

THE GLOBAL INFORMATION RESOURCE FOR MISSION-CRITICAL COMMUNICATIONS

2012 WORLDWIDE BUYERS GUIDE

[illegible]

This collage features a variety of mobile communication hardware. It includes several mobile phones, some ruggedized like the Motorola T600, and others showing call logs or settings. Antennas are shown both as external components and integrated into phone designs. Signal boosters and amplifiers are depicted in different form factors, from small USB-like devices to larger rack-mountable units. Specialized equipment such as the STI Field Test 7 for network analysis and the Mobility Sensor GPS Box for location tracking are also included. The background is a light blue gradient with faint circular patterns.

NEXEDGE®

KENWOOD DIGITAL SYSTEMS

NXDN®

NXDN® technical standard will be opened in 2Q 2012.

Team Up

NEXEDGE® digital radio systems offer the ideal solution **for all your conventional and trunked communications needs**. Support for mixed FM/digital operation ensures smooth migration from legacy systems with all the advantages of advanced digital technology.

The expanding lineup of spectrum-efficient NEXEDGE® products is compatible with both 12.5 kHz and 6.25 kHz channels, while **multi-site IP network support offers almost unlimited scalability**. Isn't it time you teamed up with NEXEDGE®?

- Increased effective coverage area
- Low noise for superior clarity
- Simultaneous voice & data
- Inherent secured voice

Simplifying advanced communications - for even the harshest working environments

DAMM's fully IP-based TetraFlex® digital radio system is the ideal solution for a wide range of users, from harsh working environments to large-scale mission critical applications.

Simple to set up, easy to use

TetraFlex® has been designed to provide robust, scalable, user-friendly and – above all – 100% reliable digital radio communications for a vast range of applications. The system's Plug'n'Play simplicity, modularity and intuitive user interface makes TetraFlex® extremely quick to deploy, and minimizes overall cost of ownership.

Future-proof flexibility and scalability

There is no limit to the size of the network that TetraFlex® can support. The

distributed architecture and TETRA over IP technology allows easy and effective network planning and integration. In addition, built-in scalability and modular product flexibility secures your investment for the future.

Compact, versatile and rugged

TetraFlex® base stations are compact enough to ensure quick and easy outdoor installation, even where space is limited or under harsh environmental conditions.

Intelligent software for maximum usability

The intelligent TetraFlex® software enables simple self-configuring site expansion, even while in operation. TetraFlex® also comes with a wide range of valuable integrated software, such as network management, dispatcher solution, voice/data recording and replay facilities, SIP gateway to legacy networks, packet data gateway and open application interface.

DAMM solutions and support are available worldwide through an exclusive network of authorized partners

Where Reliable Meets Cutting Edge

***Start** with a reputation for reliable solutions that are backed up by excellent support. **Add** cutting-edge innovation and systems built from the ground up with the user in mind. **The result:** Breakthrough solutions that deliver the state-of-the-art functionality you need right now... and the flexibility to adapt to the future.*

Zetron's cutting-edge systems give you:

- Pure, end-to-end IP.
- Redundancy—no single point of failure. Availability approaching 99.999 percent.
- The most advanced UI in the industry. Streamlines and simplifies operators' tasks.
- Next-Generation 9-1-1 i3 readiness that carries you into the future.
- Interoperability. Supports more radio formats and interfaces than any other vendor.

Fifth Annual Buyers Guide

Welcome to the fifth annual Worldwide Buyers Guide. It is a dynamic time in the industry with the majority analog user base looking to upgrade systems or at least maintain networks that are in place. Many technologies, products and services are available to help mobile radio users as they look ahead to equipment purchases. The need for broadband systems is also coming into play for mission-critical industries in some countries and markets.

This guide will help with the often complicated buying process for our industry. You'll find details on wireless voice and data providers from manufacturers and software companies to services firms and distributors and manufacturers' representatives. The Product Category Index, which begins on Page 32, includes 184 different categories of products with a list of the vendors that manufacture or develop that product or software. Then use the company indices to find websites and more information. You'll find nearly 600 companies listed in the indices that begin on Page 20.

The online version of this information is also available at RRImag.com. Just click on SuperGUIDE on our home page. If your company isn't included, download a company profile from the website and return it to us or contact us at profiles@RRMediaGroup.com.

Our editorial and research staff goes to great lengths to ensure the data is updated and accurate. If you have suggestions for future content or feedback on something we've already covered, please contact us.

In addition to the large amount of company and product data in this issue, learn how both analog and digital networks are prevailing in the German market with the article beginning on Page 14. Interestingly, Germany's digital market has affected the established analog market in unexpected ways.

We value your opinions! Please email your feedback to me at swendelken@RRMediaGroup.com.

Australia Considers 800 MHz Public-Safety Broadband Spectrum

Australia is investigating the possibility of allocating spectrum to public-safety agencies in the 800 MHz band to support the deployment of a national interoperable mobile broadband network. The Public Safety Mobile Broadband Steering Committee is working with the Australian Communications and Media Authority (ACMA) as part of its review of the 805 – 890 MHz band. The ACMA is reviewing evidence provided by the committee, but has not made a decision regarding allocating broadband spectrum for use by Australia's public-safety agencies.

The ACMA is also working with the Asia Pacific Telecommunity (APT) and the International Telecommunication Union (ITU) on arrangements for personal protection and disaster recovery (PPDR) purposes for both narrowband and broadband in the Asia Pacific Region (ITU Region 3).

The broadband steering committee also identified the need for arrangements with private sector telecommunications organizations to provide additional broadband capacity if required by Australia's public-safety agencies during major events, incidents or natural disasters or in remote areas where network construction is not viable.

The committee is developing an implementation-planning framework for a nationwide interoperable mobile broadband capability and will soon commence

work on the governance arrangements for oversight to the implementation and operation of a broadband network.

The Standing Council on Police and Emergency Management (SCPEM), established by the Council of Australian Governments (COAG), is expected to review the committee's report at its next scheduled meeting in July. The outcome of SCPEM's consideration is likely to result in a report to COAG by the end of 2012.

Since its formation in May 2011, the Public Safety Mobile Broadband Steering Committee has completed work on three consultancy projects focusing on public-safety agency requirements and demands. Projects focused on the costs associated with a range of models for consideration, technical aspects and radio spectrum calculation, which all include backhaul infrastructure required for a national broadband network.

EXPERIENCE IN PUBLIC TRANSPORT

Facing challenges like time table compliance, service interruptions and operational control, Public Transport companies depend on modern control and communication systems.

The Prague Public Transportation Department, where nearly 2200 trams and buses transported more than 1.2 bn passengers in 2011, relies on an onboard computer and information system developed by ConnectTel which provides the passengers with information about the next bus stop, the time of arrival and advices on connecting services.

The onboard computer furthermore collects data from the Can Bus like speed, fuel consumption, usage of breaks and other data to optimize service intervals, improve the performance of the driver and to recognize technical problems at a very early stage. In the event of an emergency, the onboard computer will store the pictures from the cameras installed in a bus.

GUARDIANTM | 2

IN ANY EMERGENCY, COMMUNICATION IS VITAL

When multiple agencies are involved the ability to communicate can make the difference between success and failure.

Designed for First Responders, Public Safety, and Federal users, Guardian 2 radios feature narrow and wide band conventional analog, P25 Digital, and P25 Trunking solutions. Built to keep communications clear in the harshest environments, you manage your investment by choosing the optimal configuration for each user.

With models that support **VHF** (136-174MHz), **UHF** (380-520MHz), **TriBand** (UHF, VHF, and 762-870MHz) you have links to agencies operating across networks and frequency bands, and optional FIPS certified encryption keeps those communication links secure when required.

Guardian 2 radios are the solution for your communication needs. Learn more about Guardian radios from Datron at www.dtwc.com.

World News

SINGAPORE — Selex Elsag was awarded a contract by **NEC Asia Pacific** to upgrade the Singapore North East Line (NEL) TETRA communications system. Selex Elsag supplied NEL's existing TETRA system, which provides voice and data communications between operating control center (OCC) operators and other users of the network.

The communications upgrade is in line with the purchase of 18 new trains to meet increased projected ridership.

HAMBANTOTA, Sri Lanka — China Harbour & Engineering Co. (CHEC) of Sri Lanka selected **Cassidian** to equip Hambantota International Airport with a secure TETRA radio network. Hambantota International Airport will be inaugurated in September as the second international airport in Sri Lanka.

Queens Radio Marine Electronics in cooperation with the Cassidian team

based in India will install, commission and activate the system, called Claricor. The new network will include an AVL function and can be integrated with planned airport security systems.

TAIPEI, Taiwan — Taiwan-based Vee TIME continued the expansion of its Taiwan high-speed railway (THSR) broadband network with **NewNet's** WiMAX technology.

WELLINGBOROUGH, U.K. — The TETRA market shipped the largest number of terminals in 2011. The market saw growth of more than 9 percent compared with the terminals shipped in 2010, according to data from IMS Research.

Although growth is projected for the next five years, 2011 may be a high in terms of the level of growth. The year saw significant developments in regions outside Europe including the Middle East, Africa,

South America and Australasia. "The success TETRA has had in the European arena is now being emulated in other markets, where new devices that offer enhanced capabilities including ATEX, covert and TETRA Enhanced Data Services (TEDS) are now gaining traction in the public-safety and security markets," said Deryn Evans, mobile radio market analyst at IMS Research.

TOKYO — Icom announced an internal reorganization and created new technology and production teams.

"Icom's recent organizational changes reinforce the company's mission of becoming a true solution provider," said Icom America President Hiro Nakaoka. "By restructuring our sales team and offering more support to technical services, Icom continues to provide innovative solutions for our internal and external customers."

EUROPE

EENA Releases Next-Generation 1-1-2 Standard Document

European Emergency Number Association (EENA) released the first public version of the next-generation 1-1-2 Long Term Definition (NG 1-1-2 LTD) standard. The document provides the necessary elements to design a modern and efficient emergency call management process, where citizens can reach 1-1-2 with voice, text, videos and pictures and where data can be shared to facilitate the intervention of first responders.

To ensure global interoperability, EENA re-used existing standards as much as possible. In particular, European public-safety answering points (PSAPs) adapted work from the U.S.-based National Emergency Number Association (NENA). The NG 1-1-2 LTD document defines a long-term architecture for European emergency services

and remains voluntarily close to the NENA i3 standard.

"This is undoubtedly a key milestone reached. Europe was lacking such a reference document, and hence, we are proud to release the NG 1-1-2 LTD today," said Hannes Tschofenig, who has been drafting next-generation emergency services standards since 2004

and chairing the EENA NG 1-1-2 Technical Committee since 2009.

As in NENA i3, the core concept is the deployment of Emergency Services IP Networks (ESInets) to foster interoperability between emergency agencies, improve redundancy and benefit from the availability of larger pools of resources.

"This is a crucial document for the future of our emergency services and for the safety of European citizens," said Cristina Lumberras, EENA technical director. "We are grateful to our NG 1-1-2 committee members and to our friends at NENA."

The document will be updated to include new standards and specifications, as well as to cope with rapidly changing technologies. Additional documents preparing the transition from E1-1-2 to NG 1-1-2 will also be published.

INTERNATIONAL

P25 Group Completes Digital Audio Tests

The Audio Performance Working Group (APWG), a working group under the Project 25 Interface Committee, completed work on digital versus analog audio performance testing under high-noise conditions.

The U.S. Public Safety Communications Research (PSCR) performed the tests. Representatives from PSCR, Project 25 (P25) standards groups, manufacturers, and fire and law-enforcement agencies collaborated to create a test plan intended to further characterize the background noise performance of analog and digital communications technology.

The tests used a modified rhyme test (MRT) method, which played a single word through the test setup and then asked the listener to select the correct word from a list of rhyming words. The MRT method was used to compare the performance of four reference models.

The test conditions aimed to represent real-world background noise situations and alternate use of breathing apparatus masks (SCBA) and PASS3 alarms typically required at fire scenes. In the clean channel scenarios, analog and digital audio performance was statistically equivalent as observed in four out of eight scenarios. Three of these four scenarios used the SCBA mask fitted with a voice port. Analog audio performance scored higher than digital in the other four clean channel conditions scenarios. Three of these four scenarios used the SCBA mask with an internal microphone.

In the six degraded channel scenarios, digital performed statistically better than analog as observed in the degraded channel in five scenarios. It was noted that holding the microphone closer to the voice

port resulted in improved digital audio performance. Analog and digital performance was observed to be statistically equivalent in the final degraded scenario.

The use of different PASS alarms had no significant impact on audio intelligibility; however, the use of a mask with an internal microphone improved intelligibility in all analog cases, and most digital cases. Also, the full-rate and half-rate digital reference models were observed to be statistically equivalent in all scenarios.

"Great strides have been made over the past three years in improving intelligibility in high-background-noise environments," said John Lambrou, chair, APIC systems task group. "Continued efforts in the industry hold the promise of even more improvements."

Digital and Analog Prevail in Germany

As the national TETRA public-safety network slowly rolls out, Germany sees steady analog markets, as well as the emergence of other digital technologies.

By Max Zerbst and Hans-Joachim Langermann

The rollout of the national German TETRA network for public safety and security (PSS) continues; nevertheless, the rollout is delayed and behind the schedule and expectations of the PSS users. Other TETRA networks are deployed in the country, spread among public transport, utilities, municipalities and industrial applications. During the past three years there have also been deployments of Digital Mobile Radio (DMR) and NXDN-based networks throughout the country.

Some regions still have public trunked service available based on MPT 1327 analog technology. The largest MPT 1327 public network covers a region in southwest Germany. In fact, apart from the digital deployments, the country is experiencing a certain revival of analog products and systems. Although market forecasters report the market share of analog professional mobile radio (PMR) products will decrease below 20 percent in

the long run, there is a strong demand for analog terminals and infrastructure, largely because of the delay of the PSS TETRA network.

Because the nationwide TETRA network was expected to be available sooner, PSS organizations reduced spending on maintenance of their analog terminal equipment. At the same time, manufacturers stepped out of the analog business. The result of the delay is now an increased demand for analog mobile terminals, which are certified according to German PSS specifications. Last year RADIODATA, located in Berlin, sold thousands of analog mobile terminals. The demand is expected to continue for the next two or three years. According to PSS insiders, the analog simulcast networks will be kept alive at least until 2020.

Fire Networks

A similar situation is occurring

with radio coverage in large buildings and shopping malls. Analog radio coverage is activated on demand, such as in the case of a fire. In general, the systems are composed of one or more base stations used as simulcast repeaters with frequencies in the VHF high band, driving a leaky-feeder cable or more seldom a distributed antenna system (DAS). In most cases, redundancy is required for the base stations, and the leaky-feeder cable is then formed as a ring. The radio communications for the firefighters is full duplex, which avoids the need to press a push-to-talk (PTT) button.

The requirement for the network installations is part of the building permission and is a prerequisite for final approval. As such, the building owner has to bear the cost for procurement, operation and maintenance. The technical rules applied are specified by the regional fire service organization.

Again business opportunities for

By equipping public safety agencies with better communications and richer information everywhere, we can improve efficiency and safety for everyone.

How can you
better
communicate
when every
second counts?

AT THE SPEED OF IDEAS™

According to PSS insiders, Germany's analog simulcast networks will be kept alive at least until 2020.

the analog systems have developed from the delayed rollout of the digital PSS network. Although the TETRA rollout has advanced in highly populated areas, TETRA has not yet arrived at many of the fire services, which are still operating on their analog radio equipment. The primary reason for this delay is the split in responsibility over the fire services. An agency of the federal government oversees the TETRA network deployment. The fire services depend on budgets from their local states in Germany, and the fire service budgets are determined by whichever state the fire service is located. In many of the poorer states, the fire services face delays in deploying the new TETRA network because they can't afford it.

Germany's Spectrum

All this is made even more difficult by an ongoing discussion about the right approach for TETRA in-building coverage, such as direct mode operation (DMO), repeaters for the outdoor PSS network and base stations with switching capabilities. As a result of these obstacles and pitfalls, the preferred technology for new buildings is still analog.

In Germany spectrum for TETRA and MPT 1327 networks is allocated in the UHF band, at 380 – 400 MHz for PSS users and 410 – 430 MHz for non-PSS applications. Traditionally, VHF bands low and high are reserved for two-way radio with assignments toward essential users, such as public transport, utilities and industry. A few

years ago, a refarming process started for the VHF high band to change the channel bandwidth from 20 kilohertz to multiples of 6.25 kilohertz and to suspend the assignment of spectrum to users. This is why some DMR and NXDN-based networks can be operated in VHF high band.

Many electric utilities still operate analog two-way radio networks with frequencies in the VHF low band and as a specialty use full-duplex communications. Their radio networks normally serve large areas with a relatively small number of users.

According to statements of the German regulator Bundesnetzagentur, the spectrum in the VHF low band can be kept for DMR deployments. Again, the regulator weakened the traditional assignment and avoided any preference for a technology, either analog or digital, to be applied.

DMR Deployments

This regulatory change was

Essential Equipment for Portable Radio Communications

Give your Handheld the POWER of a Mobile Radio! The LMR Systems Vehicular Repeater is wired directly to your mobile radio. When your handheld radio transmits a signal, the vehicular repeater receives the transmission and instantly re-broadcasts it through the mobile radio. The LMR Systems Vehicular Repeater interfaces with virtually all Mobile Radios, including Motorola, Kenwood, Harris, EF Johnson, Tait, Hytera, Icom, Midland, and many more!

TETRA Series Products & Solutions

conductive to DMR network deployments for electric utilities. These deployments are special because they use frequencies in VHF low band, and they are DMR Tier 3 networks, trunked radio systems according to European Telecommunications Standards Institute (ETSI) TS 102 361-4 (DMR Systems Part 4: DMR Trunking Protocol). Worldwide these are the first DMR trunked radio system deployments operating in VHF low band at around 70 MHz. The advantage is that existing sites could be used, including uninterruptible power supplies (UPS) and antenna constructions. The radio coverage shows no particular difference between a digital and an analog-based radio site, provided frequency and emitted radio power (ERP) are the

The architecture of a DMR Professional Radio (DIPRA) network supplied by RADIODATA is composed of base stations and a central switch, all interconnected by IP-based communications. At the switch site, there is interconnection to private automated branch exchange (PABX), public-switched telephone network (PSTN) and LAN. The latter is a prerequisite for data applications over DMR and for managing the DIPRA network. A DMR network in north Germany has been used in the day-to-day operation of the utility since last year, while

As in many other countries of the world, PMR in Germany is in a transition phase from analog to digital systems. While the digital business gains momentum, uses of analog technology continue as well. ■

Hans-Joachim Langermann is the CEO of RADIODATA in Berlin. He joined the company in 1983, and in 1998, he was appointed managing director and CEO. Langermann's experience spans almost 30 years.

One Test Set for All Your Narrowbanding Test Needs

dPMR

P25

TETRA

P25 TDMA

NXDN

DMR

Whatever land mobile radio system you rely on, the Aeroflex 3920 has the capability to test it. With multiple radio test systems for P25, MOTOTRBO™, TETRA, NXDN™, dPMR, and now P25 Phase II TDMA, the Aeroflex 3920 has the POWER and accuracy to test today's technologies.

The Aeroflex 3920 is the first digital and analog radio test set to provide full coverage of all of the major narrowband digital radio standards, for both mission critical and professional radio systems. With the new capability to test P25 Phase II, the Aeroflex 3920 is leading the way in narrowband radio test. Other radio test sets can't measure up to the 3920. Only the 3920 provides accurate, reliable, and complete radio test and alignment. The Aeroflex 3920 is the one test set for all your test needs.

FREE DEMO! Call 1-800-835-2352 to request a Free Demo and put the 3920 exclusive capabilities to the test!

Learn more by going to www.aeroflex.com/RRBG2012 and request a data sheet on the 3920.

AEROFLEX
A passion for performance.

www.aeroflex.com

You're here. Ready to respond?

Daniels transportable repeater systems provide a complete temporary radio site. Set up in just minutes!

- > Long operational battery life
- > Rapid deployment
- > Full P25 encryption
- > Stealth & Tactical Packaging
- > Supports all frequency bands + crossbanding

1. Collapsible Antenna Tripod Mast
2. Transportable Repeater
3. 60 Watt Solar Panel
4. 35 Ahr Battery Kit
5. Solar Case and Regulator

Your Partner for State-of-the-Art Product Development

- Advanced technology radio adapters with Wireless PTT, Bluetooth, Data and GPS capabilities

Many more models available.

Wireless PTT

GPS Box

BT Mobile

In your housings or ours

- Rugged speaker microphones including waterproof designs, wireless PTT, and integrated GPS systems

Wireless

- Custom accessory designer
Low MOQ and Advanced Engineering

MobilitySound is a radio accessory design company which develops accessories for rugged two-way radio applications. Our high-quality design technology delivers state-of-the-art of product performance, and enables operation under outdoor and difficult environments. We offer PCBA, reference design, and technical documentation to facilitate customers adopting our products. Using MobilitySound's reference design and assistance from our highly capable support team, customers can focus their attention on product differentiation. Our solutions are targeted at applications such as Bluetooth Accessories, GPS for Mobiles and Portables, Wireless PTT, etc. We can provide customers a competitive edge through customized designs and application specific solutions.

X10DR[®]

LIBERATE YOUR MOBILE RADIO

SECURE WIRELESS COMMUNICATION
via your vehicle's mobile radio

60m.... 150m.... 300m...

LIBERATE YOUR MOBILE RADIO™

SECURE WIRELESS MICROPHONE

TAKE THE POWER OF MOBILE: MOBILE!

The X10DR unleashes the power of your mobile radio allowing wireless communication with a fixed mounted or vehicle radio: 60, 150, 300 metres/yards and onwards.* Now users can communicate with enhanced clear audio, with the power and range of a mobile radio whilst not being tied to the vehicle, allowing the user to be truly mobile in every operational environment.

Enquires: x10dr@wirelesspac.com
www.wirelesspac.com

Mobile radios will never be the same!

WIRELESS PACIFIC™

... WHEN IT MATTERS

* range is subject to environmental conditions. Wireless Pacific™ X10dr®, liberate your mobile radio™ are all trademarks or registered trademarks of Wireless Corporation Ltd

A world wide
mobile radio
solution provider

Radio & Trunking Distributors

Provide professional design implementation and support services for radio trunking networks, as well as the expansion or integration of existing ones. RTD offers full turnkey solutions, as well as consulting, training, maintenance and support world wide.

Recent systems deployed worldwide.

Government - 911 System US Virgin Islands
Saudi Aramco Mobil Refinery Company
Airports Baghdad, Dubai-Skopje, UAE-Sharjah, Riyadh
Gazprom - Russia

Radio Data Communication Solutions

DSP4200/2K

USB 2.0
Certified Drivers
Small Cabinet Size

The DSP4200/2K is our latest commercial CLOVER DSP Modem featuring a USB 2.0 connection to the PC, certified drivers for Windows, and a small aluminum enclosure.

HAL CLOVER technology is voice bandwidth, real-time adaptive waveform and protocol ARQ designed specifically for data communications where signal strength and quality vary.

Our 40th year of quality product and support.

M4200

Lightweight
Ruggedized
USB Powered

The M4200 is our newest product designed for field operations where a small and lightweight ruggedized all aluminum enclosure is required.

The M4200 cabinet design is ideal for operation in harsh field environments where weight and size constraint are important factors. Power is obtained from the notebook USB port saving precious transceiver battery power.

Easy to use software solutions for all products.

One Standard For All

You never know what's waiting at the other end of a 9-1-1 call. Choosing **Priority DispatchSM** products, training, and services means you'll be prepared to make critical decisions quickly and correctly, even when multiple agencies are involved. All of our products move seamlessly between police, fire, and medical, and when combined with our training and certification courses, even your newest dispatcher will be ready to handle calls with confidence and expertise—no matter what's waiting at the other end of the call.

Multi-Agency Integrated Products for Police, Fire & Medical:

- Dispatch Software
- Quality Improvement Software
- Dispatch and QI Training
- Cardsets
- Support Products

Personal Emergency Systems Protecting Life and Limb

NEW: Also in 450-470 MHz
available
(380-430 MHz standard)
ATEX & IECEx approved

TETRA

Future-proof: funkwerk TSS
The new Tetra Personal Security handsets
—with explosion proofing and integrated GPS

Universal: webnet
An incident management system
that offers scalability, freedom of
configuration and flexible interfacing

Proven: funkwerk DSS
DECT™ systems and handsets—with
explosion proofing and room-specific tracking.
New: funkwerk FC4 with colour display

funkwerk
security communications

Professional radio communication
with a high standard of security
combined with standard telephony
features in a single system.

- ▶ Fully integrated sensors to
activate automatic alarms on:
 - ▶ position
 - ▶ no-movement
 - ▶ time dependent
 - ▶ panic
 - ▶ tear-off
- ▶ Manual alarms via easy-to-reach
emergency button
- ▶ Precise localization with room
accuracy
- ▶ Professional messaging –
supporting
 - ▶ alarm diversion
 - ▶ evacuation scenarios

Designed for

- ▶ first responders
- ▶ prison guards
- ▶ guard services
- ▶ lone workers
- ▶ workers in hazardous areas

IMPROVE EFFICIENCY WITH THE DX-ALTUS

At Omnitronics our purpose is "to promote safe and efficient operations through electronic solutions." By choosing DX-Altus as your dispatch system, you can go a long way to improving your efficiency in a number of ways.

Operators can quickly complete their dispatch tasks using the user-friendly, easy to navigate, Alto dispatch console, reducing response times.

Production times can also be improved by providing fewer interruptions using digital radio features such as text messaging for non-urgent communications and individual calling.

Furthermore, multiple dispatch locations can easily be connected to the centralized DX-Altus system. This means that dispatch operators can be in the most convenient location and work can be shared or taken over as required. In addition, features such as hot swapping and soft degradation ensure no operator downtime.

Finally, diagnostics and reporting through protocols such as SNMP provide system managers and network administrators with real time system status, ensuring that the system operates at peak efficiency at all times.

Contact our sales team today to learn more.

**When all your
communications
are critical,
talk to us**

www.seapura.com

When operating in hazardous and challenging environments, having the very best equipment is essential. We continually work with our clients to develop, improve and adapt our radio communications equipment and software to meet every unique challenge they face.

Get in touch and find out why police, ambulance, fire and rescue forces, security organisations, utility and transport companies and governments around the globe put our name first when selecting a digital communications partner.

New *STI Field Test 7*

Drive Test Coverage Surveys / Indoor Building Verification

From RF field measurement to analysis and report, STI Field Test 7 is the most cost-effective and easy-to-use Drive Test measurement and coverage verification solution on the market today.

New Capabilities Include:
USA and Canadian Street Data

Project-25 RF Quality Testing

Analog Audio Quality Testing

STI Tile Compliance Testing

Narrowbanding RF Quality Testing
vs. Wideband RF Quality

Trunked, Simulcast, Conventional

Up-Link coverage tests from mobile

The first step
toward improving
system coverage
is to understand
current system
performance.

Insights into Spectrum Management

Spectrum belongs to every country as a natural and renewable resource. It is limited because of the demand by so many different sectors of industry, commercial business, education/academia, research and government. Most of us believe that frequencies will always be made available for two-way radio systems,

even if the spectrum takes a lot of time and justification to acquire. However, spectrum is becoming more limited and tougher to get.

In the regulatory world, when spectrum bands are being planned at the regional and global levels, everything is consensus-driven. It takes a long time, many technical discussions and negotiations to reach consensus. One must be patient.

Because spectrum planning is a 100 percent consensus process, everyone must compromise for agreements to be ratified; what you specifically want today may not ultimately be what you agree to. This process can happen in a regional open meeting, such as at the Asia-Pacific Telecommunity (APT), and in global open meetings, such as at the World Radiocommunications Congress (WRC). Eventually, progress is achieved when everyone has a little bit of what they want, and no one has a dominant position. Hence, when everyone is equally unhappy, success.

To speed up the process of discussion in meetings, everyone is given an equal voice to contribute and to air concerns. If no one says a word, it is taken by the chair of the meeting to indicate agreement and/or support.

Because the process begins at the regional and global levels, agreements made at these meetings flow upward eventually to the International

Telecommunication Union (ITU), where they are ultimately ratified. Once ratified by the ITU, the regulator in your country is bound by law to comply with the agreement. These agreements may impact you in unexpected ways. In an effort to not be surprised by new international policies, meet with your regulator often to track developments at the regional and global levels. Better still, participate in the meetings to make your voice heard and your needs known. Those who attend are the ones who eventually make the agreements that affect everyone.

Spectrum planning has a 20- to 25-year view, and once spectrum agreements are ratified, they remain in place for a long time. If end users are required to move from one frequency band to another, it is incredibly disruptive to their operations and expensive. All spectrum-planning participants understand and are sensitive to this fact, and as a result, take their time to make sure that what they do is right for everyone.

The dominant wireless technology going after as much spectrum as possible is the cellular industry, known by regulators as International Mobile Telecommunications (IMT), composed of operators/carriers and manufacturers. Cellular carriers serve the consumer market, which has a market size measured in billions of people. So private spectrum can be reallocated to IMT if the in-country demand is for IMT and no one fights for private spectrum. Remember, silence implies agreement or support.

Many end users blame regulators for the lack of frequencies for two-way radio or wireless data systems. Spectrum is highly limited, and the regulator's job amounts to horse trading and refereeing. The regulator must decide how to balance the spectrum

plans for all industries, services and applications, and they must do so while guaranteeing fairness and non-interference between all the parties involved.

Technology changes rapidly, and it is important to stay current on technology updates and new architectures and configurations that affect spectrum use. The regulators also must keep up to date with all of the technologies they manage, usually more than any end user. They must have a broad understanding of every technology that uses spectrum. Helping new regulators understand two-way radio technology and how it differs from cellular and paging technologies should be a priority.

In spectrum management, the regulators and wireless manufacturers are the most interested and involved parties because they want to harmonize on performance standards to keep costs low for end users. Without active end-user participation, regulators will do their best without that added knowledge. End users need to speak up or ensure that there is proper industry representation at the regulator meetings.

Government and public-safety users need dedicated spectrum for private Long Term Evolution (LTE) systems and narrowband digital two-way radio systems for managing disasters and major emergencies. If end users are not involved now to ensure that they have adequate spectrum, they will be limited in their future options. Contact your regulator and learn how you can get more involved so that you and your industry's interests are considered in long-term spectrum planning. ■

David Lum is the director of regulatory, product and support operations for the Asia/Pacific division at Motorola Solutions. Email feedback to david.lum@motorolasolutions.com.

Combine your strengths.

Telewave transmitter combiners save valuable tower space and eliminate interference with proven technology. As many as 14 transmitters can share the same antenna system, and dual-band configurations such as 700 / 800 MHz can be provided. Hybrid combining techniques allow very close channel spacing, even adjacent channels if required.

Telewave combiners are custom-built on any frequency between 30 MHz and 960 MHz, and are compatible with any narrow or wideband, analog or digital air interface including P25 Phase I and II. Duplexers, receiver multicouplers, preselectors, and power monitors can all share the same rack.

Contact Telewave today for more information about our full line of wireless infrastructure products, designed and manufactured in the USA.
