Editorial

Beginning with the first issue of Volume 16 (1981), a separate section of *Separation Science and Technology* will be devoted to the coverage of solvent extraction. We have enlisted the aid of two very capable editors to assist in making this section a viable, high-quality part of the publication. Researchers wishing to have manuscripts considered for inclusion in this section should send their manuscripts directly to one of the two editors: in Europe and nearby countries to Dr. James D. Navratil, International Atomic Energy Agency, P.O. Box 200, A-1400 Vienna, Austria; and in the United States and the rest of the world to Dr. E. Philip Horwitz, Chemistry Division, Argonne National Laboratory, Argonne, Illinois 60439. Publication style and format will be the same as that of other *Separation Science and Technology* papers.

Solvent extraction is one of the central fields of separation science and technology, and it deserves special coverage. More importantly, from a pragmatic point of view, solvent extraction has become increasingly important in recent years in the pages of *Separation Science and Technology*. For example, over 20% of all manuscripts published in the current year (1980) are related to solvent extraction. We therefore find it most appropriate to devote separate space and a special editorial team to this subject.
