Always on alert.

Always in touch.

Always on top of the situation.

OTTO's new Pro Series Speaker
Microphone stays on the job with you.

The new Pro Series Speaker Microphone maintains OTTO's exacting standards for durability while adopting a sleeker, more ergonomic profile. A field replaceable, heavy-duty cable assembly with quick disconnect RJ45 connector makes this speaker mic ideal for users with multiple radio platforms. It's cost efficient, flexible and tough — exactly the standard of excellence you've come to expect from OTTO.

What Gives Zetron Systems Their Reputation for Excellence?

Features. Functionality. Flexibility.

Communication centre managers tell us time and time again that Zetron systems deliver the reliable features, functionality and flexibility they need. Zetron also provides the partnership necessary to get their systems up and running and keep them that way.

Whether yours is a small, medium or large centre, Zetron has a radio dispatch console system you can depend on when it matters most. Every day.

"No other manufacturer could touch what Zetron consoles could provide. They gave us the capacity, functionality and expandability we were looking for."

— Communications Centre Director

Small-Medium Operations

DCS-5020 TETRA DIGITAL CONSOLE SYSTEM

- Integrates radio and phone communications.
- Highly configurable GUI.
- Supports TETRA, PMR, MPT, and conventional applications.
- Distributed modular architecture.

Large and Multi-Site Operations

ACOM ADVANCED COMMUNICATION SYSTEM

- State-of-the-art digital switching and multiplexing platform.
- Highly customizable functionality, architecture, and GUI.
- Integrates devices, information resources, and radio and phone communications.
- Highly redundant architecture.

CONTACT ZETRON to find the best Zetron console system for your operations.

MISSION-CRITICAL COMMUNICATION SYSTEMS

A Big Buy

As we went to press with this *RadioResource International* 2009 Worldwide Buyers Guide, an acquisition sure to change the dynamics of the professional mobile radio (PMR) industry was announced.

Harris, which entered the U.S. public-safety portable radio market last year with its Unity line of multiband radios, acquired Tyco Electronics Wireless Systems for \$675 million cash. The Unity radio is important for the U.S. market because of the various frequency bands — VHF, UHF,

and 700 and 800 MHz — used for public-safety communications. The portable is one of the first radios announced that will work in all those frequencies.

But Harris officials wanted the company to be a bigger player in the PMR market, and with Tyco Electronics Wireless Systems, formerly known as M/A-COM, Harris gains a full product line of mobile communications equipment. Harris officials are optimistic about the global PMR market. David Krebs with Venture Development Corp. (VDC) values the market at about \$8.4 billion in his column on Page 54.

The Tyco Electronics Wireless Systems business had 9.7-percent compound annual growth radio (CAGR) from 2006 to 2008, outpacing the industry 6-percent CAGR. That growth was driven by Project 25 (P25) adoption, the U.S. 800 MHz rebanding regulation, interoperability projects and systems, and the transition to digital products, Harris officials said.

Because Tyco Electronics Wireless Systems is the second-largest two-way radio supplier in the United States, the acquisition is significant for the North American market. The transaction, coupled with the pending outcome of the 700 MHz public-safety broadband spectrum, will cause many changes in the U.S. and Canadian markets in coming months.

But the buy is important in other geographic markets as well. Tyco Electronics Wireless Systems has about 500 systems installed worldwide and 1 million users. About 90 systems are installed in Europe; Middle East and Africa (EMEA); Asia Pacific; and Latin America. Tyco Electronics Wireless Systems, a member of the TETRA Association, donated \$1 million worth of emergency wireless communications equipment and field technical services for use by disaster relief teams in China in May 2008

We value your opinions! Please e-mail your feedback to me at swendelken@RRMediaGroup.com.

after the devastating earthquake in the Sichuan province. And while Harris is well known for its work with the U.S. federal

government, it also has numerous international clients.

Speaking of buying, this issue is all about PMR suppliers and products. You'll find details on wireless voice and data technologies and the companies that manufacture and supply them in the following pages. There's no other global mobile communications resource available, and we hope you use the information to make informed purchasing decisions. If you have suggestions for future issues, we welcome your input.

Digital Migration with
IDAS
ICOM DIGITAL ADVANCED SYSTEM

Are you thinking about migrating to a digital radio system? Looking for a cost effective solution? Icom's IDAS offers excellent cost performance, and the FDMA architecture maintains commonality with current analog circuitry to provide a decades proven platform for reliable operation and easy cost-effective maintenance. The "Mixed mode" feature enables both analog and digital to co-exist and it helps you shift to digital at your own pace and budget. IDAS was developed not just to offer advanced digital technology, but also offer the future of narrowband radio technology today.

IDAS: A good investment now that is future-proof for years to come.

ITU Releases ICT Development Index

The International Telecommunication Union (ITU) released the ICT Development Index (IDI), comparing developments in information and communications technologies (ICT) in 154 countries from 2002 – 2007.

The index combines 11 indicators into a single measure that can be used as a benchmarking tool globally, regionally and at the country level. The indicators are related to ICT access, use and skills, such as households with a computer and literacy levels. The most advanced countries in ICT are from northern Europe in addition to South Korea. Sweden tops the new ITU index, followed by South Korea, Denmark, the Netherlands, Iceland and Norway.

Significant differences exist among countries based on income levels. Countries with high-income levels pay relatively little for ICT services, while

APCO to Provide Training in Middle East

The training arm of the Association of Public-Safety Communications Officials (APCO) International is reaching Saudi Arabia in an effort to help secure a local university. King Abdullah University of Science and Technology (KAUST) accepted the APCO Institute's proposal to provide an all-inclusive training program for communication personnel in its new communications center.

Chris Fischer

KAUST is being built as an international, graduate-level research university dedicated to inspiring a new age of scientific achievement in the kingdom. Its core campus occupies more than 36 million square meters on the Red Sea and is located about 80 kilometers north of Saudi Arabia's second-largest city, Jeddah. KAUST's goal is to advance the mission of the university by providing and maintaining a safe

and orderly learning environment for the KAUST community. As part of this effort, KAUST will staff a 20-person communications center and use all of the APCO Institute's training programs and support software.

"The ultimate goal is to respect the rights and protect the safety of all students, staff, residents and visitors of their campus," APCO International President Chris Fischer said. "We are happy to support this effort by ensuring KAUST communications personnel are fully trained, self sufficient and prepared to successfully handle fire, EMS or police-related emergency calls." The training will be conducted during a three-month period by APCO Institute Adjunct Instructor Mark Boudreaux, director of Terrebonne 9-1-1 District in Louisiana, and began in April.

NEXEDGE™

DIGITAL COMMUNICATIONS WITH A DIFFERENCE

NEXEDGE™ is the new digital radio system from Kenwood. Thanks to its cutting edge DSP technology, all NEXEDGE™ equipment can be used to communicate with existing analogue radios either terminal to terminal, as a system, or even as a multi-site trunking network. This allows for a controlled migration from an analogue system to the proven advantages of a digital one.

NEXEDGE™ incorporates state of the art digital voice processing technology and filters to ensure absolute voice quality and reliability, even in the noisiest of environments. Digital encryption means complete protection from casual eavesdropping.

To find out all the advantages that NEXEDGE™ can bring you and full product specifications please go to <http://nexedge.kenwood.com>

countries with low income levels pay relatively more. Countries that rank at the top of the ICT price basket include Singapore, the United States, Luxembourg, Denmark, Hong Kong (China), United Arab Emirates (UAE), Taiwan (China), Sweden, Norway and Finland. Given the income levels of those countries, they offer the most affordable ICT services globally.

LONDON — U.K. telecom regulator Ofcom released a report that investigates concerns about the effects of wind farms on radio-communications systems, in particular their impact on terrestrial point-to-point and scanning telemetry wireless links.

Previous work was conducted to propose a practical method for establishing an exclusion zone around the path of a fixed link, within which it would be inadvisable to install a wind turbine. To consider further this theoretical model and to enhance

understanding of the effects, Ofcom commissioned a series of field trials to measure the effects of wind farms on fixed-link systems.

The report includes a series of measurements carried out with regard to the presence of wind turbines near wireless services. The opinions and conclusions stated in the report are those of ERA Technology and Aegis Systems. The report is available on the Ofcom Web site.

BAD MUENDER, Germany — The **Rohde & Schwarz** subsidiary specializing in professional mobile radio (PMR) systems changed its name to Rohde & Schwarz Professional Mobile Radio. The new name reflects the business field of the former R&S BICK Mobilfunk and positions the subsidiary on the world market, company officials said.

The PMR business segment includes TETRA networks and appli-

cations for industry and public-safety organizations. Rohde & Schwarz has supplied TETRA networks to more than 30 countries, including the Panama Canal Authority's radio network and the national security network of the Malaysian government authorities.

"The new name underlines that we are part of the Rohde & Schwarz group of companies," said Dr. Georg Haubs, president of Rohde & Schwarz Professional Mobile Radio. "This is only logical, since our customers and business partners have always associated our products and their quality and reliability with Rohde & Schwarz."

In May 2007, Haubs succeeded company founder Heinz Bick as president. Bick was a shareholder in the subsidiary until Rohde & Schwarz recently converted its majority shareholding into a 100-percent holding. Bick will continue to support Rohde & Schwarz PMR in an advisory role.

Radio Base Station/Repeater solutions

NEW!

MX800 – Digital APCO P25

- Analog now – upgrade to digital later
- 100 Watt output power now available

MX800 – Expanding System Solutions

- Digital APCO P25 base and repeater
- Analog system trunking base and repeater
- Transmitter power levels to 100 Watts
- Extensive options

MX921 – Power Efficient

- Very low current receiver – 58mA
- Extra high sensitivity
- Optimized for solar systems
- System base and repeater

MX920 – Economical

- Low cost
- TX rating same as MX800/921
- Internal space for PSU, duplexer or battery
- Vertical tower case option

we don't just build base stations—we redefine them.

UHF Data Pipeline

New technology promises data rates of 320 kilobits per second (kbps) in 25-kilohertz channels in the 400 MHz band.

By Dr. Kishore Mehrotra and Paul Daigneault

Narrowband licensed radio channels in the 400 MHz band have traditionally been used for both mission-critical voice applications and some medium-speed data applications in the public-safety, utility and transportation sectors. The 400 MHz band has propagation advantages over higher frequencies, particularly in paths that may not be direct line of sight (LOS) or that suffer from the effects of fading, diffraction or excessive absorption. Spectrum is finite and an extremely valuable resource, especially in this band. Because of the advantages 400 MHz offers, it's generally allocated only in narrow bandwidths for business or mission-critical applications requiring high reliability.

With new applications looking to use ubiquitous interfaces — such as Ethernet — requiring greater throughput and higher data speeds, a number of suppliers have moved to higher frequency wideband solutions to provide this pipe. When using new wireless techniques, the narrowband systems using licensed channels can provide high-reliability, highly spectrally efficient, ultra-low-latency solutions to applications requiring long-range and mission-critical performance. Most current research in communications techniques is direct-

ed toward the cellular, WLAN and WiMAX standards to increase data rates and provide fixed and mobile broadband wireless access and back-haul markets for mobile users.

Space-Time Coding and MIMO

Research by MiMOMax Wireless shows that some of the same techniques applicable to the cellular and broadband access markets are equally applicable to narrowband — 25-, 12.5- and 6.25-kilohertz — channels. Techniques such as space time, spatial multiplexing or multiple input multiple output (MIMO) can provide significant performance improvements in fixed point-to-point and point-to-multipoint narrowband communications links compared with traditional techniques used in these bands.

Conventional radio systems are sometimes referred to as single input single output (SISO) because they use a single antenna to transmit and receive signals, whereas MIMO systems use multiple transmitters, receivers and antennas. By using multiple transmit and receive antennas spaced sufficiently apart to decrease received signal correlation, spatial multiplexing can achieve high spectral efficiencies — high data rate per unit

bandwidth. These techniques fall into two broad categories: MIMO and space-time coding.

MIMO methods aim for high data rates and high spectral efficiencies but need highly independent or uncorrelated signal paths. Spatial coding uses multiple antennas to improve the signal quality by coding the information-carrying signal in space and time at the expense of data rate and spectral efficiencies. MiMOMax Wireless has demonstrated that sustainable gross channel data rates of 320 kilobits per second (kbps) are achievable in 25-kilohertz channels, providing coverage diameters in excess of 60 kilometers with antennas of moderate height. The use of licensed channels ensures that interference is minimized and high reliability is preserved despite the high data rate.

MIMO works because of the rich scattering experienced by the signal in an urban environment or in a closed building where multiple and uncorrelated copies of the signal are received and processed in a high-speed digital signal processor (DSP) to extract the transmitted information. The ideal channels for traditional MIMO are non-LOS (NLOS), because the LOS component tends to add nonindependent or correlated components. The

www.timesmicrowave.com

MiMOMax rack mount radio modem

advantages of the NLOS channels are that the highest possible spectral efficiencies with “square configuration” — equal number of transmit and receive antennas — are realizable. The LOS channels support only the rectangular configuration with the number of transmit antennas less than the number of receive antennas.

A practical example is the full-channel rank four-by-four MIMO configuration with four transmit and receive antennas also used by WLANs in indoor environments, while a two-by-four configuration with two transmit and four receive antennas is the low-channel rank version. The narrowband linking applications are longer LOS and experience little

By using multiple transmit and receive antennas spaced sufficiently apart to decrease received signal correlation, spatial multiplexing can achieve high spectral efficiencies.

scattering over long distances and aren't well suited for direct application of MIMO principles. MiMOMax systems use proprietary pattern diversity in two integrated transmitter and receive antennas to address this. If more than two transmit antennas are needed, then large spatial separation is needed, which may be undesirable. The uses of spatial diversity in addition to pattern diversity may, under certain circumstances, further enhance system performance. In the diversity situation, the four receive antennas become two pairs of similarly polarized antenna elements.

Modulation

Because the symbol rate is fixed, the modulation constellation size

determines the data rate in a given bandwidth. However, best performance is obtained when the constellation size is matched to the varying channel conditions. To pack more bits per symbol, higher order quadrature amplitude modulation (QAM) modulations are desirable. This requires higher channel signal-to-noise ratios, and thus, uncorrelated channels along with low noise figure front-end amplifiers. Adaptive modulation techniques can further improve the channel reliability or enable longer paths to be contemplated.

The power amplifier (PA) is nonlinear for higher signal levels and distorts the input carrier amplitude modulated information. Higher QAM performance requires tight linearization of the power amplifier because any PA distortion may lead to intermodulation distortion (IMD) products, which breach licensed channel transmit spectral masks and distort the transmitted signal information. The PA linearization is performed by

sophisticated Cartesian feedback circuits to meet the specifications of high output power, high efficiency, linearity and spectral mask purity to minimize any adjacent channel interference.

Equalization

The received QAM signal isn't directly usable after demodulation; the symbol spreads out in time because of the effects of channel, transmit and receive filters. This symbol spreading leads to inter-symbol interference (ISI), and equalization is required to recover the transmitted information. Equalization of the signal stream effectively tries to reverse the deleterious effects of the channel to get an estimate of the symbol trans-

mitted. MiMOMax Wireless uses a MIMO feedback equalizer algorithm to improve the channel. The equalizer has to be started with a number of known symbols, and then for the link setup, training symbols are transmitted before switching to the decision directed mode of operation.

System Overview

A MiMOMax point-to-multipoint digital link (MDL) system consists of a base radio unit (BRU) talking to multiple remote radio units (RRUs) on a set of frequencies f_1 and f_2 , such that f_1 is used for RF transmit and f_2 for RF receive functionality by BRU. The RRU uses f_2 for transmit and f_1 for receive. The RRUs are connected by Ethernet-10BaseT, and the BRU may also be connected to a link radio unit (LRU) by Ethernet-10BaseT. The LRU may be linked to another LRU by wireless using another pair of frequencies f_3 and f_4 .

The network device driver (NDD) accepts Ethernet frames from Ethernet physical link and extracts IP packets divided into multiple Ethernet frames by the software, and the Ethernet header and footer are re-inserted, then input to the transmit medium access controller (TXMAC). The TXMAC under control from the MDL protocol passes on the bits to physical layer for transmission. The received bits from the physical layer are processed by the receive medium access controller (RXMAC) under control from MDL protocol and then passed to dedicated software that removes Ethernet header and footer and combines multiple Ethernet frames to form an IP packet and submits it to the NDD, which in turn generates Ethernet frames for the Ethernet physical link. The overall data rate can be distributed between the Ethernet and various interfaces specific to the user, which may include serial data interface, VoIP traffic and more.

MAC Protocols

The data transfer between uplink and downlink takes place in integral

UHF Data Pipeline

units of time called the medium access control (MAC) frames. The MAC protocols manage the data transfer using these MAC frames in both directions. For point-to-multi-point wireless networks, the three relevant protocols are:

- Random access: slotted aloha protocol or a variation;
- Reservation based: distributed polling; and

- Taking turns: polling or token passing.

In cases with a lot of continuous data to be transferred from each RRU, polling or distributed polling is a good scheme because it suits the equalization; but this may block access for other RRUs. MiMOMax uses a hybrid slotted aloha for limited byte transfer, in which the RRUs compete with each

other to gain access to MAC frames. This is a proprietary variation of the original slotted aloha scheme because the equalizer training has to be provided for in the protocol within both uplink and downlink. This process works well when most of the RRUs need to transfer a considerable amount of data.

Spectrum is finite and valuable in the 400 MHz band, and needs to be used in the most efficient manner whenever possible. MiMOMax uses MIMO and space-time coding techniques, in conjunction with random access MAC protocols, to enable the implementation of low-latency, high-reliability and highly spectrally efficient wireless networks, in narrowband licensed channels. Sustainable gross radio channel data rates of 320 kbps are reliably achievable in licensed 25-kilohertz channels, yielding spectral efficiencies of 12.8 bits per second per hertz. Coverage diameters in excess of 60 kilometers with antennas of moderate height are reliably achievable, and high sites can provide even greater coverage. At 450 MHz, some NLOS and near-LOS performance can also be accommodated. Using licensed channels ensures interference is minimized and high reliability is preserved despite the high data rate. Performance may be further enhanced with the use of additional spatial diversity and redundancy. Adaptive modulation techniques may further improve link reliability or enable longer paths to be contemplated. ■

Kishore Mehrotra is a senior designer at MiMOMax Wireless and has 29 years of experience in aerospace and radio communications engineering, specializing in signal processing, algorithmic and protocol design.

Paul Daigneault is managing director at MiMOMax wireless and has tertiary qualifications in telecommunications and physics with 35 years of experience in radio, electrical engineering and business management. E-mail comments to editor@RRMediaGroup.com.

THIS SELF-SUPPORTING LATTICE TOWER CAN WITHSTAND HURRICANE WINDS UP TO 150 MPH.

IT HANDLES OVER 50 SQUARE MILES OF COVERAGE.

IT FEEDS CELLULAR TRAFFIC TO OVER 6,000 USERS.

AND IT JUST DROPPED ALL 6,000 OF THEM.

Why? Because a lightning strike an hour ago caused system failure.

The SignalHawk™ 2-port VNA / Spectrum Analyzer

For installation verification and minimizing downtime, precision, utility, and ruggedness are critical qualities. And the SignalHawk offers them all. It detects faults within 1.6" out to 1488'. It keeps you productive longer with 5+ hour continuous-use battery life. Work orders can be viewed right on the instrument with a .pdf/.doc viewer. And it passes the MIL Spec drop test. We can't help you prevent lightning. But we can help you prevent catastrophes. Like losing 6,000 users.

YOU'RE HEARD, LOUD AND CLEAR.

866.695.4569

“Total Solution from Analog to Digital Trunked Radios”

- World's 6th TETRA Terminal
- Data Communication
- High Level Security – Encryption

- AVL System
- SMS Communication
- Voice Communication

TETRA Portable

TETRA Desktop

TETRA AVL System

UNIMO has been recognized as a leader in KOREA's Radio Communication industry since 1971.

Now UNIMO is delivering Digital Convergence Products – TETRA, TETRA Modem, TETRA AVL System, TETRA + GSM phone.

“Special Features at Surprising Price”

Portable Radio
PK-100NW / PK-400NW

VHF
136~174MHz
UHF
400~470MHz

- Slim Design (32mm Depth)
- Robust & Rugged Design
- Selective Call & Caller ID
- 256 Channels & 16 Groups
- Numeric LCD Display

VHF (5W/1W) / UHF (4W/1W)
7.5V DC (Ni-MH/Li-ion)
53(W) x 126(H) x 32(D)mm
174g (Without Batt)

new
Portable Radio
PX-100NW / PX-400NW

VHF
136~174MHz
UHF
400~512MHz

- Home Channel (Dual PTT)
- High Power Loud Speaker
- Emergency function
- Stun & Revive
- Scrambler & Descrambler
- 16 Channels
- DTMF Encoder
- 2-Tone Decoder

VHF (5W/2W) / UHF (4W/2W)
7.5V DC 1500mAh Li-ion
56(W) x 110(H) x 32(D)mm
142g (Without Batt)

Voice Recording Pager
VRP-100 / VRP-400

VHF
136~174MHz / 5 Bands
UHF
400~470MHz / 8 Bands

- Pocket Size-Easy to carry
- Light Weight
- High Quality Speaker & Sound
- Rain Proof (IP-54)
- 2-Tone
- Vibrating & Voice Storage Mode

2.4V DC Ni-MH / 3V DC (2xAAA)
54(W) x 83(H) x 24(D)mm
82g (Without Batt)

new
TETRA Portable
MU-1000

350~380MHz
370~400MHz
400~430MHz
450~470MHz
806~870MHz

- True Color Menu driven GUI
- Push To Talk & Trunking(Telephony)
- Group Call & Individual Call
- Short Message Service
- Packet Service
- Roaming & Handover
- GPS based Location Service
- E2E Encryption

1W for 800MHz / 3W for 400MHz
7.5V DC 1800mAh / 1350mAh Li-ion
48.5(W) x 146(H) x 34(D)mm
(With 1800mAh Battery)
280g (With 1800mAh Battery)

new
RoIP Gateway & Wall Radio

- 4 Communication Channels for different type of radios (with/without internet service)
- Stimulated Communication with TETRA, VHF and UHF
- Stimulated Communication with Skype
- High Quality Voice
- Gateway:
292(W) x 65(H) x 170(D)mm
- Wall Radio Box:
360(W) x 60(H) x 240(D)mm

- Visit homepage www.unimo.co.kr/eng for more products.
- All products with ISO 9001 and ISO 14001.
- All products are made in KOREA.
- CE, FCC, IP54 and MIL-STD 810 E/F approved.

The Next Generation in Advanced Radio Test

Analog, DMR, dPMR, TETRA, P25, NXDN, LTR, MPT-1327. The world of land mobile radio communications isn't getting any easier. As you move to the next generation of digital radio communications, let Aeroflex help you lead the way.

With the latest digital radio formats supported, the Aeroflex 3920 offers unparalleled confidence and ease of use in testing digital and analog radio communication systems, including AM, FM, SSB, DMR, dPMR, TETRA, P25 and NXDN. Plus, with new Auto-Test II features, the 3920 fully automates routine testing and alignment of a variety of radios, without the need for technical input. Simply push the start button and let the 3920 do the rest!

For testing traditional analog FM/AM systems and trunked analog systems such as MPT-1327, the 2945B has established itself as the product of choice for professional engineers and technicians around the world.

The future of professional radio is changing and Aeroflex is leading the next generation of test.

Contact Aeroflex today to receive a data sheet on these industry leading test instruments, request a quote or arrange a product demo.

We're picking up some chatter...

Word is spreading about Genesis' Trunking Network Management Solutions. For over 20 years, Genesis has developed **wildly** innovative solutions for Motorola Dimetra TETRA, ASTRO®25, SmartZone®, SmartNet®, and now MOTOTRBO™. And in case you didn't catch the latest gab, **GenWatch3 iVista**, based on our groundbreaking GenWatch3® trunking management suite, will let you securely manage your trunking network online! Find out what the fuss is all about. Discover the future of Trunking Network Management.

CONTENTS

29 Amplifiers	
29-30 Antennas	
30 Base Stations/Repeaters	
30-31 Battery Equipment (Portable Radio)	
Analyzers/Conditioners.....	30
Batteries.....	30
Battery Chargers.....	30-31
31 Crystals/Channel Elements	
31-32 Dispatch Equipment	
Automatic Call Distributor (ACD).....	31
Dispatch Furniture.....	31
Graphics-Imaging Equipment.....	31
Interconnect.....	31
Radio Consoles.....	31
Turnkey Systems (business/industry).....	31
Voice Logging Recorders.....	31-32
32 Encryption/Scrambling	
32 Location Systems Equipment	
ANI/ALI.....	32
Asset Tracking/RFID.....	32
AVL/GPS.....	32
Modems/Transmitters.....	32
32 Mobile Computing Devices	
Handheld/Tablet Computers.....	32
MDTs.....	32
PDAs/Bricks/Radios.....	32
32-34 Mobile-Data Systems Equipment	
Mesh Networks.....	32-33
Packet-Radio Systems.....	33
Repeaters/Bridges.....	33
Wireless Broadband.....	33
Wireless LANs.....	33-34
Wireless Modems.....	34
34 Paging/Messaging Equipment	
Pager Receivers.....	34
Transmitters/RF Controllers.....	34
Two-Way Messaging Devices.....	34
Voice Storage/Retrieval Systems.....	34
34 Power Supplies/Equipment	
Backup Systems.....	34
Converters/Inverters.....	34
Load-Management Equipment.....	34
Power Supplies.....	34
Solar/Wind Power Equipment.....	34
Uninterruptible Power Supplies.....	34
34-35 PSAP/E9-1-1 Equipment	
CAD Software/Systems.....	34-35
E9-1-1 Location Equipment.....	35
In-Building.....	35
9-1-1 Call Answering.....	35
TDD.....	35

Time Stamp/Synchronization.....	35
35-37 Public-Safety Communications	
Alarm Systems.....	35
Automated Person Location.....	35
Automatic Notification Systems.....	35-36
Biometrics/Fingerprinting.....	36
CAD Add-Ons/Enhancements.....	36
Call Boxes.....	36
Early Warning Systems.....	36
Field Reporting.....	36
Intelligent Traffic Systems.....	36
Interoperability Equipment/Systems.....	36
Mobile Communications Vehicles.....	36
P25 Software.....	36
Records Management Systems.....	36
Station Alerting.....	36
Surveillance Equipment.....	36-37
Turnkey Emergency Systems.....	37
Video Surveillance.....	37
37-38 Radio Accessories	
Carrying Cases.....	37
Hands-Free Equipment.....	37-38
Headsets.....	38
Labels.....	38
Microphones.....	38
38 Radios	
Mobiles/Portables.....	38
P25 Radios.....	38
TETRA.....	38
38-40 Radio Systems	
ACSB.....	38
Conventional/Trunked.....	38-39
Microwave.....	39
Narrowband (6.25 kHz).....	39
P25 Systems Equipment.....	39
Repeater Controllers.....	39-40
Simulcast.....	40
Software-Defined Radio.....	40
Spread-Spectrum Radio.....	40
TETRA.....	40
VoIP/RoIP.....	40
40-42 Remote Site Monitoring	

Modems.....	40
Remote Transmitter Units.....	40
SCADA.....	40
Software.....	40-41
Telemetry.....	41
Transmitters.....	41
Vendor-Specific Protocols.....	41
Video Surveillance.....	41-42
42 Satellite Systems Equipment	
Mobile Data/Voice.....	42
42-43 Site/Tower Equipment	
Alarms/Access Devices.....	42
Cable.....	42
Cable Fault Locators.....	42
Combiners.....	42
Connectors.....	42
Diplexers.....	42
Duplexers.....	42
Filters.....	42
Isolators.....	42
Lightning-Protection Equipment.....	42
Microwave/MUX Equipment.....	42
Multicouplers.....	42
Multiplexers.....	42
Preamplifiers.....	42-43
Racks.....	43
Site-Management Software.....	43
Surge Protectors.....	43
Switches.....	43
Towers, Fixed/Mobile.....	43
Voting Products.....	43
43-45 Software	
CAD (see PSAP/E9-1-1 Equipment).....	34-35
Custom.....	43-44
Dispatch (business/industry).....	44
Engineering.....	44
FCC Licensing.....	44
Field Reporting (business/industry).....	44
GIS Mapping.....	44
Middleware.....	44
Mobile-Data Systems.....	44
Network Management.....	44
Paging.....	44-45
Records Management Systems (business/industry).....	45
RF Safety.....	45
Terrain Propagation.....	45
Voice Recognition.....	45
Wireless Internet Applications.....	45
45 Test Equipment	
45 Tone Signaling Equipment	
45 Wireless Local Loop/Rural Systems

When Coverage Counts

For more than 30 years RFI have been pushing the boundaries with a fresh approach to antenna and systems design. With products employed in the most demanding applications you can rely on RFI when coverage counts.

▶ Mobile and Base Station Antennas ▶ Multicoupling and Filtering Products ▶ Rebroadcast Systems

Contact us today to see how RFI can work for you

Call: +61 7 3621 9400 Email: export@rfi.com.au www.rfi.com.au

Two decades in two-way radio manufacture & design

At China New Century Communication Electronics Company Limited, we have been specializing in the R&D, production and sale of two-way radios for two decades. For more information of our products and company, please visit our website, <http://www.century-comm.com>. Or call us with your requirements today. We're looking forward to establishing a long-term business partnership with you.

NC-2000 NC-9600/A

Radio Accessories

In this issue, we look at a variety of radio accessories. For more information on a product, please contact the appropriate company via its Web site at the end of each listing. Be sure to mention that you found the information in *RadioResource International* magazine.

Abell Industries

The AM-ES is a remote speaker microphone originally for Abell A-80 and TH-308 series mobile radios. Key features include high quality, clear voice and adjustable high-low volume control, Abell executives said. The compact microphone includes retractable coil cord and a 360-degree swivel clip. Visit the Web site www.abell.com.cn.

AdvanceTec Industries

AdvanceTec Industries introduced the first commercial pro-installed Bluetooth Hands-free Kit. The kit is ideal for a variety of users from major metropolitan-area first responders to industrial fleet operators. The kit comes with an LCD display, 10-watt amplified speaker, a remote control module, junction box with built-in rapid charger, noise cancellation microphone and power cables. Visit the Web site www.advancetec.com.

Aria Industries

The PYD-32 replaces the original keypad microphone OEM keypad microphone KMC-32. The unit is compatible with Kenwood mobile radios with DTMF features. Visit the Web site www.ariabattery.com.

EF Johnson Technologies

The Discover GPS Speaker Micro-

phone transmits location, text messages and tracking information over 5100 ES series Project 25 (P25) portable radios. A large, backlit icon-based LCD screen provides graphical representation of relative distance and direction. Text messages and waypoints can be transmitted to groups, individuals or dispatch. Highly accurate location data can be transmitted over analog or digital channels, clear or encrypted, with every push to talk (PTT) or at pre-determined intervals.

The speaker microphone is compatible with commercially available graphic and mapping applications for complete real-time situational awareness. Visit the Web site www.efjohnsontechnologies.com.

Elma Electronics

C08 coded output switches provide tactical feedback while allowing users to change channels on mobile radios by feel without looking at the selection indicator. The radio switches are available in hex, gray or custom codes. The switches meet Six Sigma quality standards. Visit the Web site www.elma.com.

Impact Radio Accessories

Impact's wireless push-to-talk (PTT) line is available on Platinum series speaker microphones, lightweight headsets, throat microphones and a three-wire kit with only two wires, company officials said. The PTT is a rubber-coated submersible unit with Velcro finger strap that can be easily

concealed or fixed to handlebars, steering wheel or rifle barrel. All available products feature a fixed back-up PTT for dual functionality; all cables are

Kevlar reinforced, and all products carry a full two-year manufacturer's warranty. The products are available for nearly all brand and model analog and digital TETRA portables. Visit the Web site www.impactcomms.com.

Infinity Gear and Technology

The Infinity GPS-MIC allows users to see the exact location of their team in a heavy duty, water-rated speaker microphone with built-in GPS and LCD. By connecting the microphone to a two-way radio, users can relay location, heading, speed, elevation and identification (ID) and navigate to team members and waypoints. Estimated time of arrival (ETA) is calculated based on average speed. Visit the Web site www.infinitygearradios.com.

JDI

JDI makes microphones for two-way radios. Examples of microphones include lightweight headset, surveillance, desktop, and shoulder. MOTOTRBO is the company's latest connector for Motorola two-way radios, suitable for DP3400 and MOTOTRBO series radios. Visit the Web site www.jdi-co.com.

Kenwood Japan

KSC-326/256/356/316 are Kenwood's six-pocket multiple chargers. The chargers are designed for easy use in an inline layout, with a label space for each

Radio Accessories

pocket, Kenwood officials said. The optional KMB-30 gives a versatile wall-mounting option, officials said. The chargers can charge a battery by itself or a radio/battery/belt clip combination. The chargers provide reliable performance with built-in overcharge protection, independent circuit design for each pocket and RF immunity, officials said. Visit the Web site www.kenwood.com.

Klein Electronics

The Director is a professional two-wire surveillance earpiece for Kenwood, Motorola, Relm and Vertex two-way radios. The earpiece kit features a clear audio acoustic coil tube with quick disconnect, which comes

in black or clear; side-bar push-to-talk (PTT) button with noise reduction microphone; steel clothing clip; junction box with strain reliefs; and premium grade cabling. Optional Comfort-Ear noise reduction foam eartips and K-Flex semicustom earmolds are also available. Visit the Web site www.headsetusa.com.

Motorola

The heavy-duty headset, PMLN5275, for Motorola's MOTOTRBO radios is ideal for high-noise environments, such as a construction site, company executives said. The headset includes a

noise-canceling boom microphone and can be worn with or without a hard-hat. The push-to-talk (PTT) switch is located on the earcup. The headset offers a noise reduction of 24 dB. Visit the Web site www.motorola.com/MOTOTRBO.

Phonak Communications

Primero is the first boomless in-ear radio headset with active noise cancellation, according to company officials.

Fully compatible with all professional portable radios, the overt communications device provides rescue, security and emergency teams with industry-leading sound quality and optimal intelligibility, whatever the setting, officials said. Visit the Web site www.phonak-communications.com.

Ranger Communications

The SRA-166B speaker is made of durable, long-lasting material. The

speaker has five LEDs in three different colors to indicate low, medium and high audio levels, and is directly driven by the audio signal. Visit the Web site www.rangerusa.com.

Zetron

Zetron's Intelligent Radio Interface Module (iRIM) expands its Kenwood radio interface support to include Kenwood's TK-5710/5810 and NX 700/800 radios. The module provides a

way to transition or interoperate between different proprietary two-way radio protocols when using the company's radio dispatch consoles. The module provides control over push to talk (PTT), privacy code monitor, channel or talk-group selection, repeat/talkaround and coded/clear. Visit the Web site www.zetron.com.

ACCESS ANYWHERE

Replace your legacy analog VHF/UHF system and expand your voice and data capacity with a low cost digiNX Wireless Delivery System -- a spectrally efficient, point-to-point digital radio that supports:

- Multiple voice & data channels
- Configurable frequency
- Ethernet
- Configurable interface

Ideal for

- Telephone line extension
- Leased line replacement
- WAN/LAN
- Remote oil field operations
- And many more applications . . .

**New VoIP technology
lowers system cost**

Data Applications Could Drive Digital Shift

By David Krebs

Professional mobile radio (PMR) solutions represent the communications link for many users across industries including public safety, military, utilities and transportation. PMR has its roots in AM and FM radio technologies used for public safety broadcast messaging during the 1930s and 1940s and portable radio technology, which had its first major breakthrough with the advent of transistors in the 1950s. Market research firm

Venture Development Corp. (VDC) estimates the global market for PMR solutions — hardware, software and services — at about \$8.4 billion in 2008 with an installed base of mobile and portable radios nearing 20 million units.

Although clearly a mature market, VDC predicts continued, consistent growth for PMR solutions during the next several years, much of which will be replacement sales as users migrate to next-generation platforms. In addition to developments around interoperability, a major PMR thrust has been the analog-to-digital transition. Based on research VDC recently conducted among more than 650 current and future global PMR users, respondents from all of the major geographic markets predicted a strong shift to digital technology during the next five years.

About 70 percent of the current installed base of PMR radios remains analog. While VDC's research indicates that by 2012 the total installed base of digital PMR radios should reach 66 percent, the transition is taking longer than expected. This is largely a factor of the long shelf life and replacement cycle of PMR solutions and the lack of clear investment drivers. A primary factor motivating the shift toward digital solutions comes from efficient use of spectrum;

digital transmission more easily accommodates the 12.5- and 6.25-kilohertz channel spacing that most industrialized countries are moving toward. Specifically, digital solutions are twice as spectrally efficient as analog systems, supporting one communication per 6.25-kilohertz channel as opposed to one per 12.5- or 25-kilohertz channel in legacy analog systems.

Additional benefits of digital PMR solutions driving adoption include:

- Improvement in range and quality of communications by as much as 20 percent;
- Low bit error rate (BER) improving reception in fringe areas;
- Improved security features;
- Less expensive to operate as subscribers are added; and
- Data application opportunities.

Wireless-data applications may represent the key missing ingredient. According to VDC's research, PMR end users are not only looking for improved performance from PMR solutions, they are also looking to support a broader set of applications. In addition, the emergence of several accepted global digital standards are critical factors accelerating the transition. Voice will remain the killer application for PMR solutions — especially among traditional users such as public safety — and enhancements of voice capabilities and quality are significant investment drivers by themselves.

However, wireless-data opportunities are expected to be a critical factor driving next-generation PMR adoption, especially among emerging user segments. In fact, almost three in four end-user respondents indicated that they plan to support wireless-data applications on their PMR networks.

While standard data applications such as messaging are fairly common, requirements for more complex applications that improve worker produc-

tivity and field-based communications at the point of interaction are emerging. In addition, core PMR users increasingly leverage GPS and location-based services such as AVL. Finally, PMR support of video for remote monitoring and surveillance represents a critical growth segment.

Perhaps the greatest challenge to wireless-data application proliferation on PMR networks is competition from cellular networks, increasingly becoming the data pipe of choice for many organizations. Moreover, among users where voice is not considered mission critical, increased availability of push-to-talk (PTT) capabilities by cellular service providers is considered a key barrier. Finally, a key issue for PMR vendors is balancing the voice and data requirements with radio form factor design considerations. Most radios are optimized for voice applications — large PTT buttons and rotary dial — and with the exception of simple messaging applications, are not viable platforms for data applications.

While the shift toward digital is clear, PMR vendors need to make sure that their technical and commercial roadmaps include the following:

- Availability of multimode (analog and digital) radios to enable a more seamless transition and support backward compatibility with legacy analog systems;
- Competitive pricing with existing analog solutions with the premium not to exceed 20 – 30 percent;
- Development of form factors that better support wireless-data applications, especially improved user interfaces and intuitiveness; and
- Improved leverage of the security capabilities of digital technology. ■

FORMER WACOM CUSTOMERS:

Telewave can support Wacom commercial and amateur products. Many Telewave products share a common design heritage with Wacom, and most of our cavity and isolator products are drop-in replacements for Wacom. We can repair, rebuild, and expand most existing Wacom items or systems without a complete change-out.

Telewave, Inc. delivers high performance ... everywhere, everytime.

We bring 36 years of product engineering and system design expertise to the table for every customer, large or small.

With a full line of standard products, and the ability to quickly create custom designs for special projects, Telewave provides unmatched support for Public Safety, Government, and Business radio systems.

Call us today at 1-800-331-3396 or +1 408-929-4400 and discuss your requirements with our expert sales engineers, or visit us at www.telewave.com
