Interpretation of Retention Indices in Gas Chromatography for Establishing Structures of Isomeric Products of Alkylarenes Radical Chlorination

I. G. Zenkevich p. 270 abstract

By an example of previously uncharacterized products obtained by alkylarenes radical chlorination was demonstrated that combination of various interpretation methods applied to the retention indices (RI) in the gas chromatography on the standard nonpolar phases (comparison of RI of products and initial compounds, characteristics of succession of the chromatographic elution of the structural isomers with the use of estimation of molecular dynamic parameters, application of the additive schemes to RI calculation, and using of structural analogy $\text{CH}_3 \leftrightarrow \text{Cl}$ for testing the results obtained) permitted unambiguous identification of the structure even without data of mass spectrometry.

Reaction of Polyhalo Semiquinoid Structures Originating from 4-Aroyl(arylsulfonyl)oximino-2,5-cyclohexadiene-1-ones with Arylsulfinic Acids

A. P. Avdeenko and S. A. Zhukova p. 281 abstract

Synthesis of *N*-(2-Benzene-2,2-dichloroethylidene)-4-chlorobenzenesulfonamide and *N*-(2-Benzene-2,2-dichloroethylidene)-4-methylbenzenesulfonamide
