase the range. They hoped to be out again on September 2.

The present gear was built by G3FUL but it is hoped to have another "pot" oscillator with a 703A built by G3CGQ in operation soon. Congratulations are offered to all concerned, and further news is awaited with interest. G3BVU promises to answer any questions—thanks in advance OM.

**GM6WL** (Glasgow) reports that another test was carried out on August 26 between GM6ZV and 6WL on phone at a distance of seven miles. The 446 lighthouse tripler was duplicated and tried out at 6ZV.

For various reasons the gear could not be erected in the "good" window (facing 6WL) but had to be used in the shack itself, at the other end of the house, thus firing through two internal partitions besides the outside brick wall. Under these conditions they were pleased to receive an R5 signal, although strength was only about S5-6. Two-way attempts are expected soon with both transmitters and receivers in the most favourable positions.

## Television DX

**ZD4BM** (G2ATU) has been hearing the B.B.C. London TV sound in the Gold Coast on a CR150. Predictions for long range reception of Band I television stations appear elsewhere in this issue. Reports will be most welcome.

\* \* \*

This is all for now; reports for next month not later than September 21 please.

## Worked and Heard on Two

**B.R.S.6327** (Earlsfield) June 20–July 20.

Heard: G2BRX, 2DDH/P, 2DVD, 2HGR, 2NY, 3AUS, 3BEX/P, 3BFP/A, 3DGR, 3DLU, 3FAN, 5AU, 5RV, 5YV, 8IL, GW8UH.

**B.R.S. 6327** (Earlsfield) July 20–August 19.

Heard: G2ADZ, 2AHY, 2HCG, 3AGA, 3AUS, 3BA, 3BEX/P, 3CGQ, 3DLU, 3FAN, 3FIB/P, 3GHO, 3IRA, 3IRS, 3KFT/P (5 miles s. Cheltenham), 3KHA, 5YV, 8IL, 8PX, GW3BOC/P, GW8UH.

**B.R.S.16075** (Shirley, Southampton) June 20–July 19.

Heard: G2ADZ, 2BMZ, 2DDD, 2DSP, 2DVD, 2HIF/P (Stony Cross), 3AUS, 3AYL/P, 3DLU, 3FIH, 3GHO, 3GVF/P/M, 3HBW, 3HHY, 3HSD, 3IOO, 3IRS, 3JG, 3JZT, 3KHA, 3KPT, 2XV, 3XC/P (Bucks), 4GR, 5BM, 5DW, 5MA, 5YV, 6NB, 6OX, 8DA, 8UQ/P, 8VZ, GC3EBK, GW2ACW, 3FKO/P (Montgomery), 3GMN/P (Montgomery), 3GWA/P (Denbigh), GW3KEQ/P (Radnor), 8SU, 8UH.

**B.R.S.16075** (Shirley, Southampton) July 22–August 18.

Heard: G2ADZ, 2ANS, 2DSP, 2HCG, 2HDZ, 2XV, 2BMZ, 3AGA, 3FIH, 3EMO, 3GHO, 3HHY, 3HRH, 3IEI, 3IRA, 3IRS, 3HBW, 3HA, 3KPT, 3KSR/P, 3MU, 3YZ/P, 3YH, 3XC, 5MA, 6FO, 6OU, 6NB, 8DA, GC2FZC, G3CWW, GW8SU, GW8UH, F8MX/A.

**B.R.S.18572** (Mitcham) July 7–July 8.

Heard: F9EA/P, G2AK, 2YB, 2ATK, 2BMZ, 2CIW, 2CZS, 2DDD, 2DSP, 2FMJ, 2HCP/P, 2HIF/P, 2NY, 3ARX, 3AUS, 3BA/P, 3DLU, 3DMU, 3DOP, 3ENY, 3FAN, 3FIH, 3GJZ, 3IRA/P, 3KHA, 4JJ/P, 5AU, 5BM, 5CP, 5DW, 5US, 5YV, 8IL, GW3GMN/P, 3GWA/P, 3KEQ/P.

**B.R.S.18572** (Mitcham) August.

Heard: F8MX, G2DDD, 2DSW, 2XV, 2HCP/P, 3BEX/P, 3ERD/P, 3FIH, 3ION/P, 3KHA, 5BM/P, 5PP/P, 5YV.

**B.R.S.19162** (Dewsbury) June 20–July 20.

Heard: G2AIW, 2CZS, 2DDD, 2RD, 2YB, 3FAN, 3FIH, 3HTY, 3HX5, 3IER, 3NT, 3XC/P, 4GR, 5BM, 5DS, 5DW, 8AL, 8IL, 8UG/P, GM3BDA/P, GW3BOC/P, 3GWA/P.

**B.R.S.19162** (Dewsbury) August 6–19.

Heard: G2ADZ, 2CIW, 2XV, 3CGQ, 3FGT, 3GHO, 3ILI/P, 5KG, 5MA, 6OX, 8UQ/P.

**B.R.S.20133** (Melton Mowbray) June 13–July 10.

Heard: G2BVV, 2FNV, 2HCG, 3FDF, 3JWQ, 3DLU, 3GSO, 3JXN/A, 4JJ/A, 5MA, 5ML, 5YV, 8CZ, 85B/M (Rugby).

**B.R.S.20133** (Melton Mowbray) up to August 15.

Heard: G2FNV, 2HCG, 3ALC, 3ERD/P, 3JWQ/P, 4JJ/P, 5YV, 5PP/P, 8CZ, 8QY/P, 85B/P.

**B.R.S.21034** (Lymington) July 7–July 15.

Heard: G2MV, 2RD/P, 2AHP, 2AHY, 2BMZ, 2BWW, 2CIW, 2CZS, 2DSP, 2DVD, 2HCG, 2HDZ, 2HIF/P, 3BA/P, 3XC/P, 3ECA, 3FAN, 3FIH, 3FJR, 3FQS, 3FZL, 3GGR/P, 3GHO, 3GKZ, 3GOP/P, 3GVF/P, 3HVO/P, 3ION, 3JF, 3JWQ, 3JZG, 5AU, 5KW, 5MA, 5ML, 5NF, 5OB, 5YV, 6AG/M, 6NB, 8AL, 8IL, 8LN, 8UQ/P, GC3EBK.

**B.R.S.21034** (Lymington) July 22–August 14.

Heard: F8MX, 2EA/P, 9IW, 9KZ, G2XV, 2YB, 2ADZ, 2AHP, 2AIW, 2ANS, 2ATK, 2BMZ, 2CZS, 2DDD, 2DVD, 3AUS, 3CGQ, 3ERD/P, 3FCQ, 3FIB/P, 3FIH, 3FMO, 3FQS, 3FWW, 3GHO, 3GOZ, 3GTH, 3HBW, 3HHY, 3HRH, 3IAM/P, 3IIT, 3ILI/P, 3IRS, 3IUL, 3JON, 3JWQ, 3KEQ, 3KFS, 3KHA, 5BM, 5DW, 5KW, 5MA, 5ML, 5NF, 5PP/P, 5YV, 6AG, 6JK, 6NB, 6ON, 6OX, 8AL, 8PX, GC2CZS, 2FZC, 3EBK, GW3ACW, 5BI, 8UH.

**G2CZS** (Chelmsford) June 23–July 16.

Worked: G2BMZ, 2HIF/P, 3BEX/P, 3FAN, 3FFV, 3FIH, 3GPT, 3GSO, 3ION, 3JWQ, 3KHA, 4GR, 5BM, 5YV, 8PX, GW3KEQ/P (Radnor). Heard: F8GH, 9EA/P, G2ADZ, 3AUS, 3HHY, 3KFD, 4JJ/A, GC3EBK.

**G2CZS** (Chelmsford) July 21–August 19.

Worked: 3GALC, 3ERD/P, 3HTY, 4JJ/A, 5PP/P, GC3EBK. Heard: F8MX/A, G2BMZ, 3KFN, 3JYB, 3KFT/P, 3KHA, 3KPT, 4BP/P, 4GR, 5BD, 5LL, 5YV, 6XX.

**G3EMU** (Canterbury) June 21–July 20.

Worked: F8GH, G2JF, 3FAN, 3GJZ, 3INU, 5KW, 5MR, 8VR/P, QN4BZ, PA0BL. Heard: DJ1DC, G2AIW, 2DDD, 3HDZ, 5KG, 5YV, 6OX.

**G3IGJ** (Plymouth) June 22–July 20.

Worked: G2ADZ, 3AUS, 3GAO, 3GRA, 3HPC, 3KDK, GC2FZC, GW8UH. Heard: G2BMZ, 3KFN, 3JYB.

**G3IGJ** (Plymouth) July 21–August 20.

Heard: F9EA/P, G3FIH, 8IL. Worked: G2ADZ, 3GRA, 3KDK, 3KFH, 3MA/P (nr. Plymouth), 3XC/M (Plymouth), GC2FZC.

**G3KHA** (Bristol) July 20–August 19.

Heard: G2CVD/P, GW3GWA/P, GW6NB/P (Merioneth). Worked: F8MX/P, F9EA/P, G2UI, 2ADZ, 2AHL, 2AHY, 2AUD, 2CIW, 2CZS, 2DSP, 2DVD, 3JR, 3MA/P (W. Glos), 3WS, 3CGQ, 3FAN, 3FZL, 3GHO, 3GOZ, 3HRH, 3ION/P (Dorset), 3INU, 3JMS, 3JON/A, 3KEQ, 3KEQ/P (nr. Guildford), 3KSR/P, 5DS, 5KW, 6AG, 6FO, 6NB/P (Radnor), 6OX, 8AL, 8IL, 8UQ/P, 8VZ, GC3EBK, GW2ACW, 3FXR, 8SU, 8UH, 8UH/P (Brecknock).

**G5MR** (Hythe) June 24–July 15.

Worked: F3CA, 3JN, 3SK, 8GH, 8LO, 9EA/P, 9FB, G2CIW, 2DDD, 2DSP, 2HDZ, 2IF, 2RD, 2UJ, 3BEX/P, 3BFP/A, 3CGQ, 3EMU, 3FCQ, 3FIH, 3FZL, 3IUD/P, 3JMS, 4GR, 4JJ/A, 5DS, 5KW, 5YV, 6FO, 6YB, 8BJ/P, 8IL, 8LN, 8PX, 8RK, 8VN, 8VR/P, GC3EBK, ON4BZ. Heard: F8OB, G2AHP, 2AIW, 2BMZ, 2CZS, 2HIF/P, 2WJ, 2XV, 2YB, 3AUS, 3DLU, 3FAN, 3FD, 3GHO, 3GJZ, 3HRH, 3IOO, 3IRA, 3JWQ, 3JZG, 3KHA, 3XC, 5BM, 6AG, 6NB, 6XH.

## Region I V.H.F. Contest

Members who participated in the I.A.R.U. Region I European V.H.F. Contest organized by the German National Society, D.A.R.C. (held during the weekend September 8-9, 1956), are reminded that entries from the United Kingdom must be addressed to the R.S.G.B. V.H.F. Manager (Mr. F. G. Lambeth, G2AIW, 21 Bridge Way, Whitton, Twickenham, Middlesex).

United Kingdom entries received through any other source are liable to be disqualified.

## R.S.G.B. at the National Radio Show

THE Society was again represented at the National Radio Exhibition, held last month at Earls Court, and the stand, under the management of Fred Ruth (G2BRH) of Ilford, became a focal point for radio amateurs from all parts of the world and for would-be amateurs seeking technical advice on their problems and information concerning Society activities.

One section of the stand staged a typical amateur station, the gear being supplied by Eric Yeomanson (G3IIR) who also produced tape recordings of actual contacts with that station to which visitors could listen through earphones.

Among the display of pieces of transmitting, receiving and test apparatus made by members, the simple receiver designed by C. H. L. Edwards (G8TL) excited consider-

able interest. A duplicate model, built on the stand by Peter Smith, aged 15 (a school-boy member of the Society), enabled those new to constructional work to see the actual process of turning a batch of components into a finished receiver with the aid of a minimum of tools. Recordings of reception obtained with the prototype receiver on its several ranges were available on tape.

A brisk trade was done in the various Society and American publications. To those members who gave up their time to this aspect of the stand's activities, as well as to those who provided the answers to the wide variety of technical questions posed by visitors and to those who by their help behind the scenes made the whole project possible, go the thanks of the whole Society.—W.H.A.

A general view of the R.S.G.B. stand at the National Radio Show, Earls Court. Schoolboy Peter Smith is in the centre with Council Member C. H. L. Edwards, G8TL. F. Ruth, G2BRH, who was manager of the stand, is at extreme left.

### London Members' Luncheon Club

MORE than 20 members and friends, including F9SO and VS2BD, attended the August meeting. In the absence of Stanley Vanstone (G2AYC), the chair was taken by Arthur Milne (G2MI).

The club will next meet on September 21 at 12.30 p.m. for 1 p.m. at the Bedford Corner Hotel, Bayley Street, Tottenham Court Road, London, W.C.1. Those intending to be present are asked to telephone Frank Fletcher (RU1slip 2763) or R.S.G.B. Headquarters (HOLborn 7373) at least 24 hours in advance.

### Radio Amateurs' Examination

THE Radio Amateurs' Examination Course run by Glasgow Corporation Further Education Dept. at Allan Glen's School, Montrose Street, commences on September 18. Theory instruction will be given by A. Fraser (GM3AXX) on Tuesdays from 7 to 9.30 p.m. and Morse instruction by James Sey (GM8MJ) on Thursday evenings from 7 to 9.30 p.m. The fee for the entire course is 10s.

### Lincolnshire Hamfest

THE Annual Lincolnshire Hamfest will be held at the George Hotel, Spilsby, on Sunday, September 23, 1956. The programme will include a junk sale and High Tea. During the afternoon a Mobile Rally will be held, the control station being G8GI/M on 1925 kc/s. Members will assemble from 1 until 2.15 p.m.

Tickets, price 6s. 6d. each, may be obtained not later than September 20 from N. T. Hodgson (G2ABK), 3 Council House, Main Road, Hundleby, Spilsby.

### LONDON MEMBERS' LUNCHEON CLUB

will meet at the Bedford Corner Hotel, Bayley Street, Tottenham Court Road, at 12.30 p.m. on

Fridays, September 21 and October 19, 1956.

Telephone table reservations to HOL 7373 prior to day of luncheon. Visiting amateurs especially welcome.

ONCE again, emerging supreme among those Groups who used the twenty-four hours from 17.00 G.M.T. on June 2, 1956 to compile the 1000-plus scores now necessary to win high place in the National Field Day table was Bristol, triumphantly reclaiming the N.F.D. Shield. The Shield, first gained by this remarkably successful Group in 1952, and then held against all-comers in 1953 and 1954, was wrested from them by Gravesend in 1955, but now returns to its customary place, thanks to "Bristol fashion" operation from Hill Farm, Dundry, Somerset. From just over 400 contacts Bristol netted their highest-ever score of 1186 points: thus exactly equaling the all-time record set up by Gravesend last year.

In a hard-fought local "derby", the Stourbridge Group successfully reversed their 1955 placings with Coventry, and thus finish as "runners-up" with a total of 1148 points. As some recompense, Coventry carry off both the "A" station honours and also the "Best on 1.8 Mc/s" listings. Croydon continued their run as "Leading 'B' station". Generally, the top scores tended to be higher than ever, despite the down-pointing of unofficial portables, with nine groups exceeding 1000 points, compared with seven last year. Few fresh Groups managed to break into the firmly entrenched top ranks, though Chingford made a spectacular rise from 26th to 12th place.

The division of contacts between the various bands responded as predicted to the "new look" of sunspots: after many years 7 Mc/s replaced 3.5 Mc/s as the highest scoring band (Gravesend netted 366 points); while 14 Mc/s jumped from the bottom place it has occupied for some time almost to equal 7 Mc/s (Bris-

\* Disqualified for irregularities. † Invalid—late entry. ‡ Invalid—log incomplete.

tol's 363 points was more than double that of their 1954 score); highest scores on 3.5 Mc/s (Croydon's 347 points) and 1.8 Mc/s (Coventry's 265 points) were well down on 1955 points (when top scores were 439 and 325 points respectively). But although 14 Mc/s scores climbed up so sharply, the capricious fates that govern radio conditions played a sardonic joke on those who in anticipation of better DX had erected elaborate low-angle-radiation Vees and the like: for although the band stayed open throughout the night, DX signals were few and far between during the best part of the day, the band being filled by semi-local stations often less than 200 miles away. As a result, many of the points on this band were gained, most freakishly, from inter-N.F.D. portable station working. For example, Bristol gained only one-third of their 14 Mc/s points from DX and two-thirds from U.K. and European contacts, including almost 100 points from inter-G working. The full DX story is told in an accompanying table which shows the prefixes worked during each hour of the contest. Altogether more than 300 different DX stations were contacted by N.F.D. portables, including some 250 in all call areas of the United States.

In this "English summer" of "two fine days and a thunderstorm", weather conditions were, relatively speaking, good: many groups enjoyed hours of impeccable sunshine. High winds, which seriously interfered with aerial plans, were the chief cause of complaint. Some groups report a shortage of operators: many others deliberately restrict turns at the key to those with proven contest experience; finding that two or three skilled operators can keep a station on the air

for 24 hours at high efficiency. The starlight shift of 0100-0400 usually proves the most difficult to man—Bath appears to have solved the problem neatly by giving this "stint" to G3GOX, a YL operator!

The co-operation of so many Commonwealth and European portables was most welcome. Bermuda was particularly active, with signals from VP9AN/P, VP9AX/P, VP9CI/P and VP9CL/P audible throughout the night. VS1GL/P, VS9AS/P and VP6RV/P (operating under N.F.D. conditions with 5 watts input) were also worked by a number of stations anxious to collect 12 points. ZC4CK operating both as a portable and also later as a fixed station (it was remarkable how some of those who worked him continued to hear that "P" even after he went over to mains operation!) gains the award for the overseas station contributing the most points to competing stations. As usual, Swiss, German, Belgian and Irish portables contributed substantially to the enjoyment of the occasion.

#### Who used What

The gear and the operators that achieved the leading positions were:

**Bristol "A":** 6L6 v.f.o.—OV04-7 doubler—807 p.a. 1.8 Mc/s half-wave dipole, 7 Mc/s two half-wave dipoles. AR88D receiver. Power source 1½ kW 230 V 50 c/s Diesel-electric generator. Operators G2IK, '2FYT, '3CTN, '6RB.

**Bristol "B":** 6SK7—6F6-6F6 v.f.o.—6V6 buffer/doubler—6J5 doubler—807 p.a. 3.5 Mc/s half-wave doubler, 14 Mc/s two half-wave dipoles (one N-S, one vertical). Super Pro SP400X receiver. Power source as "A" station. Operators G3RQ, '3CHW, '6GN.

**Stourbridge "A":** 1.8 Mc/s 6AG7 Clapp v.f.o.—KT8 p.a. 7 Mc/s 6AC7 Clapp v.f.o.—6AC7 doubler—TT15 p.a. 1.8 and 7 Mc/s half-wave centre-fed dipoles. HRO receiver. Power source 12-volt accumulators and rotary converter. Operators G2OG, '3JSK, '8GF.

**Stourbridge "B":** 3.5 Mc/s SP61 v.f.o.—SP61 buffer—KT8 p.a. 14 Mc/s 6AC7 Clapp v.f.o.—6AC7 doubler—832 p.a. 3.5 Mc/s dipole, long-wire and 14 Mc/s ground

plane. CR100 receiver. 12 volt rotary converter from accumulators with 12 V petrol-electric charger on site. Operators G3AAQ, '3BMY.

**Coventry "A":** Z77—Z77—5763—5763—807 p.a. 250 ft. and 130 ft. end-fed, 7 Mc/s half-wave dipole.

The Medway Group. From right to left, G2BP, G3BSU, G3BRJ, G2CBA (A.R.), G3KNO, G3KSL and George. In front, the very willing junior helpers.

AR88 plus BC453 receiver. Petrol electric generator. Operators G2FTK, '5PP, '5SK, '6TD.

**Croydon "B":** EF80 v.f.o.—EF80 b.a./f.d.—EF80 b.a./f.d.—2E26 p.a. Three 138 ft. end-fed aerials, spaced 120°, used separately. Much modified AR88D receiver with mechanical filter, product detector, etc. Rotary generator and vibrator. Operators G3BFP, '4QK, '6LX. **Gravesend 7 Mc/s:** EF91 e.c.o.—EF91 b.a.—6V6 f.d.—807 p.a. Centre-fed 66 ft., 38 ft. high. HRO receiver. Petrol generator 230 V 60 c/s. Operators G3IEW, '3JLB.

#### How You Summed it up

"Vee beam (414ft per leg), carefully sited, was of little use . . . very windy, almost gale force, showers" —Glasgow. "Boiling tomato soup at two o'clock in the morning has to be tasted to be believed! . . . Weather conditions, cool but dry, just right for heaving heavy accumulators around Taplow Court." —Slough. "High winds upset aerial arrangements . . . thoroughly

G2BRR at the key and G4AP logging at the Swindon station G3KEU/P. G2BUJ is standing second from left. Although two receivers are visible they were not used simultaneously!

cover resulting in the band being open for less time: it is recognised that in some marginal cases a degree of hardship occurs, but that there is no great advantage to GM, GC, etc. is shown by the relatively low placings of outlying stations on this band.) "Disqualify all stations who jump the gun or are slow in stopping."—*Pontefract*. "Include 21 Mc/s."—*Peterborough* member. "Club call signs should be allowed and choice of frequency from 1.8–28 Mc/s."—*Lewisham*. "Since many people work five-day week, how about starting 5 hours earlier?"—*Bath*. "Still consider a v.h.f. band should be alternative to 14 Mc/s."—*Luton*. "Drum up more Commonwealth activity . . . list of stations as supplied is useless."—*Glasgow*. "List of stations extremely useful."—*Sheffield*. (Note: it is regretted that there were some errors in the list, but scores have been adjusted accordingly.) "P.a. valves should be limited to 8–10 watts anode dissipation."—*Weston-super-Mare*. (Note: this suggestion is frequently received. It should however be realised that a valve with 10 watts anode dissipation can be run at over 25 watts power input within its ratings; for Morse operation for 24 hours even this figure could be greatly exceeded. To ensure a 5 watts input it would be necessary to specify a valve with an anode dissipation of less than 1.5 watts—and then, if a Group wished to cheat on power, who could be certain that the valve listed was in fact used? It is surely better to leave the choice of valve open and trust the Groups and the T.R.s to see that the power limit is not exceeded.) "No comment on the rules, whatsoever, they will do fine for next year."—*Cannock and Lichfield*.

Deserting the v.h.f. bands for a moment, G3FZL is here seen operating the Norwood Group station G3IIR/P while G3IWA acts as logkeeper.

(Photo by G3IIR)

### From the Judges' Table

Whilst it is appreciated that many Groups and members take part in Field Day primarily with a view to pleasant activity in congenial company, without worrying overmuch about the question of points (it would indeed be a sad day were the social and lighter sides to be completely overshadowed by the spirit of competition), nevertheless the judges have no alternative but to regard each log as that of a serious entrant and potential award winner. Unfortunately at times this becomes difficult, for instance when checking entries it soon becomes very clear that an appreciable number of operators and/or those who prepare the logs for submission have never really studied the current rules. Every year several logs have to be completely re-scored, as the points claimed for the various types of contacts have little if any relationship with those given in the rules. No question of cheating is involved . . . most often the number of points claimed is less than those due.

Then there is time. Since it is now a G.P.O. regulation that all amateur logs be kept in G.M.T. most operators should have no difficulty in working to it. Yet quite a number of logs are submitted in B.S.T., while a few, whose operators are perhaps reviving war-time memories of open-air working, are in what appears to be Double Summer Time! No points have been deducted (*this year*) for such errors, but they seriously delay checking.

### Problem Picture

This imposing structure was not specially erected for Norwood Group although the aerial system did conform with the "rules and spirit" of N.F.D.!

(Photo by G3HJR)

Again, there is the accuracy of the logs. And here, it should be stressed that these remarks do not apply to a fair number of Groups who regularly produce really excellent logs. But those others! Sometimes this must be due to rusty Morse combined with a dislike of asking for repetitions or QRS in front of colleagues, but much more often do the faults seem to be due to the failure to transfer correctly to the log sheets what has been sent or received. The use of log-keepers is one dangerous practice, illegible handwriting another, particularly where the logs are copied out later. An often repeated example of bad logging is where a transposi-

### N.F.D. BREW!

tion occurs between the signal reports sent and received. Since the operator's code group is seldom transposed (for obvious reasons) this form of error can in most instances be clearly pin-pointed as a logging rather than an operating error . . . but it loses entrants many points just the same!

Of ever-growing importance—and this is true of almost all contests at the present time—is the number of occasions when contacts complete with signal reports and code groups are claimed by station "X" with station "Y" when actually "Y" is working "Z". Here again it is fairly easy to identify the culprit: it is the use by "Y" of that much abused procedure signal "BK" as a means of saving the time required to send his call-sign and that of the station with which he is in contact. The time is surely coming when good operators must decide to eschew this practice altogether during contests even if, as in the minority of cases, they are really equipped to work full break-in.

Otherwise the operating this year was generally very

The Ilford B station with G6HU operating and G3IRR keeping the log.

good, though some careless letter formation, particularly in the sending of call-signs, is reported. A certain amount of band-edge crossing, particularly on 7 Mc/s, has been drawn to the notice of the Committee, and this important matter will need the attention of all operators if we are not to run into serious trouble. Few rough notes were reported—and these were usually put right within a short time—but there seemed an increasing number of “jumpy” notes and a good deal of chirp from poor voltage regulation.

Map showing approximate location of the Groups who participated in the 1956 N.F.D. Event.

A breach of the rules that is rare but which does arise from time to time in N.F.D. (it once cost a Group the Shield) is operation by a non-member or by someone whose subscription has lapsed. This, of course, usually occurs without the knowledge of the T.R. and in such instances it is the practice to deduct all points gained by the operator in question. This year such deductions have lost Glasgow their chance of retaining the Scottish Trophy which, as a result, goes to Edinburgh and Lothians. A more serious matter altogether, since it involves an element of attempted concealment of deliberate wrong-doing, was brought to our attention by the T.R. of the Guildford group. It was found that during the night a member had “loaned” his name-code to a non-member and later signed the log for

## Contests Diary

- October 27-29 - CQ World Wide DX Contest<sup>1</sup>
- November 10-11 Top Band Contest No. 2
- November 24-25 R.S.G.B. 21-28 Mc/s Phone Contest<sup>2</sup>

<sup>1</sup> For details, see page 128, this issue.

<sup>2</sup> For rules, see page 480, R.S.G.B. Bulletin, May, 1956.

these contacts. The Committee has recommended to Council that this entry be disqualified. (The recommendation has been accepted and the entry disqualified—EDITOR.)

This year's new “summary sheets”, though regrettably placing some additional burden on those who valiantly prepare the entries on behalf of their Groups, proved an outstanding success from the viewpoint of the judges, and were largely responsible for allowing the summary of results to be announced in the August issue of the BULLETIN.

Check logs are gratefully acknowledged from G3ABM/P, G3BPM/P, G3FAU, G3INQ, G3WP, G5AO, G8TL—G8TL/M, VP6RV/P, VS1GL/P, VS2DZ, VS2FB, ZC4CK—ZC4CK/P. The late Jimmy Catt, G5PS also sent in a check log. He passed away a few hours after posting the log.

### Olympic Games, 1956

MEMBERS who would like an Olympic Games motor-car badge should write to Mr. F. W. T. Featherstone (B.R.S.4703), 2 Tarata Drive, Doveton, Dandenong, Victoria, Australia, enclosing £1 sterling.

### A Modern Transmitter for the Amateur

(Continued from page 103)

#### V.f.o. Input Power Measurements

A circuit is shown in Fig. 3 to ensure that the power supplied to the first stage is reasonably constant irrespective of frequency. L1 is 60 turns of 36 s.w.g. enamel wire close wound on a  $\frac{1}{2}$  in. diameter former with L2 (10

Fig. 3. Circuit for checking the level of the power input to V1. CR is a germanium diode while the values of L1, L2 and M are given in the text.

turns) close wound adjacent. The meter should have a f.s.d. not greater than 500 microamps. If a standard is available the instrument can be calibrated directly and the range extended by having various switched values of R1. However, for the purpose of obtaining constant drive it is adequate in its present form. To use it the driving oscillator should be terminated with the instrument and the output power arranged to be constant over the required frequency band by adjustment of the circuit constants in the oscillator.

# Society News

## Election of Council, 1957

IN accordance with Article 55 of the Society's Articles of Association the Council have nominated the following Corporate Members to fill the vacancies in the Council which will occur on December 31 next:—

### Officers:

President	Mr. D. A. Findlay, G3BZG
Executive Vice-President	Mr. L. E. Newnham, G6NZ
Honorary Treasurer	Mr. W. R. Metcalfe, G3DQ
Ordinary Members:	Mr. C. H. L. Edwards, G8TL
	Mr. J. H. Hum, G5UM
	Mr. A. O. Milne, G2MI
	Mr. W. A. Scarr, G2WS

Not later than October 24 next, any 10 Corporate Members may nominate any other Corporate Member to serve on the Council by delivering their nomination in writing in a single document to the Secretary, together with the written consent of such nominee to accept office if elected but each such nominator shall be debarred from nominating any other person for this election.

As a consequence of his nomination for the office of Honorary Treasurer, Mr. W. R. Metcalfe will resign as Zone A Representative on December 31, 1956.

### Zonal Representatives

Not later than October 24 next any 10 Corporate Members resident in Zones A, B and E, may nominate any other duly qualified Corporate Member to serve as a Zonal Representative on the Council by delivering their nomination in writing in a single document to the Secretary together with the written consent of such nominee to accept office if elected, but each such nominator shall be debarred from nominating any other person for this election.

Candidates for Zonal Representative must be resident within the Zone for which they are nominated and the nominators must be resident in that Zone.

The Zones concerned in the forthcoming election comprise the following Regions:—

Zone	Regions
A	1 and 2
B	3 and 4
E	10 and 11

The present Zone B Representative (Mr. H. W. Mitchell, G2AMG) is eligible for re-election. The office of Zonal Representative in Zone E is at present vacant.

### Society Trophies

SOCIETY Trophies have been awarded by the Council for the current year to the following members:—

**ROTAB:** Mr. P. J. Broom, G5DQ, in recognition of his consistent DX work over a period of many years and for his regular support of B.E.R.U. Contests and National Field Day events.

**Wortley Talbot:** Mr. G. A. Jeapes, G2XV, in recognition of his pioneer work on 420 Mc/s and experimental work on other v.h.f. bands.

**Courtenay Price:** Messrs. I. Waters, G3KKD/T and I. Howard, G2DUS, in recognition of their outstanding work in the field of Amateur Television culminating in consistent transmission of live pictures over a 38 mile path using home-constructed equipment.

**Founders:** Mr. A. W. Timme, G3CWW, in recognition of his distinguished services to the Society in connection with the Contests Committee.

**Calcutta Key:** Dr. A. C. Gee, G2UK, for outstanding service to the cause of international friendship through the medium of Amateur Radio.

**\*B.E.R.U. Senior Rose Bowl:** Mr. G. J. Dent (VQ4AQ), winner Senior Contest.

**\*B.E.R.U. Junior Rose Bowl:** Mr. J. C. van Wyk (ZS6R), winner Junior Contest.

**B.E.R.U. Receiving Rose Bowl:** Mr. A. R. Smith (B.R.S.20206), winner Receiving Contest.

**Col. Thomas Rose Bowl:** Mr. F. J. U. Ritson (G5RI), leading U.K. station in B.E.R.U. Senior Contest.

**N.F.D. Shield and Replica:** Bristol Group.

**N.F.D. Shield Replicas:** Coventry and Croydon Groups.

**Scottish N.F.D. Trophy:** Edinburgh and Lothians Group.

**Bristol N.F.D. Trophy:** Boston Group.

*\*Due to the risk involved in sending the Silver Rose Bowls abroad, miniatures only will be forwarded to the winners. Their names will, however, be engraved on the respective Bowls.*

### Norman Keith Adams Prize and Bevan Swift Memorial Premium

ACTING on the advice of the Technical Committee, the Council has decided to award the Norman Keith Adams Prize for 1956 to Mr. G. A. Bird (G4ZU), author of a paper entitled "The Minibeam". This paper was considered to be the most original published in Volume 31 of the Society's Journal.

Also acting on the advice of the Technical Committee, the Council has decided to award the Bevan Swift Memorial Premium for 1956 to Mr. A. L. Mynett (G3HBW), author of a paper entitled "Transmission Line Tuned Tank Circuits". His paper was considered to be the most meritorious published in Volume 31 of the Society's Journal.

### Varney Trophy

THE Council has been pleased to accept from Mr. R. L. Varney, G5RV (now in Venezuela), a silver trophy which will be awarded annually to the Corporate Member of the Society who, in the opinion of the Council, acting on the advice of the Technical Committee, has contributed to the Society's Journal the most meritorious article on the subject of Amateur Radio interference.

The Council have unanimously accepted a recommendation of the Technical Committee to award the Varney Trophy for 1956 to Mr. R. H. Hammans (G2IG) for his article "Diagnosis of TVI," published in the June, 1956, issue of the R.S.G.B. BULLETIN.

### Frequency Measuring Test

THE first of a series of Frequency Measuring Tests to be held on the last Sunday of each month will take place on Sunday, September 30, using the 12.00 B.S.T. transmission from GB2RS as the frequency to be measured. GB2RS will be found within a few kilocycles per second of 3600 kc/s.

Following the telephony news bulletin but before the summary in Morse code, there will be a three-minute transmission consisting of periods of about 15 seconds when the carrier will be unmodulated, separated by the telephony announcement, "Frequency Measuring Test from GB2RS."

Measurements should be made as accurately as possible during this three-minute period and the results posted to reach R.S.G.B. Headquarters not later than Tuesday, October 2.

Results of the test will be announced in the news bulletin from GB2RS on Sunday, October 7.

#### DX Listeners' Century Award

THE following rules governing the issue of the new DX Listeners' Century Award have been approved by the Council:—

- (1). The Award may be claimed by any person not holding an Amateur Radio transmitting licence who submits evidence that he has received signals from Amateur Radio stations located in at least 100 countries.
- (2). The Award will be issued free of charge to members of the R.S.G.B. and to non-members on payment of the standard fee.
- (3). The List of Countries for which cards may be submitted will be the same as that used for the A.R.R.L. DX Century Club Certificate except that cards from Ruandi-Urandi (OQ0) and Sicily (IT) will be accepted. Cards from unlicensed foreign stations operating in British Antarctic territories will not be accepted.
- (4). Stickers will be available for every 25 additional countries confirmed.
- (5). The general rules governing R.S.G.B. certificates and awards will apply to this Award.

#### Region 3 Representative

BECAUSE of ill-health Mr. J. Timbrell, B.Sc. (G6OI) of Kinver, near Stourbridge, Worcs, has been compelled to resign as Region 3 Representative, an office he has held since January, 1954.

Members everywhere, and especially those in Region 3, will be sorry to learn of Mr. Timbrell's illness and will join Headquarters in wishing him a speedy recovery.

#### Bye-election

Not later than October 31, 1956, any ten Corporate Members resident in Region 3 may nominate any other duly qualified Corporate Member resident in the Region for the office of Regional Representative by delivering their nomination in writing to the General Secretary together with the written consent of such person to accept office if elected.

In the event of more than one person being nominated a Ballot will be conducted, details of which will be published in the November, 1956, issue of the BULLETIN.

#### Region 9 Representative

MR. H. A. Bartlett (G5QA) of Exeter, who has held the office of Region 9 Representative for many years, has advised Headquarters that he will be resigning from that office at the end of the current year.

#### Bye-Election

Not later than October 31, 1956, any ten Corporate Members resident in Region 9 may nominate any other duly qualified Corporate Member resident in the Region for the office of Regional Representative, by delivering their nomination in writing to the General Secretary, together with the written consent of such person to accept office if elected.

In the event of more than one person being nominated a Ballot will be conducted, details of which will be published in the November, 1956, issue of the BULLETIN.

#### LONDON MEETINGS

The following programme of meetings at the Institution of Electrical Engineers, Savoy Place, Victoria Embankment, London, W.C.2, has been arranged.

October 26, 1956: "MORE ABOUT THE ANTENNA-MATCH" by F. Hicks-Arnold (G6MB).

November 30, 1956: "1250 Mc/s OPERATION." Discussion opened by Members of the London U.H.F. Group.

December 14, 1956: Annual General Meeting and Presentation of Trophies.  
(To be held in the Lecture Theatre of E.L.M.A. in same building as I.E.E.)

January 25, 1957: Presidential Address followed by Lecture and Demonstration of MINIATURE AERIALS by F. Charman, B.E.M. (G6CJ).

March 1, 1957: "MODERN AMATEUR COMMUNICATION RECEIVER DESIGN." by R. G. Lane (G2BYA).

March 29, 1957: "MOBILE OPERATION." Discussion opened by F. W. Crabtree (G3BK), C. H. L. Edwards, A.M.I.E.E. (G8TL) and R. G. Shears (G8KW).

#### Amateur (Sound) Licence Amended

THE following announcement appeared in the *London Gazette* on August 17, 1956:—

"TO ALL HOLDERS OF AMATEUR (SOUND) LICENCES. The Postmaster-General hereby gives you notice that with effect from the 15th day of August, 1956, the terms, provisions and limitations of all Wireless Telegraphy Licences granted by him on or after the 1st day of June, 1954, and before the date of this notice of the type and under the title of 'Amateur (Sound) Licence' shall be varied as follows:—

The following new Clause 1 (1) (c) shall be added:—  
"to use the Station, as part of the self-training of the Licensee in communication by wireless telegraphy during disaster relief operations or during any exercise relating to such operations conducted by the British Red Cross Society, for the purpose of sending to other amateur Stations such messages as the Licensee may be requested by the said Society to send, and of receiving from any other amateur Station such messages as the person licensed to use such other amateur Station may be requested by the said Society to send".

Clause 16 (2) shall be amended to read as follows:—  
"Nothing in this licence shall be deemed to authorise the use of the Station for business, advertisement, or propaganda purposes or (except as provided by clause 1 (1) (c) hereof) for the sending of news or messages of or on behalf of, or for the benefit or information of, any social, political, religious or commercial organisation, or anyone other than the Licensee or the person with whom he is in communication".

#### 1215-1300 Mc/s Band Extended

FOLLOWING a request made by the Society the Post Office has agreed to extend the 1215-1300 Mc/s band up to 1325 Mc/s on a basis of non-interference with other services. The raising of the upper limit of the band to a higher frequency will enable amateurs to operate on harmonically related frequencies in the 144, 420 and 1250 Mc/s bands. This was not possible whilst the upper limit of the later band was 1300 Mc/s.

#### Technical Articles Wanted

THE Editor will be pleased to consider for publication articles which have a bearing on any aspect of Amateur Radio, including Amateur Television. Short articles of a constructional nature are particularly required.

# Council Proceedings

*Résumé of the Proceedings at a Meeting of the Council of the Radio Society of Great Britain, held at New Ruskin House, Little Russell Street, London, W.C.1, on Monday, July 16, 1956, at 6 p.m.*

**Present.**—The President (Mr. R. H. Hammans in the Chair), Messrs. W. H. Allen, H. A. Bartlett, C. H. L. Edwards, K. E. S. Ellis, D. A. Findlay, F. Hicks-Arnold, J. H. Hum, R. G. Lane, W. H. Matthews, W. R. Metcalfe, A. O. Milne, H. W. Mitchell, L. E. Newnham, W. A. Scarr, J. Taylor, John Clarricoats (General Secretary) and John A. Rouse (Deputy General Secretary).  
Mr. H. A. M. Clark was present by invitation during the discussion on the Stresa Conference.

## Membership

(a) *Resolved* (i) to elect 44 Corporate Members and 4 Associates.

(b) The Secretary reported that of the 597 members whose subscription became due on April 1, 1956, 72 became 3 months overdue on June 30, 1956. Of this number 12 were London, 42 were Country, and 15 were Overseas Members and 3 were Associates. Of those overdue 8 London, 26 Country and 11 Overseas members held call-signs.

(c) The Secretary reported that 12 of the members referred to in (b) above wrote to resign during the three weeks ended July 14, 1956. Of this number one gave no reason for resigning, seven stated they had lost interest in Amateur Radio, one gave personal reasons, one had resigned for financial reasons and one was suffering from ill-health.

## Membership as at June 30, 1956

The Secretary reported that the membership of the Society as at June 30, 1956, was 8,102 (Licensed Members 5,141, B.R.S. Members 2,714, Associates 247) compared with 8,159 (Licensed Members 5,046, B.R.S. Members 2,849, Associates 264) a year earlier. The drop of 57 was the lowest recorded for many years.

## Stresa Conference

Messrs. Milne, Clark and Scarr reported on the Stresa Conference.

After general discussion it was agreed to consider the Recommendations of the Conference at the August, 1956, Meeting of the Council.

## Radio Amateurs' Examination

It was reported that the G.P.O. had come to the conclusion having regard to the increasing importance of good wireless discipline at a time when the radio spectrum is becoming rapidly more congested, that greater emphasis needs to be placed on those parts of the Radio Amateurs' Examination syllabus which deal with such matters as licensing conditions, operating procedure and the control of interference.

A draft of the revised scheme for the examination was submitted.

The effect of the G.P.O. proposals would be that an applicant for an amateur licence would need to obtain a minimum qualifying standard in the subjects mentioned. This is not the case with the present scheme of examination.

*Resolved* to inform the G.P.O. that the Society agrees to the proposal to give greater emphasis to those parts of the R.A.E. syllabus which deal with licence conditions, operating procedure, the control of interference, etc.

## Service Exemptions

It was reported that the G.P.O. had been looking into

the related question of the exemptions from the Radio Amateurs' Examination which are at present permitted. The G.P.O. had found that many of the Service qualifications are by no means easy to compare satisfactorily with the standards considered to be appropriate for a United Kingdom amateur. Of necessity none of them adequately cover the subjects referred to above under "Radio Amateurs' Examination." In these circumstances the G.P.O. propose to inform the Service Departments of their intention to discontinue the post-war exemption system but as the system originated with a suggestion from the R.S.G.B. the G.P.O. were anxious to receive the views of the Society before making an approach to the Services.

After a proposal that qualified Services personnel be required to pass only Part I of the R.A.E. (i.e., that part which relates to licence conditions, operating procedure and the control of interference, etc.), had been rejected, it was *Resolved* that the G.P.O. be informed that the Society supports the proposal to discontinue the post-war exemption system.

## DX Listener's Century Certificate

*Resolved* (i) to offer a DX Listener's Century Certificate free to non-transmitting members as a means of encouraging short-wave listening, (ii) to offer the certificate to non-members on payment of a nominal fee.

## R.S.G.B. Certificates

To meet increased production costs and higher postage rates it was *Resolved* that the charge made to non-members for R.S.G.B. certificates shall be increased to 7s. (\$1).

## "Intruders"

It was reported that Major D. W. J. Haylock (G3ADZ) had provided valuable information for the Stresa Conference on the activities of non-amateur stations heard operating in "exclusive" amateur bands. Major Haylock's report was submitted to the Administrative Committee of the Conference and as a result of the subsequent discussion a special sub-Committee was set up to prepare a recommended form of procedure for reporting "intruders." The sub-Committee's report had been approved by the Conference.

*Resolved* to thank Major Haylock for his valuable report and to enquire from him whether he would be willing to undertake the work of organizing a group of qualified official receiving stations to prepare reports on persistent intruders.

## Amateur Radio Exhibition, 1957

The President, Mr. Scarr and the Secretary reported on a meeting which they had had with Mr. P. A. Thorogood.

*Resolved* (i) to give Mr. Thorogood a reasonably free hand to organize an Exhibition in London during the autumn of 1957, which would be designed to cater for constructors, experimenters and amateurs with a view to increasing R.S.G.B. membership.

(ii) to accept Mr. Thorogood's offer to pay to the Society the sum of £100 for the privilege of being granted permission to organize the Exhibition.

(iii) to invite Mr. Thorogood to submit a formal contract to the Society as soon as possible.

(iv) to request Mr. Thorogood to submit occasional progress reports to the Council.

#### **DX Convention**

*Resolved* (i) to agree in principle to the holding of a DX Convention in London.

(ii) to appoint Messrs. D. A. Findlay, F. G. Lambeth, J. D. Kay, F. Hooson, G. A. Bird and P. R. Solder, to serve on the DX Convention Committee and that the Committee be given power to co-opt.

#### **R.A.E.N.**

It was reported that the Postmaster General had agreed in principle to participation by the R.A.E.N. in British Red Cross Society rescue work and relief exercises run by the Red Cross.

It was further reported that a meeting between representatives of the Society and the G.P.O. would be held on July 23 to discuss the details of the arrangements. (At the meeting the R.A.E.N. Committee was represented by Lt.-Col. Dunn (Chairman), Dr. A. C. Gee (Vice-Chairman) and Mr. C. L. Fenton (Hon. Secretary). Mr. A. O. Milne (representing the G.P.O. Liaison Committee), the General Secretary and the Deputy General Secretary were also present.—EDITOR.)

#### **Accident Emergency Service**

*Resolved* to take no action on a suggestion put forward by Mr. P. Goudime that the Council should set up some form of monitoring service to assist communications in the event of an accident occurring on, for example, a lonely road. Mr. Goudime suggested that amateurs who possess mobile equipment should be permitted to operate on the national network of the Automobile Association (85 Mc/s).

It was agreed to inform Mr. Goudime that his proposals would contravene the terms of the amateur as well as the broadcast licence.

#### **Mr. E. Brown, G3CSP, of Sheffield**

Mr. Metcalfe and the General Secretary reported upon further difficulties which had arisen in connection with this case.

#### **Reports of Committees**

*Resolved* to receive and adopt as Reports the Minutes of Meetings of the R.A.E.N. Committee (June 30, 1956), *ad hoc* Committee (July 10, 1956) and Exhibition (Home Constructors' Section) Committee (July 11, 1956). Action was taken on the various recommendations contained therein.

The meeting terminated at 9.50 p.m.

#### **First 144 Mc/s Field Day, 1956**

It is regretted that the 144 Mc/s Field Day entry of Mr. R. H. Pounder (G3DVQ) was omitted from the table of results published in the August issue. G3DVQ/P operated from near Guildford, Surrey, and scored 2,245 points from 43 contacts. Best contact was 85 miles. This score would have given G3DVQ/P the 27th position in the table.

#### **"Aerial Reflections"**

ON page 59 of the August issue of the BULLETIN, in which the Reflex Aerial was described, the last sentence of the section headed "Construction for 440 and 1250 Mc/s" should have read "The velocity factor of both these cables is 2/3, so the quarter wavelength should be 1970/f inches, or 4½ in. for 440 Mc/s and 1½ in. for 1250 Mc/s; the shortest possible joints should be used."

## **Radio Amateur Emergency Network**

By C. L. FENTON (G3ABB)\*

RELEASE of the news of the approval by the Postmaster General of co-operation between the Radio Amateur Emergency Network and the British Red Cross Society, has certainly caused an awakening of interest in the Network throughout the country. Many letters of congratulation have been received but none of criticism!

As stated last month, the names and addresses of all E.C.O.s will now be passed on to the B.R.C.S. for the use of their Regional Officers, who will then approach the nearest E.C.O., if contact has not already been made by the E.C.O. In some cases this information has already been given, at the direct request of certain Red Cross directors. In this connection it must again be stressed that individual members should not make an approach to their local B.R.C.S. headquarters. Form groups and nominate E.C.O.s, so that they can be the liaison with the Red Cross authorities.

#### **No Priority Claims to Frequencies**

The attention of all R.A.E.N. members is drawn to the fact that official recognition of the Network *does not* give them priority claim to any frequencies. No such claim must be made except in case of genuine emergency. Emergency calling frequencies should, however, continue to be monitored.

#### **R.A.E.N. Rally**

The rules for this year's Rally—to be held on October 21—will be found elsewhere in this issue. Those who intend to participate are reminded that authorized test phrases and approved log sheets must be obtained from the Hon. Secretary, R.A.E.N. Committee, prior to the date of the contest. Each request should be accompanied by a stamped addressed envelope.

#### **Lectures on Red Cross Organization**

Co-operation between R.A.E.N. and the British Red Cross Society makes it advisable for members to be aware of the general organization of that society. Lectures on this subject can be arranged through the writer.

#### **Group News**

The E.C.O. for Pembroke Dock, recovering from a recent illness, appeals for more members, as does the E.C.O. for Stratton-on-the-Fosse, near Bath. It is hoped to revive activity in the Stirlingshire area of Scotland, the E.C.O. apologizing for a recent slackening off due to pressure of work.

In Armoy, Northern Ireland, the group has mobile equipment available, including 10 metre handy-talkies and ZC1 Mk. IIs in cars. Incidentally, the group wish to thank the designer of the handy-talkie (Bernard Howlett) for his assistance in procuring many of the components required.

#### **E.C.O. Resignations and Appointments**

Mr. H. Hunt has resigned as E.C.O. for Acle, nr. Norwich, and Mr. A. Swindon as E.C.O. for Sidcup, Kent. Mr. G. Lancefield (G3DWQ), 35 Brixton Road, Frenchwood, Preston, Lancs., has been appointed acting E.C.O. for the Preston area.

The need for new members and E.C.O.s in all parts of the British Isles continues, and the Hon. Secretary will be pleased to hear from volunteers.

Items for inclusion in the next R.A.E.N. column should reach the writer not later than September 20.

(Phone: Danbury 518)

# Representation 1957-1958

## Election of County Representatives

IN accordance with established practice, an election of County Representatives is due to take place this year with effect from January 1, 1957.

### Nominations

Not later than October 31 next, any ten Corporate Members resident in a particular County (or Group of Counties, as the case may be) may nominate any other duly qualified Corporate Member resident in that County (or Group of Counties) for the office of County Representative, by delivering their nomination in writing to the General Secretary, together with the written consent of such person to accept office if elected.

### Period of Office

County Representatives will hold office for a period of two years as from January 1, 1957.

### Confirmation of Appointment

County Representatives will only be confirmed in their appointment if the total membership in the County (or Group of Counties) they propose to represent is in excess of 25.

### Vacancies

In the event of no nomination being received prior to November 1, 1956, from the Corporate Members resident in a particular County (or Group of Counties) the Council reserves the right to make an appointment.

### Ballots

In the event of more than one person being nominated for a particular office a Ballot will be conducted, details of which will be published in the November, 1956, issue of the R.S.G.B. BULLETIN.

### Resignations

If for any reason an elected or appointed Representative wishes to resign his office he should notify Headquarters who will advertise the vacancy. Local Members cannot automatically appoint another member to undertake the duties of a Representative who has resigned.

The Council reserves the right to call upon any Representative to resign his office if, in their opinion, he is considered to be unsuitable or unsatisfactory.

### Local Societies

It is not permissible for local societies, whether affiliated to the R.S.G.B. or not, to nominate members to serve as R.S.G.B. Representatives.

### Present County Representatives

All present County (or District) Representatives go out of office on December 31, 1956.

### Regions and Counties

The following is a list of the Regions and Counties (or Districts) forming them:—

**Region 1** (North Western).—Cheshire; Cumberland; Lancashire (East); Lancashire (West); Westmorland; the Isle of Man.

**Region 2** (North Eastern).—Durham, Northumberland; Yorkshire (East); Yorkshire (North); Yorkshire (West).

**Region 3** (West Midlands).—Herefordshire; Shropshire; Staffordshire; Warwickshire; Worcestershire; Birmingham (Postal Area).

**Region 4** (East Midlands).—Derbyshire; Leicestershire and Rutland; Lincolnshire; Northamptonshire; Nottinghamshire.

**Region 5** (Eastern).—Bedfordshire; Cambridgeshire; Essex (outside London Region); Herefordshire (outside London Region); Huntingdonshire; Norfolk; Suffolk.

**Region 6** (South Central).—Berkshire (outside London Region); Buckinghamshire (outside London Region); Gloucestershire (excluding the Bristol Area); Hampshire; Oxfordshire; Wiltshire; the Channel Islands.

**Region 7** (London).—London North; London South; London South-East; London South-West; London East; London West.

*Notes.*—(1) In the London Region the six Representatives concerned are known as District Representatives.

(2) The London Region covers the whole of Middlesex and Surrey and all other territory within 25 miles radius of Charing Cross.

**Region 8** (South Eastern).—Kent (outside London Region); Sussex.

**Region 9** (South Western).—Bristol; Cornwall; Devonshire; Dorset; Somerset.

**Region 10** (South Wales).—Brecknockshire; Carmarthenshire; Pembrokeshire and Cardiganshire; Glamorgan; Monmouthshire and Radnorshire.

**Region 11** (North Wales).—Anglesey and Caernarvonshire; Denbighshire; Flintshire; Merionethshire and Montgomeryshire.

**Region 12** (North Scotland).—Aberdeen, Banff and Kincardine; Angus and Perth; Moray and Nairn; Inverness, Ross, Sutherland, Caithness, Orkney and Shetland.

**Region 13** (East Scotland).—Berwick; Peebles; Roxburgh and Selkirk; East, Mid- and West Lothian; Fife and Kinross.

**Region 14** (West Scotland).—Argyll and Dumbarton; Ayr, Bute, Dumfries, Kirkcudbright and Wigtown; Clackmannan and Stirling; City of Glasgow (Postal Area), Lanark and Renfrew.

**Region 15** (Northern Ireland).—Antrim; Armagh; Down; Fermanagh; Londonderry, Tyrone.

### Radio Research 1955

**R**ADIO Research 1955 (H.M.S.O., 3s. 6d.) describes the work carried out by the Department of Scientific and Industrial Research last year. Of particular interest are the reports on long hop transmissions, semi-conductors, ferrites and long-distance v.h.f. propagation by scattering.

### Changes of Address

When notifying Headquarters of a change of address, Society Representatives should state clearly that they are Representatives. Frequently a change of address is received and entered on a member's record card but as no mention is made in the notification that he is a Representative the master file of Representatives is not corrected.

# Tests and Contests

## 144 Mc/s Contest, 1956

CONDITIONS during the contest were almost universally reported as excellent, and this is reflected by the 50 per cent increase in the score of the winner, H. Beaumont (G5YV), who repeats his success in last year's event.

Although the number of entries received (from less than 15 per cent of the stations reported as active) was lower than for the 1955 contest, this would appear to be accounted for largely by the rule barring entries from portable stations. It is interesting to note that in spite of this change in the rules rather more portable stations (33) were active than usual to support the fixed-station contest and return the compliment for the support given by fixed stations in the 144 Mc/s field days. Few comments were made on this change in the rules, and the Contests Committee would be glad to hear from operators who have strong views for or against portable participation in this contest.

At one end of many of the longest-distance contacts was G13GXP, including the furthest distance reported, a 360-mile contact with G3FAN. Contacts were made with Belgium, Eire, France and Holland.

G8DA commented favourably on the prevalent use of c.w. "for a change," and G2DVD rather despairingly on the high level of activity during the contest period as compared with the "usual half-dozen." Although several other competitors commented on this point, a careful check reveals that the total number of stations active was about 60 fewer than last year. Shortly after the contest ended G2DVD's station was struck by lightning and some damage was suffered, but the v.h.f. gear escaped unscathed.

G5YV made 99 contacts at an average distance of over 126 miles per contact. The runner-up, G3FAN, had 98 contacts at an average of over 103 miles.

Power input varied from 10 watts to an 832 (G4JJ/A) to 150 watts to push-pull 826s (G5MA). The 829 and its variations, 829B and 3E29, were used by over 50 per cent of the stations submitting entries; other valve types used were: 832, QV06/40, p/p 826, p/p TT11, RK34, QV03/20. A review of aeriols shows that the Yagi

is losing ground slightly and that colinear stacks and skeleton-slot arrays are gaining in popularity. Converters with tunable oscillators were favoured over crystal-controlled converters in the ratio of about two to one.

Check logs are acknowledged from F8GH, G2UJ, G3BA/P, G3BEX/P, G3CNF, G3DO/P, GW3GWA/P, G3KZS/P, G3MI, G8UQ/P.

## VK/ZL DX Contest, 1956

THE New Zealand Association of Radio Transmitters and the Wireless Institute of Australia invite all amateurs to participate in this year's VK/ZL contest. Rules for overseas stations follow those for previous years and may be summarized as follows.

- Sections.**—Phone: 24 hours from 10.00 G.M.T. Saturday, October 6, to 10.00 G.M.T. Sunday, October 7.  
C.W.: 24 hours from 10.00 G.M.T. Saturday, October 13 to 10.00 G.M.T. Sunday, October 14.
- Scoring.** One point will be scored for each contact on a specific band with any VK/ZL district. The final score will be derived by multiplying the total contacts on all bands by the total number of VK/ZL districts worked on all bands. These are ZL1, 2, 3, 4; VK1, 2, 3, 4, 5, 6, 7, 9.
- Serial Numbers** will consist of six figures (five for phone), made up of the RST report plus three figures which should commence with 001 and increase by one for each successive QSO—e.g. 002, 003, etc.
- Logs.** (a) Must show in this order: date, time in G.M.T., call-sign of station contacted, serial sent, serial received, band. Please underline each new VK/ZL district when contacted and use separate logs for each band used.  
(b) Summary Sheet to show—call-sign, name and address (use block letters), details of rig, TOTAL SCORE by showing total of districts worked on all bands and total contacts on all bands. (Districts multiplied by contacts=Total Score.) Sign a declaration that all rules were obeyed.
- Awards.** Attractive certificates to the highest scorer in each country, and to each call area in the U.S.A. Other certificates will be awarded depending upon the number of logs received from each country and the activity on each band.
- Listeners' Section.** To count for points, a VK or ZL station must be heard in a contest QSO, and the following details noted in the log—date, time in G.M.T., call of the station heard, call of the station being called, RS(T) of station heard, serial number sent by the calling station, band. Scoring is on the same basis as for the transmitting section and the log should be similarly set out.
- Logs should be posted to reach NZART, Box 489, Wellington, N.Z., on or before January 21, 1957.

## CQ World-wide DX Contest

THE operating periods for the CQ World-wide DX Contest (formerly the International DX Contest) are as follows:—

- Telephony Sections: 02.00 G.M.T., October 20, to 02.00 G.M.T., October 22.  
Telegraphy Sections: 02.00 G.M.T., October 27, to 02.00 G.M.T., October 29.

Serial numbers to be exchanged will consist of the RST (or RS) report followed by the number of the Zone in which the competitor is located. Stations in Zones 1 to 9 will prefix their Zone numbers with zero, i.e., 01, 02, etc.

Contacts may be made in any band from 1.8 to 28 Mc/s. Three points will be scored for contacts between stations in different continents and one point for contacts with stations in the same continent. Contacts between stations in the same country score no contact points but may be made for the purpose of Zone and/or country multipliers. Only one contact with the same station on one band counts for points. A multiplier of one is allowed for each Zone contacted on each band and a multiplier of one for each country worked on each band.

The contest will be divided into the following sections:—  
(a) Single operator phone; (b) Multi-operator phone; (c) Single operator c.w.; (d) Multi-operator c.w.; (e) Novice c.w. There will also be an inter-club competition in which the club scores will be the combined scores of members participating.

Entries, which must be postmarked not later than December 1, 1956, should be sent to the Contest Committee, CQ Magazine, 67 West 44th Street, New York 36, N.Y., U.S.A.

## Regional & Club News

**Amateur Radio Club of Nottingham.**—The club, which is the radio section of the Sherwood Community Association, took part in the annual Sherwood garden party, G3IQM operating on 3.5 Mc/s phone with the help of G3JKO and A. E. Gwynne. The club station G3EKW is active. *Hon. Secretary:* J. W. Rayner, 28 Tettenbury Road, Basford, Nottingham.

**Bexleyheath.**—Council Member W. H. Matthews (G2CD), Zonal Representative for South Eastern England, will be the chief speaker at a meeting to be held on October 18 at The Congregational Hall, Chapel Road, Bexleyheath. Mr. Matthews will answer questions and discuss Society policy. All local members are invited to attend.

**Bristol.**—At the August meeting a lecture on "Keying" was given by R. G. Lane (G2BYA) who will open a discussion on the design of a simple TVI-proof transmitter for the DX bands at the meeting on September 21. On October 5 there will be a recorded talk on "Aerials" by F. J. Charman, B.E.M. (G6CJ). Slow Morse classes are held on Tuesdays at 7.30 p.m. at 53 Yew Tree Drive, Kingswood, under the direction of G3KPT. *Hon. Secretary:* D. F. Davies (G3RQ), 51 Theresa Avenue, Bishopston, Bristol, 7.

**British Amateur Television Club (Chelmsford Group).**—G2DUS/T was due to describe and demonstrate his new flying spot slide scanner on September 13. The next meeting will be at G3CVO/T on October 11 at 7.30 p.m., when G3VI will conclude his series of talks on 70 cm r.f. equipment. *Hon. Secretary:* M. Barlow (G3CVO), 10 Baddow Place Avenue, Great Baddow, Essex.

**Crystal Palace & District Radio Club.**—On September 15 David Deacon (G3BCM) will give a talk on his home-built transmitter-receiver. At the meeting on October 20 at 7.30 p.m. in Windermere House, Westow Street, S.E.19, G. A. Bird (G4ZU) will describe his four band Minibeam.

**Edinburgh Amateur Radio Club.**—Weekly meetings on Wednesdays at Unity House, Hillside Crescent, have commenced and visitors and prospective members are invited to attend. Full details of activities may be obtained from the *Hon. Secretary:* M. Darke (GM3KKG), 44 Howe Street, Edinburgh, 3.

**Harrow.**—Meetings of the Radio Society of Harrow are held on Fridays at 8 p.m. in the Science Laboratory, Raxeth

Manor Secondary Modern School, Eastcote Lane, South Harrow. On September 21, G2TA will give a talk on valve theory. *Hon. Secretary:* S. C. J. Phillips, 131 Belmont Road, Harrow Weald, Middlesex.

**Midland Amateur Radio Society.**—Meetings are held on the third Tuesday in each month at the Birmingham Institute, Paradise Street, Birmingham, commencing at 7.30 p.m. *Hon. Secretary:* C. J. Haycock (G3JDJ), 360 Portland Road, Edgbaston, Birmingham, 17.

**Newbury & District Amateur Radio Society.**—The Society's winter programme of lectures opens on September 28 at Elliott's Canteen, West Street, Newbury, when the speaker will be The Astronomer Royal (Dr. R. v. d. R. Woolley), whose subject will be "Astronomy and Cosmology." The Annual Hamfest will take place on October 14. Tickets for both these events may be obtained from the *Hon. Secretary:* John Henderson, The Bungalow, Brook Street, Great Bedwyn, Marlborough, Wilts.

**Oxford & District Amateur Radio Society.**—The next meeting of the Society, on October 10, will be held at the new headquarters at the Cherwell Hotel, Water Eaton Road, Oxford, N. *Hon. Secretary:* J. Hickling (G3GCS), 33 Chestnut Road, Botley, Oxford.

**Plymouth Radio Club.**—Meetings are held on alternate Tuesdays at 7.30 p.m., at the Virginia House Settlement, Barbican, the next being on September 18. *Hon. Secretary:* C. Teale (G3JYB), 3 Berrow Park Road, Peverell, Plymouth.

**Rotherham Radio Club.**—The club meets on the first Wednesday in each month at 7.30 p.m. in the Photographic Society's Room, "The Crofts," Moorgate. Morse classes have commenced and instruction for the R.A.E. will start shortly. *Hon. Secretary:* J. H. Johnson (G3ECV), 2 West Street, Rotherham.

**Sheffield & District Amateur Radio Society.**—Meetings at Digswell House are arranged for 7.30 p.m. on September 21, September 28 (Transmitter demonstration by G. R. Johnson), October 5 ("Photo-sensitive Devices," by J. Atkins) and October 12 (Film-strip Lecture).

**South Manchester Radio Club.**—"The Propagation of Radio Waves" is the title of the talk to be given by N. Ashton (G3DQU) at the meeting on September 21. The A.G.M. will be held on October 5. A course in preparation for the Radio Amateurs' Examination will start on October 18 at 8 p.m. and be continued on succeeding Monday evenings under the supervision of G3DQU. All meetings are held at Ladybarn House, Mauldeth Road, Fallowfield, Manchester, 20.

Members of the Spen Valley Amateur Radio and Television Society inspected the M/V Prince Philip during the Society's annual outing to Grimsby.

# Forthcoming Events

## REGION 1

**Region 1 O.R.M.** — November 11, Bradford Hotel, Liverpool.  
**Blackpool (B. & F.A.R.S.)** — September 25, 7.30 p.m., 35 Whitegate Drive, Blackpool.  
**Bury (B.R.S.)** — October 9, 8 p.m., George Hotel, Kay Gardens.  
**Chester (C. & D.A.R.S.)** — Tuesdays, 7.45 p.m., Tarran Hut, Y.M.C.A.  
**Crosby** — Tuesdays, 8 p.m., over Gordon's Sweetshop, St. John's Road, Waterloo.  
**Lancaster (L. & D.A.R.S.)** — October 3, 7.30 p.m., George Hotel, Torrisholme.  
**Liverpool (L. & D.A.R.S.)** — Tuesdays, 8 p.m., Room "G," Wavertree Community Centre, Penny Lane, Liverpool, 18.  
**Manchester (M. & D.R.S.)** — October 1, 7.30 p.m., Brunswick Hotel, Piccadilly, Manchester. (S.M.R.C.) — Fridays, 7.45 p.m., Ladybarn House, Mauldeth Road, Manchester, 14.  
**Preston (P.A.R.S.)** — Wednesdays, 7.45 p.m., 48 High Street, off Lancaster Road, Preston.  
**Rochdale (R.R.T.S.)** — Fridays, 7.45 p.m., 1 Law Street, Sudden.  
**Southport** — Thursdays, 8 p.m., Sea Cadets Camp, Esplanade, Southport.  
**Stockport (S.R.S.)** — September 26, October 10, 24, 8 p.m., Blossoms Hotel, Buxton Road, Stockport.  
**Warrington (W.A.D.R.S.)** — September 20, October 4, 18, 7.30 p.m., King's Head Hotel, Winwick Street.  
**Wirral (W.A.R.S.)** — September 19, October 3, 17, 7.45 p.m., Y.M.C.A., Whetstone Lane, Birkenhead.

## REGION 2

**Barnsley** — September 28, Lecture, 7.30 p.m., King George Hotel.  
**Bradford** — September 25, 7.30 p.m., Cambridge House, 66 Little Horton Lane.  
**Doncaster** — October 2, 7.30 p.m., Y.W.C.A., Cleveland Street.  
**Gateshead** — Mondays, 7.30 p.m., Mechanics' Institute, 7 Whitehall Road.  
**Hull** — Second and last Tuesdays, 7.30 p.m., "Rampant Horse," Paisley Street.  
**Leeds** — Wednesdays, 7.30 p.m., 4 Woodhouse Square.  
**Newcastle** — October 2, 7.45 p.m., Liberal Club, Pilgrim Street.  
**Pontefract** — September 20, 8 p.m., Queen's Hotel, Tanshelf.  
**Rotherham** — Wednesdays, 7 p.m., Photographic Society's Club-room, "The Crofts," Moorgate.  
**Scarborough** — Thursdays, 7.30 p.m., B.R. Rifle Club, West Parade Rd.  
**Sheffield (S.A.R.C.)** — September 26, 8 p.m., Dog & Partridge, Trippett Lane.  
**Slough** — Fridays, 7.30 p.m., 3 Dartmouth Street.  
**South Shields (S.S. & D.R.C.)** — September 26, 7 p.m., Trinity House Social Centre.  
**Spennorth** — Summer Recess.  
**York** — Thursdays, 7.30 p.m., Club Rooms, Y.A.R.S., Fetter Lane.

## REGION 3

**Birmingham (South)** — October 5, 7.30 p.m., "A" Committee Room, Cadbury Bros., Bournville Lane. (M.A.R.S.) — September 18, 7 p.m., Midland Institute, (Slade) — September 14, 28, October 12, 7.45 p.m., Church House, High Street, Erdington.  
**Coventry** — September 28, 7.30 p.m., Priory High School, Wheatley Street, (C.A.R.S.) — September 17, October 1, 7.30 p.m., 9 Queen's Road. (Courtalds) — Wednesdays, 5-8.30 p.m., Courtalds, Ltd., Foleshill Road.  
**Malvern** — October 1, 8 p.m., "Foley Arms."  
**Redditch** — September 20, October 2, 8 p.m., "Scale and Compass," Birchfield Road.  
**Solihull** — September 17, October 1, 7.30 p.m., Defence H.Q., Sutton Lodge, Blossomfield Road.  
**Stoke** — September 26, 8 p.m., "Lion's Head," John Street, Hanley.  
**Stourbridge (S.A.R.S.)** — October 2, 8 p.m., King Edward VI School.  
**Walsall** — September 26, October 10, 8 p.m., Technical College, Bradford Place.  
**Wolverhampton** — September 24, October 8, 8 p.m., Nechell's Cottage, Stockwell End.

## REGION 4

**Alvaston** — Tuesdays, Thursdays, 7.30 p.m., Sundays, 10.30 a.m., Boulton Lane, Alvaston, Derby.  
**Chesterfield** — Tuesdays, 7.30 p.m., Bradbury Hall, Chatsworth Road.  
**Derby (D. & D.A.R.S.)** — Wednesdays, 7.30 p.m., Room 4, 119 Green Lane, Derby.  
**Ilkeston (I. & D.A.R.S.)** — Thursdays, 7 p.m., Room 5, Ilkeston College of Further Education, Field Road.  
**Leicester (L.R.S.)** — September 24, October 8, 7.30 p.m., 140 High Cross Street.  
**Lincoln (L.S.W.C.)** — No meeting in September.  
**Mansfield (M. & D.A.R.S.)** — No meeting in October.  
**Newark (N. & D.A.R.S.)** — October 7, 7 p.m., North Gate House, North Gate, Newark.  
**Northampton (N.S.W.C.)** — Fridays, 7 p.m., Club Room, 8 Duke Street.  
**Nottingham** — September 21, October 19, 7.30 p.m., Basford Hall Miners' Welfare, Nuthall Road, Cinderhill.  
**Peterborough** — October 3, 7.30 p.m., 21 Hankey Street.  
**Retford** — October 4, 7 p.m., Sun Inn, Cannon Square.  
**Chelmsford** — October 2, 7.30 p.m., Marconi College, Arbour Lane, Chelmsford.

**Stroud** — Wednesdays, 7.30 p.m., Subscription Rooms.

## REGION 7

**London (L.M.L.C.)** — September 21, October 19, 12.30 p.m., Bedford Corner Hotel, Bayley Street, Tottenham Court Road, W.C.1.  
**London (U.H.F. Group)** — October 4, 7.30 p.m., Bedford Corner Hotel.  
**Bexleyheath (N.K.R.S.)** — September 27 ("The Mini Beam," G4ZU), Upper Geddes Hall, October 11, 7.30 p.m., Congregational Hall, Chapel Road, Bexleyheath.  
**Finsbury Park** — September 18, October 23, 7.30 p.m., 164 Albion Road, N.16.  
**Guildford & Woking** — September 23, 3 p.m., Royal Arms Hotel, North Street, Guildford.  
**Ilford** — Thursdays, 8 p.m., G2BRH, 579 High Road.  
**Slough** — October 2, QTH from G2HOX, 13 Quaves Road, or G3GYD, 5 Parklands Avenue, Slough.  
**Southgate, Finchley & District** — October 11, 8 p.m., Arnos School, Wilmer Way, N.14.  
**Welwyn Garden City** — October 9, 7.30 p.m., "Red Lion," Hatfield. (Annual Dinner.)

## REGION 9

**Bath** — September 24, October 22, 7.30 p.m., R.N.V.W.R. H.Q., 12 Pierpoint Street.  
**Bristol** — September 21, October 19, 7.15 p.m., Carwardine's Restaurant, Baldwin Street.  
**Exeter** — October 5, 7 p.m., Y.M.C.A., St. David's Hill.  
**Falmouth (W.C.R.C.)** — Alternate Tuesdays, 7 p.m., Technical Institute, Falmouth.  
**North Devon** — October 4, G3BO, Rosebank, Westcombe, Bideford.  
**Plymouth** — September 18, October 2, 16, 7.30 p.m., Virginia House Settlement, Barbican.  
**Torquay** — September 15, October 20, 7.30 p.m., Y.M.C.A., Castle Road.  
**Weston-super-Mare** — October 10, 7.30 p.m., Sea Cadets Hall, Alfred Street.  
**Yeovil** — Wednesdays, 7.30 p.m., Grove House, Preston Road.

## REGION 10

**Cardiff** — October 8, 7.30 p.m., "The British Volunteer," The Hayes, Cardiff.  
**Neath & Port Talbot** — October 2, 7.30 p.m., Royal Dock Hotel, Briton Ferry.

## REGION 14

**Falkirk & Stirling** — September 28, 7.30 p.m., The Temperance Café, High Street, Falkirk.  
**Glasgow** — September 28, 7.15 p.m., Christian Institute, 70 Bothwell Street, Glasgow, C.2.

## REGION 15

**Belfast** — October 26, 8 p.m., Y.M.C.A. (Discussion on N.F.D.).

## Affiliated Societies

THE following are additions and alterations to the list of Affiliated Societies published in the October 1955 issue of the BULLETIN:—

**Army Wireless Reserve Amateur Radio Society**, c/o J. A. Bladon, 28 Jack Lane, Davenham, Northwich, Cheshire.  
**Baileul Radio Society**, 3 Training Battalion, R.E.M.E., Baileul Camp, Arborfield, Berks.  
**1366 (City of Chester) Squadron Air Training Corps Amateur Radio Club**, (G3KZK), Old Wrexham Road, Chester.

The Honorary Secretary of the Norwich & District Radio Society is now D. Youngs (G3JIE), 53 Salisbury Road, Thorpe Road, Norwich.

The Honorary Secretary of the R.A.F. Changi Amateur Radio Club is now B. Gauntlett, c/o S.C.S., R.A.F. Station Changi, Singapore 17.

The Honorary Secretary of the Wirral Amateur Radio Society is now L. I. Powell, 549 Woodchurch Road, Birkenhead.

## Representation

### County Durham

Mr. J. R. Tyzack (G3ELP), 101 Birchington Avenue, South Shields, has been appointed to the vacant office of Durham County Representative.

### West Hartlepool

Mr. L. Foden has given notice that he wishes to resign as T.R. for West Hartlepool with effect from November 15, 1956. Nominations for his successor should be sent to reach Headquarters by not later than October 31, 1956.

### Lincolnshire

Mr. L. J. Coupland (G2BQC) has resigned as C.R. for Lincolnshire. Nominations for his successor should be sent to reach the General Secretary by not later than October 31, 1956.

### Change of Address

The address of Mr. E. Smith (T.R. for South Shields) is now 151 Cheviot Road.

# R.A.E.N. Rally 1956

## Rules

1. The Rally is open to all R.A.E.N. members, who will be divided into three groups:—

- Out stations (R.A.E.N. members operating portable or mobile);
- Fixed stations (R.A.E.N. members operating from home stations);
- Receiving stations (R.A.E.N. members operating as receiving stations at home or as outstations).

2. The Rally will take place on Sunday, October 21, 1956, from 0900 to 1200 G.M.T., 1400 to 1700 G.M.T. (telephony) and from 1800 to 2100 G.M.T. (Morse code A1). Operation will be in the 1.8, 3.5, 28, and 144 Mc/s bands. R.S.G.B. band planning must be observed. Licensed power must not be exceeded.

3. Outstation equipment will not be connected in any way to public mains electricity supply and must be located at least one mile from home, or other normal fixed station site.

## 4. Scoring—Transmitting Sections.

Contacts will score points as follows:—

- Outstation to outstation—5 points.
- Outstation to fixed station—3 points.
- Outstation to non-R.A.E.N. Station—1 point.

- Fixed station to outstation—3 points.
- Fixed station to fixed station—2 points.
- Fixed station to non-R.A.E.N. Station—1 point.

Ten scoring contacts only will be allowed with non-R.A.E.N. stations during the rally.

No station may be worked more than once on each band by the same mode of sending. (G3XXX, G3XXX/P and G3XXX/M count as one station for scoring purposes.)

The best two periods' scores will be counted for placing.

5. Each participant will, on application to his E.C.O. (or the Honorary Secretary, R.A.E.N. Committee in cases where participants have no E.C.O.) be issued with a test phrase. This test phrase will be passed to the first R.A.E.N. station contacted, in exchange for the test phrase from that station. The test phrase received will be passed to the next R.A.E.N. station contacted, in exchange again, and so on. No test phrase will be passed to non-R.A.E.N. stations. E.C.O.s should make application for block issues of test phrases to the Honorary Secretary, R.A.E.N. Committee, by not later than October 12, 1956.

6. Stations will call "CQ RAEN from R.A.E.N. Station . . . ." and sign "from R.A.E.N. station. . . ."

7. Printed log sheets will be issued at the same time as the test phrases, by the Honorary Secretary, R.A.E.N. Committee, to all participants through E.C.O.s in cases where there is an E.C.O.

Completed entries for all the periods worked, must be returned to the Honorary Secretary, R.A.E.N. Committee, postmarked not later than Monday, November 12, 1956. Location and signal reports must be given, received and logged.

Participants should complete, on the top sheet of their log, the details of their station, in the appropriate spaces provided. The declaration must be signed.

## 8. Receiving Stations—Scoring and Logs.

Receiving stations will score three points per R.A.E.N. Station heard in contact, provided that the details required by the printed log sheet are correctly recorded therein.

Receiving stations operating portable or mobile will receive a bonus of one point per R.A.E.N. station correctly logged.

Logs must be submitted on printed sheets obtained from the Honorary Secretary, R.A.E.N. Committee through E.C.O.s, or direct where participants have no E.C.O. The details and declaration required should be completed and signed on the top sheet only.

Entries should be posted to reach the Honorary Secretary, R.A.E.N. Committee and should be postmarked not later than Monday, November 12, 1956.

9. Awards will be made to the participants who score the highest number of points in each of the groups:—Outstations, Fixed Stations and Receiving Stations.

Slow Morse transmissions are organized by Mr. C. H. L. Edwards (G8TL), 28 Morgan Crescent, Theydon Bois, Essex. Members using the service are requested to send listener-reports to the stations concerned.

## Can You Help?

● A. S. Bragg (B.R.S.11262), 118 Wallace Road, Ipswich, Suffolk, who wishes to borrow the manual for Hallicrafters S27U receiver (27.8 to 143 Mc/s)?

● R. J. Farren (B.R.S.20804), Wilcocks Cottage, Cowfold, Horsham, Sussex, who wishes to borrow the manual for the R.C.A. AR88D receiver?

● A. McGhie (GM3AUE), Rosedale, Isle of Wight, Wigtownshire, who urgently requires the circuit diagram and any other details of the Communications Receiver type RL75?

● A. Parker (G3KH), 133 Station Road, Cropston, Leicester, who urgently requires a pair of new or secondhand 35T valves? All enquiries have so far failed to locate a source of supply.

## City and Guilds Broadsheet

CITY and Guilds of London Institute is now publishing a periodical *Broadsheet* which reports the Institute's many activities.

## NOW AVAILABLE

### "CERTIFICATES AND AWARDS"

This new R.S.G.B. Publication lists all major operating awards and includes check lists for Empire DX, DX Century Club, Worked All Zones, and many other well-known certificates.

PRICE 2/6 (By Post 2/10)

R.S.G.B. SALES DEPARTMENT

NEW RUSKIN HOUSE,

LITTLE RUSSELL STREET, LONDON W.C.1

#### Uganda Broadcasting Service

RECEPTION reports on the Uganda Broadcasting Service's transmissions on 5026 and 7110 kc/s will be welcomed by R. J. Davey (G3CIU), Chief Engineer, P.O. Box 142, Kampala.

### North Eastern Scotland Regional Meeting

SATURDAY, SEPTEMBER 29, 1956  
IMPERIAL HOTEL,  
STIRLING STREET, ABERDEEN

#### Programme

Assemble	-	-	-	-	2 p.m.
Business Meeting	-	-	-	-	2.30 p.m.
Tea	-	-	-	-	4 p.m.
Lecture "The Antennamatch"	-	-	-	-	
by Frank Hicks-Arnold, G6MB	-	-	-	-	4.30 p.m.
Dinner	-	-	-	-	7.30 p.m.

Tickets price 15/- can be obtained on application to the Region 12 Representative, Mr. Len Hardie, GM2FHH, 91 Inchbrae Drive, Aberdeen, or other local representatives. Last date for applications September 25, 1956.

Messrs. K. E. S. Ellis, G5KW, and J. Taylor, GM2DBX, will represent the Council at the Business Meeting.

## Silent Keys

DEREK BOLTON (G3DVB)

We much regret to record the death of Derek Bolton (G3DVB) as a result of a road accident in East Africa where he was working for his employers, The Automatic Telephone & Electric Co., Ltd. Derek was a leading personality amongst Merseyside radio amateurs and his loss will leave a gap difficult to fill. He was for many years President and Chairman of the Merseyside Radio Society and at one time Town Representative for Liverpool.

Our sympathy is extended to his parents and his fiancée, who is the sister of G3GST, G2AMV.

LEONARD FRYER (GM2FR)

With sorrow we record the death, following a motor accident on August 13, 1956, of Mr. Leonard Fryer, GM2FR, of Cupar, Fife.

Len Fryer will be especially remembered by pre-war members as author of the monthly feature "Contemporary Literature."

He had been a member for 24 years up to the time of his death. Deepest sympathies are extended to Mrs. Fryer and to her family.

JOHAN LAGERCRANTZ (SMSSV)

We deeply regret to record the death, following a motor accident on August 18, 1956, of Johan Lagercrantz of Stockholm.

Educated in England, Johan spoke and wrote perfect English. He had travelled widely in Europe and the United States where he had extensive business connections, particularly in the commercial v.h.f. communications field in which the firm which bore his name specialized.

He was an acknowledged expert in and a great enthusiast for all things radio, and although in recent years his call was not often heard due to the demands of his ever-growing business, he was well known in the amateur movement in Sweden.

In Johan's untimely death, those who were privileged to know him well have lost a true and staunch friend. We offer our condolences to his wife and children and to his parents, G2UJ.

W. T. REES (GW3CR)

It is with regret that we record the death of Mr. W. T. Rees (GW3CR) of Giffach Goch, Glamorgan. Bill, who was active on all bands until going into hospital a few months ago, will be missed by members in the Rhondda area and remembered by them for his unassuming manner and readiness to help.

During the 1914-18 war he served in the Wireless Section of the Royal Flying Corps at the same time as the General Secretary. He was also on war service during 1939-45.

Our sympathies are extended to his wife and family on the passing of a grand old-timer. GW2FOF.

### South Western Regional Meeting

SUNDAY, OCTOBER 7, 1956  
OSWALD'S HOTEL  
BABBACOMBE, TORQUAY

#### Programme

Assemble	-	-	-	-	11 a.m.
Lunch	-	-	-	-	1 p.m.
Business Meeting	-	-	-	-	2.30 p.m.
Tea	-	-	-	-	5 p.m.

Tickets 12/6 each from L. Mays (G2CWR), 320 Torquay Road, Preston, Paignton, and W. H. Baker (G3JD), 46 Dower Road, Torquay.

The Immediate Past President (Mr. H. A. Bartlett, G5QA), the Penultimate Past President (Mr. A. O. Milne, G2MI), the Zonal Representative (Mr. R. G. Lane, G2BYA) and the General Secretary will be in attendance.

# Letters to the Editor...

## QWU and Contests

DEAR SIR,—As one engaged professionally in developing u.h.f. and s.h.f. equipment I derive the most pleasure and relaxation from Amateur Radio by operating on the near d.c. bands, chasing DX and entering contests.

In connection with the latter I should like to raise two points. Firstly, I consider J. H.'s *Current Comment* in the June BULLETIN as an invitation to the fellow who hopes to win the contest to cut his own throat. "QWU" sent to a station already worked in your own log, does not necessarily mean that you are entered in his log as worked. He may have misread or miswritten your call-sign, or he may not have heard you give an acknowledgment on his last "over." If you send QWU you must also send time to make it mean anything, so which takes the less time "G5UM de G2HPF QWU 2135 G.M.T. BK." or "G5UM de G2HPF 579043 BK?"

Obviously the latter even if you omit the G.M.T., so what time have you saved? In cases where you are called by a station already worked it is, therefore, quicker to work him again and claim only one point for the two contacts.

My second point is could not all societies organizing contests send a full list of results to competitors? A nominal charge of two I.R.C.s should cover any expense involved.

Yours faithfully,

HARRY LOWE (G2HPF).

(Town Representative)

Chelmsford, Essex.

## From Oscillator Stability to Brass-pounding

DEAR SIR,—Dr. Koster's article on a converter for a broadcast set raises a point that also occurs with v.h.f. reception, but for a different reason. To hold a c.w. note steady at v.h.f. requires a high degree of stability in the various oscillators. This snag, and the lack of a b.f.o. in Dr. Koster's design can easily be overcome by simply modulating the local oscillator in any of the usual ways with the desired audio note. If a separate oscillator is not convenient, feeding the oscillator with unsmoothed h.t. will at least enable the signals to be read, but they will of course be T1 all the time!

And may I now cross swords with Mr. Evans (GW8WJ) on the subject of brass-pounding? As one who has a healthy dislike for c.w., except in dire necessity, I must admit to not possessing a key jack in any transmitter except my 2m and 70cm ones. Although a "young stager" by Mr. Evans's lights, I am one of those who believes in using the band and system most convenient for the object in hand—which is usually to harangue the unsuspecting contact on the subject of TV. This I cannot and will not do on c.w. and if 160m is not satisfactory, I use 2m or 80m as the case may be. I am afraid that I do not feel that I am in the wrong, in spite of Mr. Evans—but then I use duplex, or even triplex, to save time, so I am doubly, or even trebly damned!

Yours faithfully,

Great Baddow, Essex.

M. BARLOW (G3CVO).

## N.F.D. Results

DEAR SIR,—Having complained by correspondence at the late publication of N.F.D. results last year (1955) may I hasten to congratulate all concerned in the prompt announcement of leading stations in this year's (1956) N.F.D. (August BULLETIN, page 80).

Please convey to the Contest Committee my personal appreciation for what is indeed a noble effort.

Well done R.S.G.B. and voluntary helpers.

Yours faithfully,

South Norwood, London.

DAVID DEACON (G3BCM).

**Our aim is to double  
the membership**

**Mobile Converter.**—What is believed to be the first British-made mobile converter covering all amateur bands from 3.5 to 28 Mc/s has just been announced by the Minimeter Company. Each band is spread over practically the whole of the full vision slide rule type dial. The complete unit, which measures only 8in. by 7in. by 6½in., weighs 4 lb and is finished in silver-grey hammer finish with black fittings. The converter has a built-in power supply for home station use and requires only 150-200 volts at 15 mA and 6.3 volts at 0.6 amp for mobile. Models are available for use with receivers tuning to either 1.5 or 6 Mc/s. A descriptive leaflet is available from the Company at 37 Dollis Hill Avenue, London, N.W.2.

**Component Catalogue.**—Southern Radio and Electrical Supplies, Sorad Works, Redlynch, near Salisbury, have issued a new illustrated 54-page catalogue (No. 10) giving information on a wide range of equipment, components, tools and test gear for the radio amateur and constructor. The catalogue also contains a useful list of Amateur Radio prefixes and Zones. Copies may be obtained by post, price 6d. each.

**Signal Shifter.**—The work involved in building an all-band transmitter can be greatly reduced by incorporating a Geloso Signal Shifter, an Italian-made unit comprising a Clapp v.f.o. and multiplier stages giving output on 3.5, 7, 14, 21 and 28 Mc/s. Two models are available, one to drive a single 807, the other to drive a pair of 807s or similar valves in parallel. Details of this and other Geloso equipment can be obtained from K.W. Electronics, Ltd., 136 Birchwood Road, Wilmington, Dartford, Kent.

**Triode Valves for Microwave Links.**—Mullard, Ltd., are now manufacturing triodes for use at frequencies up to 4000 Mc/s. These new valves, the EC56 and EC57, are of disc-seal construction and are distinguished by embodying dispenser cathodes. Apart from giving large emission current densities, this permits precision grinding of cathode surfaces and the employment of very small inter-electrode clearances. A useful result is that the valves generate very little electrical noise and can therefore be used to advantage in sensitive receivers.

**New Valve for U.H.F. Mobile Use.**—The QQV02-6 is a new Mullard miniature double tetrode power amplifier on a B9A base which will function efficiently up to 500 Mc/s. It has a mutual conductance of 7 mA/V per section and delivers 3.5 watts output when operated at maximum ratings with anode and screen modulation. The centre-tapped heater can be operated from either 12.6 or 6.3 volts; the h.t. needed is only 180 volts.

**Flying Lead Valve Assemblies for Chassis Mounting.**—Brimar are now producing a range of flying-lead valves assembled on moulded bases suitable for chassis mounting and using the same fixing holes as the corresponding valveholders for plug-in valves. Both screened and unscreened types are available with the bases moulded in either nylon-loaded P.F. or in P.T.F.E.

**Polyurethane Foam.**—"Stick-a-fix" self-adhesive polyurethane foam, originally used as a draught and dust excluder in the domestic field, is being produced in thicknesses and widths suitable for the mounting of radio and electronic components such as speakers, escutcheons and cathode ray tubes. It is claimed that as the material is inorganic it is insect and bacteria resistant and unaffected by light. Details may be obtained from Sealdraught, Ltd., Chandos House, Buckingham Gate, London, S.W.1.

**Home Entertainment Equipment.**—The Grundig "Balmoral" radiogram, which uses five loudspeakers, covers long, medium and short waves as well as Band II f.m. broadcasting in addition to being a three-speed auto-change record player. Philco are manufacturing an all-transistor record player which plays 1500 45 r.p.m. record sides on only four U2 torch batteries. The unit can also be used as a baby alarm and Morse practice set.

## Morse Code operating . . .

The essential qualification of a Radio Officer at sea, in the air or ashore is **EXPERT MORSE OPERATING**. The Candler method of teaching Code either from "scratch" or to get over that 20 w.p.m. "hump" to the classic 30 or more w.p.m., is known the world over. Thousands of Radio Officers owe their present high position of responsibility to their diligent study of the Walter H. Candler System of Morse Training.

45 years of teaching Morse Code is proof of the efficiency of this system.

## . . . as a PROFESSION

Careful thought is given by our Instructional Staff to individual problems, and provided you study diligently and follow our advice success in reaching the qualification you desire is assured — we guarantee this or refund your fees.

Morse Key and Buzzer Sets of good quality on polished wood base, 15/- to Candler students only.

The Press carries an ever increasing number of advertisements of positions vacant at good salaries for competent Operators.

Send 2½d. stamp for Payment Plans and Full Details of all Courses.

## BENDIX COMMUNICATIONS RECEIVER TYPE RA-10DB

A superb 8 valve 4 band receiver covering 150-400 kc/s, 400-1100 kc/s, 2-5 Mc/s, and 5-10 Mc/s. Valve line up 6SK7 R/F, 6K8 F/C, Two 6SK7IF Amplifiers, 6E7 Second Det AVC and AF Amplifier, 6C5 BFO, 6K6 OP, 6H6 Sig. limiter diode.

Power supply 28V, d.c. 2A, to internal motor generator. If desired this can easily be changed to a similar generator with either 6 or 12V. input. Alternatively the generator may be removed and the space utilised for a converter. A circuit for a.c. mains conversion is available.

As a BOAT, TRUCK, CARAVAN or CAR RECEIVER it is UNEQUALLED in value; converted to a.c. operation for fixed station it equals receivers selling for over five times the price we ask.

Full technical details, servicing data and circuit are supplied with every receiver.

PRICE **£5.10.0**

Packing and Carriage 10/-

## TYPE 62A INDICATORS

Ideal for conversion to oscilloscopes, T.V. units, etc. Containing V.C.R.97, 12 VR.91 (EF.50), 2 VR.54 (EB.34), 3 VR.92 (EF.50), 4 CV.118 (SP.61). Slow-motion dial, 13 Pots and scores of useful components. Size: 8½" x 11¼" x 18". In wooden packing case.

PRICE: **£3.0.0** Carriage 7/6.

## AN/APN.1 TRANSDUCER

This unit consists of Magnet, and Coil which is attached to an aluminium diaphragm suspended freely and perforated to prevent air damping. Mounted on a Ceramic cover which sits over the diaphragm is a form of 2-Gang capacitor which has a swing from 10-50 pF.

The above unit is used as part of Wobulator described on page 252 of the June "Wireless World."

PRICE 7/6 p.p.

## R.F. UNITS

R.F.24 20-30 Mc/s. Switched Tuning. Valved. 9/6 each.

R.F.25 40-50 Mc/s. Switched Tuning: Valved. 9/6 each.

Packing and postage 3/- each.

## COMMAND TRANSMITTERS

BC-45B-A 5.3-7 Mc/s., BC-45A-A 7-9.1 Mc/s. .. Price **£2** each.  
Fully Valved—Less Dynamotors (Not New). Plus 3/- p.p.

BENDIX I.F. Transformers. 1.63 Mc/s complete in cans, set of two new and boxed, Size 2 x 1½ x 3¼in., 5/-, p.p. 1/6.

BENDIX Potted Audio Output Transformer complete with integral smoothing choke. Ratings 4½ watt 9,000 ohm Primary. 600 and 4,000 ohm Secondary. Size: 4 x 1¼ x 2in. New and boxed, 4/6, p.p. 1/6.

NOTE: Carriage prices quoted apply only to England and Wales.

## The Walk-around Shop

### 2 METRE RECEIVER Type R1392

Air Tested 15 Valve Superhet

Frequency 95-150 Mc/s (2 to 3 metres)

Valve line up: 1st and 2nd R.F. Amp VR.136 (EF.54), 1st Local Oscillator VR.65 (SP.61), 2 Oscillator Multipliers VR.136 (EF.54), 3 I.F. Amp VR.53 (EF.39), A.G.C. 6Q7, Output 6J5, Muting VR.92 (EA.50), Noise Limiter VR.92 (EA.50), B.F.O. 6J7, Mixer VR.136 (EF.54), De Mod. 6Q7. Slow motion Tuning over 95-150 Mc/s or can be Crystal controlled. Power supply required: 240-250 volts at 80 mA 6.3 volts at 4 amps.

Size 19" x 10" x 10" Standard Rack Mounting.

£6.19.6. Complete with valves and circuit diagram, checked and Air Tested, Packing and postage 17/6, 10/- returnable on packing case.

POWER PACK Type 234 for use with R1392. £4.10.0.

### I.F. AMPLIFIER UNIT (Right)

460 kc/s with IT4, Brand New and Boxed.

Fully Screened in plug-in Box, Size 2½" x 1" x 4½". Price with circuit, 10/- each. Plus 1/- p.p.

### 2-3mA MEASUREMENT METER

2-3 mA movements in metal case measuring 4½" high, 3½" wide and 5" deep .. 7/6

Plus 2/- p.p.

### RECEIVER UNIT Ex 1143A

Suitable for conversion to 2 metres or F.M. Wrotham transmissions. Valve line-up: (4) EF50, (1) EL32, (2) EF39.

(1) EBC33, (1) EA50, Supplied with circuit diagrams, Fully valved 35/- each.

Plus 3/- p.p.

### MINIATURE I.F. STRIPS

Size 10½" x 2½" x 3" frequency

9.72 Mc/s, 2 EF.92s and 1 EF.91

I.F. Amps, EB.91 Det/AGC.

EF.91 AGC Amp, and EF.91

Limiter. Circuit supplied.

Price: (Less valves) 8/- each

post paid.

HEADPHONES. Super sensitive 4,000 ohm Balanced Armature. Brand New and Boxed. 21/- plus 2/6 p.p.

A.P.Q.2 RADAR JAMMING UNIT. Containing 931A Photo Multiplier Cell complete with resistance network and lightproof box. Wide band Amplifier (2) 6AC7, (2) 6AG7, (2) 388A. This unit is similar to the A.P.Q.9. Jamming Unit shown in the October issue of *Wireless World*, Brand New. £5.0.0. plus 10/- carr.

EARPHONES. Balanced Armature L/R, New and Boxed (single units), price 3/6, plus 6d. p.p.

EARPHONES. C.H.R. High Resistance, New and Boxed (single units), price 3/6, plus 6d. p.p.

R.C.A. SPEAKER for outside use, 20 watt 15 ohm with internal Multitapped transformer in strong metal case measuring 10in. dia. x 5in. deep. Brand new in original packing. £2.10.0., plus 7/6 carr.

### VIBRATOR PACKS (Mallory)

12V Input 150V 40 mA Size 5½" x 5½" x 3" .. Price 17/6 each.

12V Input 275V 80 mA Size 5½" x 5½" x 3" .. Price 25/- each.

6V Input 275V 80 mA Size 4½" x 6" x 4½" .. Price 35/- each.

with harness. All Plus 2/6 p.p.

# FOR SURE SOLDERING WITH LESS TROUBLE USE Ersin Multicore Solder

Good joints are essential to good reception and you get good joints when you use Ersin Multicore Solder. Incorporated in the solder wire are 5 cores of Ersin Flux, a very fast, activated rosin which cleans oxides from the surfaces to be soldered as soon as heat is applied. It also prevents further oxidation until the molten solder has fused with the metal to form a sound electrical connection. Get a carton of Ersin Multicore Solder today and see for yourself how easy to use it is.

SIZE 1 CARTON 5/- RETAIL

## Bib WIRE STRIPPER AND CUTTER

Strips insulation without nicking the wire, cuts wire cleanly and splits extruded flex. Adjustable to most thicknesses. Nickel plated and in cartons with full instructions. **RETAIL 3/6**

## MULTICORE SOLDERS LTD.

Cabinets, Genuine AR88 35/-, plus 5/- carriage.

Avo Valve Testers £7.10.0.

Valves: 6B8, 6B8C, 6B8D, 6B8E, 6B8F, 6B8G, 6B8H, 6B8J, 6B8K, 6B8L, 6B8M, 6B8N, 6B8P, 6B8Q, 6B8R, 6B8S, 6B8T, 6B8U, 6B8V, 6B8W, 6B8X, 6B8Y, 6B8Z, 6B8AA, 6B8AB, 6B8AC, 6B8AD, 6B8AE, 6B8AF, 6B8AG, 6B8AH, 6B8AI, 6B8AJ, 6B8AK, 6B8AL, 6B8AM, 6B8AN, 6B8AO, 6B8AP, 6B8AQ, 6B8AR, 6B8AS, 6B8AT, 6B8AU, 6B8AV, 6B8AW, 6B8AX, 6B8AY, 6B8AZ, 6B8BA, 6B8BB, 6B8BC, 6B8BD, 6B8BE, 6B8BF, 6B8BG, 6B8BH, 6B8BI, 6B8BJ, 6B8BK, 6B8BL, 6B8BM, 6B8BN, 6B8BO, 6B8BP, 6B8BQ, 6B8BR, 6B8BS, 6B8BT, 6B8BU, 6B8BV, 6B8BW, 6B8BX, 6B8BY, 6B8BZ, 6B8CA, 6B8CB, 6B8CC, 6B8CD, 6B8CE, 6B8CF, 6B8CG, 6B8CH, 6B8CI, 6B8CJ, 6B8CK, 6B8CL, 6B8CM, 6B8CN, 6B8CO, 6B8CP, 6B8CQ, 6B8CR, 6B8CS, 6B8CT, 6B8CU, 6B8CV, 6B8CW, 6B8CX, 6B8CY, 6B8CZ, 6B8DA, 6B8DB, 6B8DC, 6B8DD, 6B8DE, 6B8DF, 6B8DG, 6B8DH, 6B8DI, 6B8DJ, 6B8DK, 6B8DL, 6B8DM, 6B8DN, 6B8DO, 6B8DP, 6B8DQ, 6B8DR, 6B8DS, 6B8DT, 6B8DU, 6B8DV, 6B8DW, 6B8DX, 6B8DY, 6B8DZ, 6B8EA, 6B8EB, 6B8EC, 6B8ED, 6B8EE, 6B8EF, 6B8EG, 6B8EH, 6B8EI, 6B8EJ, 6B8EK, 6B8EL, 6B8EM, 6B8EN, 6B8EO, 6B8EP, 6B8EQ, 6B8ER, 6B8ES, 6B8ET, 6B8EU, 6B8EV, 6B8EW, 6B8EX, 6B8EY, 6B8EZ, 6B8FA, 6B8FB, 6B8FC, 6B8FD, 6B8FE, 6B8FF, 6B8FG, 6B8FH, 6B8FI, 6B8FJ, 6B8FK, 6B8FL, 6B8FM, 6B8FN, 6B8FO, 6B8FP, 6B8FQ, 6B8FR, 6B8FS, 6B8FT, 6B8FU, 6B8FV, 6B8FW, 6B8FX, 6B8FY, 6B8FZ, 6B8GA, 6B8GB, 6B8GC, 6B8GD, 6B8GE, 6B8GF, 6B8GG, 6B8GH, 6B8GI, 6B8GJ, 6B8GK, 6B8GL, 6B8GM, 6B8GN, 6B8GO, 6B8GP, 6B8GQ, 6B8GR, 6B8GS, 6B8GT, 6B8GU, 6B8GV, 6B8GW, 6B8GX, 6B8GY, 6B8GZ, 6B8HA, 6B8HB, 6B8HC, 6B8HD, 6B8HE, 6B8HF, 6B8HG, 6B8HH, 6B8HI, 6B8HJ, 6B8HK, 6B8HL, 6B8HM, 6B8HN, 6B8HO, 6B8HP, 6B8HQ, 6B8HR, 6B8HS, 6B8HT, 6B8HU, 6B8HV, 6B8HW, 6B8HX, 6B8HY, 6B8HZ, 6B8IA, 6B8IB, 6B8IC, 6B8ID, 6B8IE, 6B8IF, 6B8IG, 6B8IH, 6B8II, 6B8IJ, 6B8IK, 6B8IL, 6B8IM, 6B8IN, 6B8IO, 6B8IP, 6B8IQ, 6B8IR, 6B8IS, 6B8IT, 6B8IU, 6B8IV, 6B8IW, 6B8IX, 6B8IY, 6B8IZ, 6B8JA, 6B8JB, 6B8JC, 6B8JD, 6B8JE, 6B8JF, 6B8JG, 6B8JH, 6B8JI, 6B8JJ, 6B8JK, 6B8JL, 6B8JM, 6B8JN, 6B8JO, 6B8JP, 6B8JQ, 6B8JR, 6B8JS, 6B8JT, 6B8JU, 6B8JV, 6B8JW, 6B8JX, 6B8JY, 6B8JZ, 6B8KA, 6B8KB, 6B8KC, 6B8KD, 6B8KE, 6B8KF, 6B8KG, 6B8KH, 6B8KI, 6B8KJ, 6B8KK, 6B8KL, 6B8KM, 6B8KN, 6B8KO, 6B8KP, 6B8KQ, 6B8KR, 6B8KS, 6B8KT, 6B8KU, 6B8KV, 6B8KW, 6B8KX, 6B8KY, 6B8KZ, 6B8LA, 6B8LB, 6B8LC, 6B8LD, 6B8LE, 6B8LF, 6B8LG, 6B8LH, 6B8LI, 6B8LJ, 6B8LK, 6B8LL, 6B8LM, 6B8LN, 6B8LO, 6B8LP, 6B8LQ, 6B8LR, 6B8LS, 6B8LT, 6B8LU, 6B8LV, 6B8LW, 6B8LX, 6B8LY, 6B8LZ, 6B8MA, 6B8MB, 6B8MC, 6B8MD, 6B8ME, 6B8MF, 6B8MG, 6B8MH, 6B8MI, 6B8MJ, 6B8MK, 6B8ML, 6B8MM, 6B8MN, 6B8MO, 6B8MP, 6B8MQ, 6B8MR, 6B8MS, 6B8MT, 6B8MU, 6B8MV, 6B8MW, 6B8MX, 6B8MY, 6B8MZ, 6B8NA, 6B8NB, 6B8NC, 6B8ND, 6B8NE, 6B8NF, 6B8NG, 6B8NH, 6B8NI, 6B8NJ, 6B8NK, 6B8NL, 6B8NM, 6B8NN, 6B8NO, 6B8NP, 6B8NQ, 6B8NR, 6B8NS, 6B8NT, 6B8NU, 6B8NV, 6B8NW, 6B8NX, 6B8NY, 6B8NZ, 6B8OA, 6B8OB, 6B8OC, 6B8OD, 6B8OE, 6B8OF, 6B8OG, 6B8OH, 6B8OI, 6B8OJ, 6B8OK, 6B8OL, 6B8OM, 6B8ON, 6B8OO, 6B8OP, 6B8OQ, 6B8OR, 6B8OS, 6B8OT, 6B8OU, 6B8OV, 6B8OW, 6B8OX, 6B8OY, 6B8OZ, 6B8PA, 6B8PB, 6B8PC, 6B8PD, 6B8PE, 6B8PF, 6B8PG, 6B8PH, 6B8PI, 6B8PJ, 6B8PK, 6B8PL, 6B8PM, 6B8PN, 6B8PO, 6B8PP, 6B8PQ, 6B8PR, 6B8PS, 6B8PT, 6B8PU, 6B8PV, 6B8PW, 6B8PX, 6B8PY, 6B8PZ, 6B8QA, 6B8QB, 6B8QC, 6B8QD, 6B8QE, 6B8QF, 6B8QG, 6B8QH, 6B8QI, 6B8QJ, 6B8QK, 6B8QL, 6B8QM, 6B8QN, 6B8QO, 6B8QP, 6B8QQ, 6B8QR, 6B8QS, 6B8QT, 6B8QU, 6B8QV, 6B8QW, 6B8QX, 6B8QY, 6B8QZ, 6B8RA, 6B8RB, 6B8RC, 6B8RD, 6B8RE, 6B8RF, 6B8RG, 6B8RH, 6B8RI, 6B8RJ, 6B8RK, 6B8RL, 6B8RM, 6B8RN, 6B8RO, 6B8RP, 6B8RQ, 6B8RR, 6B8RS, 6B8RT, 6B8RU, 6B8RV, 6B8RW, 6B8RX, 6B8RY, 6B8RZ, 6B8SA, 6B8SB, 6B8SC, 6B8SD, 6B8SE, 6B8SF, 6B8SG, 6B8SH, 6B8SI, 6B8SJ, 6B8SK, 6B8SL, 6B8SM, 6B8SN, 6B8SO, 6B8SP, 6B8SQ, 6B8SR, 6B8SS, 6B8ST, 6B8SU, 6B8SV, 6B8SW, 6B8SX, 6B8SY, 6B8SZ, 6B8TA, 6B8TB, 6B8TC, 6B8TD, 6B8TE, 6B8TF, 6B8TG, 6B8TH, 6B8TI, 6B8TJ, 6B8TK, 6B8TL, 6B8TM, 6B8TN, 6B8TO, 6B8TP, 6B8TQ, 6B8TR, 6B8TS, 6B8TT, 6B8TU, 6B8TV, 6B8TW, 6B8TX, 6B8TY, 6B8TZ, 6B8UA, 6B8UB, 6B8UC, 6B8UD, 6B8UE, 6B8UF, 6B8UG, 6B8UH, 6B8UI, 6B8UJ, 6B8UK, 6B8UL, 6B8UM, 6B8UN, 6B8UO, 6B8UP, 6B8UQ, 6B8UR, 6B8US, 6B8UT, 6B8UU, 6B8UV, 6B8UW, 6B8UX, 6B8UY, 6B8UZ, 6B8VA, 6B8VB, 6B8VC, 6B8VD, 6B8VE, 6B8VF, 6B8VG, 6B8VH, 6B8VI, 6B8VJ, 6B8VK, 6B8VL, 6B8VM, 6B8VN, 6B8VO, 6B8VP, 6B8VQ, 6B8VR, 6B8VS, 6B8VT, 6B8VU, 6B8VV, 6B8VW, 6B8VX, 6B8VY, 6B8VZ, 6B8WA, 6B8WB, 6B8WC, 6B8WD, 6B8WE, 6B8WF, 6B8WG, 6B8WH, 6B8WI, 6B8WJ, 6B8WK, 6B8WL, 6B8WM, 6B8WN, 6B8WO, 6B8WP, 6B8WQ, 6B8WR, 6B8WS, 6B8WT, 6B8WU, 6B8WV, 6B8WW, 6B8WX, 6B8WY, 6B8WZ, 6B8XA, 6B8XB, 6B8XC, 6B8XD, 6B8XE, 6B8XF, 6B8XG, 6B8XH, 6B8XI, 6B8XJ, 6B8XK, 6B8XL, 6B8XM, 6B8XN, 6B8XO, 6B8XP, 6B8XQ, 6B8XR, 6B8XS, 6B8XT, 6B8XU, 6B8XV, 6B8XW, 6B8XX, 6B8XY, 6B8XZ, 6B8YA, 6B8YB, 6B8YC, 6B8YD, 6B8YE, 6B8YF, 6B8YG, 6B8YH, 6B8YI, 6B8YJ, 6B8YK, 6B8YL, 6B8YM, 6B8YN, 6B8YO, 6B8YP, 6B8YQ, 6B8YR, 6B8YS, 6B8YT, 6B8YU, 6B8YV, 6B8YW, 6B8YX, 6B8YY, 6B8YZ, 6B8ZA, 6B8ZB, 6B8ZC, 6B8ZD, 6B8ZE, 6B8ZF, 6B8ZG, 6B8ZH, 6B8ZI, 6B8ZJ, 6B8ZK, 6B8ZL, 6B8ZM, 6B8ZN, 6B8ZO, 6B8ZP, 6B8ZQ, 6B8ZR, 6B8ZS, 6B8ZT, 6B8ZU, 6B8ZV, 6B8ZW, 6B8ZX, 6B8ZY, 6B8ZZ.

Wanted: Test Equipment, BC221's AR88 Receivers. Quantities of Valves, Communication Receivers.

All orders over £5 0. 0. Carriage paid.

Telephone: 20951.

## RELIABLE SURPLUS VALVES

Final Price Reductions

12H6, 1/-; EB34, 9004, 1/9; 2C26, EC31, 2/6; 6SK7GT, KTZ63, 3/9; KTZ41, D77, 4/3; 6J7, 4/9; 6Q7GT, 6/9; 80, 7/6; KT33C, 8/-.

The following are in makers' cartons: VU111, 2/3; 6H6, 2/9; 954, 3/-; 6SK7, 3/9; 6SH7, 6K6GT, 4/9.

Special offer of 6 valves, 1 each 6SK7, 6SH7, 6K6GT, 80, EB34 and 12H6 for 13/9 plus 1/6 p. and p.

VCR 97 Cathode Ray Tubes with socket. Full picture, 35/- slight restriction (outside mask limits), 17/6; Cut off, suitable for oscilloscope, 12/6. Carriage 2/6 extra. Bargain assortment of 1 to 5 watt resistors, 25 for 5/-.

Midget Ceramic Condensers, 1, 2, 3, 4.7, 7.5, 10, 15, 22, 27, 33, 39, 47, 56, 75, 100, 150, 220, 270, 330, 390, 470, 680, 1000, 1500, 2000, 3000pF, 8d. each, 7/6 doz. 5000, 10000pF, 10d. each, 9/6 doz.

Please allow for Postage on orders less than £1-0-0

## REED & FORD

2a BURNLEY ROAD — AINSDALE — SOUTHPORT

# EXCHANGE AND MART SECTION

**ADVERTISEMENT RATES.** Members' Private Advertisements 2d. per word, minimum charge 3s. (All capitals, 6d. per word, minimum charge 9/-). Trade Advertisements 6d. per word, minimum charge 9s. (All capitals 1/- per word, minimum charge 18/-). Write clearly. No responsibility accepted for errors. Use of Box number 1s. 6d. extra. Send copy and remittance to National Publicity Co., Ltd., 36-37 Upper Thames Street, London, E.C.4, by 22nd of month preceding date of issue.

**AMATEUR** (Army Officer) to be stationed in London for year wants "digs" with facilities for setting up QRP station. Box 90, The National Publicity Co., Ltd., 36/37, Upper Thames Street, London, E.C.4. (90)

**ARMY 12** transmitter for sale; 1.2-17.5 Mc/s; phone 25W, c.w. 40, £13. Charlton (G3IAC), 17 Thelwall Lane, Warrington. (122)

**BC342N** receiver, crystal, 230V mains, excellent condition. Offers over £10, excluding carriage. Davidson, Low Thatch, West Wratting, Cambridgeshire. (110)

**BC 348:** stripped, mechanical parts overhauled, resprayed, part assembled view rebuilding modern miniature valves. Complete with new valves, internal mains unit (working), photostat original circuit, case, £3. Valves (several) of most types either new or full emission, EF80, 6AK5, EC91, 8025, 811, 5Z4, 4/- each; 9001, 9002, 6F33, CV133, CV139, 5U4, UUS, 6SJ7, 6SA7, TT11, VT51, VR55, VR53, ARTH2, 5T4, 1/6d. Meters: RCA 500 mA, 3" square, 10/- pair; T1154 type, 100mA, 2/- each. Transformers: 500/500 200mA, 6.3V, 5V, £1; 260/260 60mA, 6.3V, 5V, 10/-, 260/260 60mA, 6.3V, 4V, 8/-, Power supply: 500V 150mA, 300V 80mA (separate transformers), variety of heaters, complete, cased, £2/5/-, CRO: VCR97 (full picture) in case with EHT rectifiers, capacitors (makes oscilloscope with previous unit but no time bases), £2. Woden: 600/600V 200mA, 5V mains transformer, £1/5/-. Vibrator pack, 6V input, 230V 100mA output, cased, suppressed for v.h.f., £1/5/-. Please add reasonable postage. G. I. Turner, "Deegeen", Clifford Road, New Barnet, Herts. BARnet 9035. (108)

**EDDYSTONE 640** for sale built-in Q-fiver, 6BA6 RT stage; offers, G3KHB, 483 Durdar Road, Carlisle, Cumberland. (105)

**EDDYSTONE 640**, one owner, realigned by makers November. Also 100 kc/s sub-standard and spare valves. Nearest £25. G5ZK, 57 Stratford Road, Stroud, Gloucestershire. (119)

**FERRANTI** Test Meter, reads high on 15V a.c. otherwise as new, 70/-. Goodmans 8" speaker, 10/-. CR100/B28, £16. Following brand new: AC37 motor, 25/-; 6-807 ceramic valveholders, 4/-; 2-μF 600V condensers, 5/-; 8-2A3, 3-5X4G, 2-VR150, 2-6AC7, 50/-. Set HRO valves (glass), 54/-, 6J6s, 4/6; 9001s, 9002s, 955s, 2/6; RK34s, 3/-; KT8C, 7/6; 6J5s, 4/-; 6K8, 6AK5s, 7/- each. 500 kc/s crystal, 7/6. Add postage. S.a.e. Enquiries, G8UO, 13 Chandos Street, Keighley. (111)

**FOR SALE Q-Max** v.f.o. £10. Labgear WB Multiplier 3.5-28 Mc/s, £3. UM3 modulation transformer, £3. Radiovision Commander, £46. New 813 with base, £2. MKII split stator condenser p.a. 60 x 60 pF 150 watts with tank coils 28-21-7 Mc/s, £3. Farkas, DL2TR, 33 Area, AKC, HQ. BAOR, 5. (116)

**FOR SALE:** 30 ft hollow mast tripod base—£4/10/0 (o.n.o.), B.S.R. Monarch 3-speed record changer—£5 (o.n.o.), both new unused, carriage extra. G2FQZ, 37 Westfield Avenue, Saltdean, Brighton, Rottingdean 3232. (120)

**GOING** abroad. Must sell. 50W all bands transmitter as G5RV. Separate v.f.o. self-contained. 100W 829B p.a. for 10m. 2m. transmitter with 829B p.a. 80W Modulator. Power supplies. 2 Racks. Home built receiver with Denco coil turret. Operating desk 5 x 24 ft. What offers? J. A. Lowe, G3GVF, Hillside, Hartley Wintney, Hants. (107)

**GUARANTEED** valves: 807 American, 3/6, 6 for £1; TZ40, 4/6; red EF50, 2/-, Apply Box 118, The National Publicity Co., Ltd., 36/37, Upper Thames Street, London, E.C.4. (118)

**HALLICRAFTERS SX24.** Good condition £20 or near offer, or would consider part exchange for AR88LF. Buyer collects—Merseyside. Box 112, The National Publicity Co., Ltd., 36/37, Upper Thames Street, London, E.C.4. (112)

**HALLICRAFTER S27** with standard "S" Meter, as new, £30. Q Max VHF Converter with 4 coils £5. 2000V Mains transformer at 500 mA £2. Pair 100TH, 30/-, 832 valves 15/- each. 829B £1. Bendix TA12 unmodified complete with all valves, £10. A considerable amount of other equipment for disposal:—G3XC, 33 Kendal Drive, Slough, Bucks. (Tel.: Slough 22566). (89)

**HAMMARLUND Super Pro** (BC794B) and p.p. 1.250 kc/s to 40 Mc/s. First £35, buyer to collect. Hilton, 27 Birch Road, Atherton, Manchester. (101)

**MAINS** operated W1191A wavemeter, £6. Avo Roller panel valve tester with manual, £10. 5" oscilloscope, £8. T1154M. 80-40-20 metres, £3. Rotary transformer 1200V; 10/-, 1/2 H.P. electric motor, 5/-. R 1132A receiver less valves. Two resistance capacity substitution checkers, 8/- each. Buyer collects. Chatley, 188 Albany Park Avenue, Enfield, Middx. (106)

**METALWORK.**—All types cabinets, chassis, racks, etc., to your own specifications. Philpott's Metal Works, Ltd. (G4BI), Chapman Street, Loughborough. (99)

**MODEL N.V.6.** Cryptan charger, 3 circuit, good looker, new rectifier, in carton; also model 40 AvoMeter as new, needs slight attention. Offers. Anyone want any 48/55 Bulletins? J. Hammond, 6 Robertson Road, Kelloholm, Sanquhar, Dumfries. (88)

**NO. 12 SET** Transmitter for sale £10. Buyer to collect; G2ATM, 37 China Street, Bulwell, Nottingham. (100)

**PATENTS** and Trade Marks. Handbooks and advice free. Kings Patent Agency, Ltd. (B. T. King, G5TA, Mem. R.S.G.B., Reg. Pat. Agent), 146A Queen Victoria Street, London, E.C.4. Phone: City 6161. 50 years' refs. (98)

**QSLs** and log book (P.M.G. approved). Samples free. State whether G or B.R.S. Atkinson Bros., Printers, Elland. (400)

**RESIDUE** of valves to clear:—  
At 2/- each:—CV85, CV215, WL1B24, CV221, 724B, CV115, CV233, TVO3/10 (similar RK34), 58, 42, EF36, 45, ACP4, 7475, 313C, CV54, VU133, 12AW6, 7V7, 2X2, CY54, 4033A, 95, KTW63, 76, 56, 4687, 41, 45, 27, 57, 9D2, PD220, 15D2, 7475, VT50, HL2K, 37, 6L7G, 78, HD21, CV188, EB34, 1637, P215, SP42, P61, D63, RL37, 7193, MHL6, EF54.  
At 4/- each:—5346Y, RK11, 3B24, T40, KT8, KT8C, T220, EL32, 9004, 956, 6SH7, 6AG5, 25L6G, 6A7, 6C5G, 1LN5, 6K7G, HL23, 8D3, V888, EF92, 12BY7, 12AV6, 6SA7, 12A6, X65, W63, 6F14, 6F1, AZ31, 6G6G, 12SK7, 12SR7, OA4, 6SJ7GT, 12X3, 83, KT63, 6F33, 9006, EAC91, 12AU6.  
At 6/- each:—404A, ECL80, 417A, 6SN7, EF55, 1B3GT, 6Y6, RL18, 6AK6, 6AQ5. At 10/- each:—CV228, 726A, 725A, 24G, 8005, 808, ECC84, PL33, QV04/7. At 35/- each:—829B, 3E29, QV07/40. Please suggest alternative if sold, and include 3d. each post and packing. G. A. Jeapes, 129 Cambridge Road, Trumpington, Cambridge. (93)

**R208** for sale. G3DIY, 4 Treveneth Place, Newlyn, Penzance. (117)

**SALE.** Hallicrafters S20R, no reasonable offer refused, or swap good type camera. Eburne, 55 Honiton Road, Wyken, Coventry. (121)

**SELL** or swap. CR100 coil unit, condenser, i.f.t.'s crystal, new chassis, 16" x 13" x 3 1/2", £4. 14 watt audio amplifier/modulator p.s.u. £5. RL85 receiver, 28-84 Mc/s. £4. Vibra Packs; 6V to 600V or 2 x 300V 100 mA, 30/-, 6V to 250V 100 mA 15/-, Wanted B2, T.C.S. or similar receiver. W.h.y.? All above for ZCI mark II or 2 1/2" sq. enlarger. Deliver/collect London or near. G3DSV, 11 Clivedon Road, London, E.4. (91)

**STATION** closing. Eddystone 750 for sale, as new. What offers? G3AYN, Spindle Tree, Gt. Shelford, Cambs. (109)
